NOTES:

1. With load change (NL to FL or FL to NL) and line voltage change (± 10%) combined.
2. Whichever is greater.
3. At full compliance voltage.
4. For 8 hours (after 30 min. warmup) with constant line, load and ambient temperature.
5. To return to a bandwidth of ± 10mV for a step load change of NL to FL or FL to NL.
6. Standard model has 105-125 Vac input. Models with M1 suffix (example SRL10-50 M1) have 190-230 Vac input. Models with M2 suffix (example SRL10-50 M2) have 210-250 Vac input.
7. Models SRL40-50 and SRL60-35 have 190-230 Vac input. Models SRL40-50 M2 and SRL60-35 M2 have 210-250 Vac input.
8. Voltage-mode constants are factory selected. They may be altered at rear terminal board.

Consult Factory for Prices. (603) 668-4500

SORENSEN POWER SUPPLIES

RACKS

POWER ASSEMBLIES

Sorensen rack assemblies offer a standard 19-inch width, two heights, three depths and are supplied both with and without slide adapters and with or without metering. Quarter-rack and full-rack metering schemes are available.

Any of Sorensen's modular power supplies may be inserted into single- or multiple-output rack systems. These modulars include the high-efficiency SSD & STM Series (60 models), the PTM's (singles and duals), and the high-performance QSA Series.

HIGH VOLTAGE POWER SUPPLIES

RACK MOUNTED • MODULAR • CUSTOM

for Commercial, Industrial, Military Applications

The Spellman line of rack mounted high voltage power supplies offers —

- Models through 400KV and 400 Watts
- Wide variety of options
- Fixed or reversible polarity
- Fully protected — "Arc-Proof"
- Current Limiting
- Low temperature coefficients

Spellman's line of high voltage power supply modules includes —

- Models through 30KV and 30 Watts
- Fully adjustable
- Super-regulated, Well-regulated, Regulated and Proportional Models
- Multiple Output CRT Supplies
- "Slot" units
- Excellent Regulation, Ripple and Transient response
- Militarized to MIL-E-5400

Standard Power Supplies

Choose the power supplies that set the standards for dependability and value.

SPECIFICATIONS*

Input: 115/230 VAC ±10%, 47 to 440 Hz. **Line Regulation:** ±0.1%. **Load Regulation:** ±0.1%, no load to full load. **Ripple:** 0.1%, typically 0.5 to 2mV rms. **Short Circuit Protection:** Fold-back current limiting, adjustable from 20% to full load. **Response Time:** 50 microsec. **Temperature Rating:** 0 to 50°C. (to 70°C with derating.) **Adjustable Voltage Range:** ±10%.

For other voltages, or special requirements, contact the factory. For specs and prices of additional models, consult the 1977 Standard Power Catalog.

Immediate delivery from over 70 distributor locations nationwide.

ISO-PAK™ The Miracle Module

The properly designed and applied DC/DC Converter will be the Miracle Module which will cause a troublesome circuit to work properly and reliably. Stevens-Arnold Converters have been designed with Reliability and ease of application as the foremost considerations. They will solve difficult system problems without creating new ones. Iso-Pak Converters increase Power Efficiency, reduce Size, eliminate Ground Loops and provide superb Isolation. Ask for our Catalog. We give complete information on Operating Specifications plus detailed graphs of such important Parameters as Temperature Coefficients, Efficiency vs. Load and Modular Surface Temperature Rise. We have nothing to hide and much to be proud of.

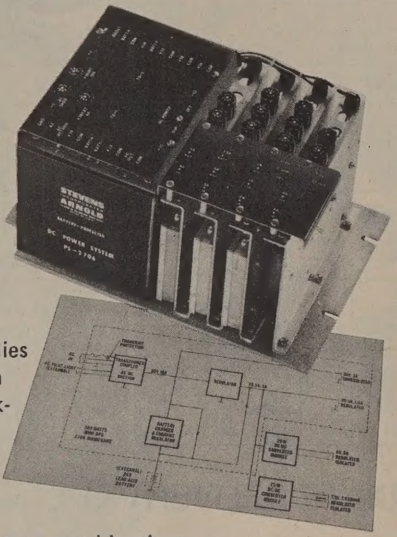
NEW



300VA UNINTERRUPTIBLE MINI-UPS POWER SUPPLY

Complete Mini-UPS system supplies all regulated DC voltages from an AC source using an external Back-Up Battery.
Model 2700 Mainframe has 3 Uncommitted DC/DC Converter Module slots to permit hundreds of user-selected DC output combinations.

FEATURES:

- Mainframe Prices start at $395
- Regulated DC outputs are tailored to your special requirements
- 100 Hour Burn-In
- Modular concept reduces field service costs

TAUBER ELECTRONICS FOR IMMEDIATE DELIVERY ON:

SEALED RECHARGEABLE BATTERIES

Gates®

Standard Cells and Batteries

OUTSTANDING BENEFITS:

HIGH VALUE. You get a high watt-hr. per dollar value because the materials used in Gates sealed lead-acid batteries are readily available and low in cost.

LONG SERVICE LIFE. You can get more than 600 deep discharge cycles . . . and even longer life when the battery is used as a standby . . . 8 to 10 years.

PACKAGING FLEXIBILITY. You get individual cell availability for broad flexibility in packaging, added flexibility because cells can be used in series or in parallel and may be operated, charged or stored in any position. You can select your choice of voltage and current.

EASY RECHARGE. You get the utmost versatility in the charging methods—constant voltage; modified constant voltage with tapering charge current; or constant current.

WIDE RANGE OF DISCHARGE RATES. You get the option of high discharge rates due to very low internal impedances — greater than 100 amps from the D cell and 200 amps from the X cell are possible for short periods of time.

WIDE TEMPERATURE RANGE FOR OPERATION. You get the option of discharging Gates batteries over a wide range of temperatures, the capacity being a function of both temperature and discharge rate.

SEALED CONSTRUCTION. You get individual cells in a sealed case that prevents acid, water and acid vapor leakage. The rugged metal case also maximizes resistance to shock and vibration.

LONG SHELF LIFE. You get an exceptionally low self-discharge rate.

SAFETY. You have virtually no problems with thermal runaway caused by overcharging.

TAUBER ELECTRONICS FOR IMMEDIATE DELIVERY ON:

ETERNACELL® LITHIUM PRIMARY BATTERIES

The lithium primary battery with organic electrolyte is the most significant improvement in battery technology in the past 25 years. Compared with all other primary battery types, the lithium system is markedly superior in every aspect of battery performance. The Power Conversion ETERNACELL is the first commercially available lithium primary battery.

OUTSTANDING FEATURES:

- 3.0 volts-per-cell nominal operating voltage (with adapter, single cell replaces 2 ordinary cells).
- Highest energy per unit weight and volume to 145WH-Hr./LB. 5-10 year shelf life
- Outstanding high and low-temperature performance–down to −65F and + up to +165F.
- 1/2AA, AA, C, 1-1/4C, D, 9V Transistor type to 30 A.H., . . . hermetically sealed cells available.

Whether you are designing military hardware, space vehicles, communication equipment or other high technology products, the components you select can mean the difference between success or failure in the final product. That's why more and more design engineers are finding the power converters they need in the Tecnetics catalog.

Tecnetics offers the broadest range of state of the art DC-DC power converters, and we are now extending our expertise into 400 Hz power supplies. We have been developing and refining these products since 1959, so that today each one is unsurpassed in terms of efficiency, reliability, control circuitry and documentation.

The nearly one-thousand products in our catalog give the design engineer a wide choice of options and features including:

• Efficiencies up to 86% • MTBF up to 40,000 hrs. • Single, dual and triple outputs • Remote error sensing • Densities up to 1.65 watts per cubic inch • EMI protection • Mil spec environmental protection • Short circuit and overload protection • Input-output isolation

Send for our catalog today. You're sure to find a stepping stone to your product's success.

Technipower was founded on the principle of providing the system engineer with a reliable, practical and economical alternative to expensive custom-built or laboratory type power supplies. The concept developed by Technipower to accomplish this objective is to assemble and package the highest quality parts and materials into a standard module. In this way, the system engineer can specify precision regulated power by selecting a single part number as he would a component. Costly software documentation and servicing logistics are kept to a minimum. No elaborate parts lists or expensive servicing manuals are required. ☐ From design through production, every stage in the making of power supplies is done in-house at the modern 203,000 square foot Benrus Corporation complex in Ridgefield, Connecticut. The comprehensive Technipower design/data catalog provides a large range of models from which the designer can select the exact power supply required. Complete details, including specifications, application data and model capabilities are provided. Our staff of expert power supply engineers is available to assist the equipment designer in catalog module modification or in custom designing.

All Technipower Power Modules Are Backed By A Full 5-Year Warranty

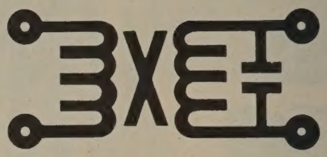
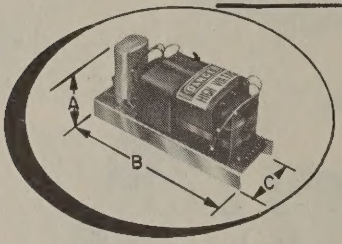
PARAFORMER® AC LINE CONDITIONERS

Transient-filtered line conditioning



- Attenuates noise; filters 50 db to 1 MHz
- ± 1.0% line regulation
- ±1.5% load regulation
- Bilateral filtering
- Inherent short circuit and overload protection

Tele-Dynamics Paraformer is a new and unique method of energy transfer which utilizes parametric coupling instead of magnetic coupling. This technique regulates and filters out noise, transients, and other unwanted spurious signals from AC lines, thus permitting optimum performance of end equipment.



PEC SERIES

Model	Dimensions (mm)		
	A	B	C
P-60	107.9	228.6	101.6
P-150	152.4	304.8	101.6
P-500	190.5	431.8	127.0
P-1000	190.5	431.8	260.3

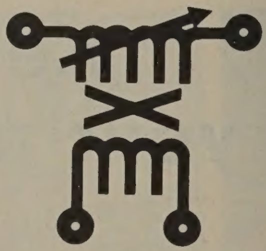
Model	Power (VA)	Weight (kg)	Fuse (amps)
P-60	60	5.4	4
P-150	150	16	4
P-500	500	27	10
P-1000	1000	54	20

SPECIFICATIONS

AC input: 198 to 242 volts, 1ϕ, 50 Hz
Ac output: See table of models
  Voltage: 220 ±4 volts, 1ϕ, 50 Hz
  Power: 60 to 1000 VA
Regulation:
  Line: ±1.0%
  Load: ±2.0%
Response time: Instantaneous
Power efficiency: 65%
Temperature: 0 to 55°C
Protection: Inherent overload and short circuit protection
Weight: See table of models, 5.4 to 54 kg
Controls: Start pushbutton (some models)

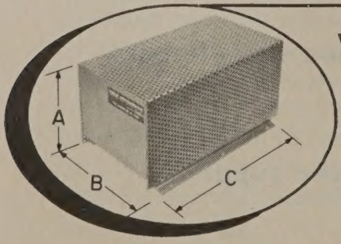
VARAX® AC LINE VOLTAGE REGULATORS

Solve brown-out problems



- Efficiency greater than 90% at full load
- High reliability; no semiconductors in AC path
- True rms regulation
- Insensitive to line frequency changes
- 1% Regulation, line and load

Varax employs a closed loop feedback system which utilizes the parametric energy concept to vary an inductor in series with the AC line. This increase or decrease in inductance permits control over wide ranges of line input fluctuations. This permits optimum performance of equipment under changing input conditions such as "brown-out", or in-plant line voltage variations.



VARAX® LR SERIES

Model	Dimensions (mm)		
	A	B	C
LR-504	177.8	212.7	342.9
LR-1504	177.8	212.7	342.9
LR-5004	449.3	482.6	254.0

SPECIFICATIONS

AC input: 180 to 250 volts, 50 Hz
AC output: 220 volts, 50 Hz
Output power:
  LR-504: 500 VA
  LR-1504: 1500 VA
  LR-5004: 5000 VA
Regulation:
  Line: ±1%
  Load: ±1%
Response time: 50 milliseconds
Power efficiency: Greater than 90%
Distortion: Less than 5%
Controls: Output voltage adjust ±3%
Operating temperature: 0 to 55°C
Weight:
  LR-504: 14 kg
  LR-1504: 22 kg
  LR-5004: 78 kg

DPS SERIES

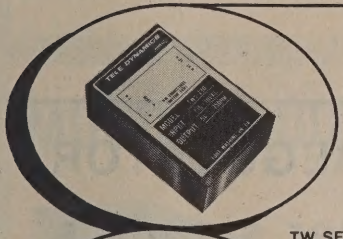
20 watt OEM supplies UL listed.

MODEL	INPUT VOLTAGE	DC OUTPUT
DPS-1	115 VAC	5/6V, 3/2.5A
DPS-2		12/15V, 1.5/1.2A
DPS-3		24V, 0.8A
DPS-8	220 VAC	5/6V, 3/2.5A
DPS-9		12/15V, 1.5/1.2A
DPS-10		24V, 0.8A
OVP-3	Overvoltage Protection (Option)	

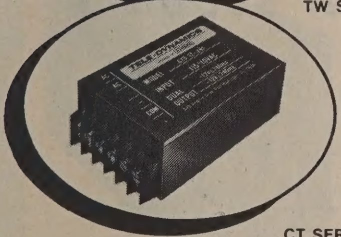
SPECIFICATIONS

AC input:
DPS-1, -2, -3: 105-125 volts AC, 1Φ, 57 to 63 Hz (derate 20% for 400 Hz operation)
DPS-8, -9, -10: 200-240 volts AC, 1Φ, 47 to 63 Hz
DC output: See table
Voltage: 5-6, 12-15, and 24 volts, floating
Regulation:
Line: ±0.25%
Load: ±0.25%
Ripple: 0.3% +10 mv rms max
Overload protection: Adjustable foldback current limiting
Overvoltage protection: Optional OVP-3
Controls: Output voltage adjust ±2%, nominal, (±10% with 20% derating). Current limit adjust
Temperature: 0 to 40° C (derate current 2%/° C over 40° C)
Weight: 1.9 pounds

TW/CT SERIES MINIATURE DC POWER SUPPLIES



TW SERIES



CT SERIES

The TW and CT series of miniature power supplies are rugged modular assemblies that provide well-regulated, reliable DC power. The TW supplies are designed for mounting to PC boards. Electrical connections can be made either with connector pins or by soldering. The CT supplies are intended for chassis mounting and each CT supply is equipped with a terminal block for electrical connections. All models have threaded inserts for securing the units to the mounting surface.

*With overvoltage protection. Overvoltage crowbar set to trip at 6.2 volts nominal.

Single, dual or triple output

GENERAL SPECIFICATIONS

Input voltage: 115 ±10 VAC
Input frequency: 50 to 400 Hz
Input isolation: 50 megohms
Output impedance: 0.2 ohms at 10 kHz
Output voltage setting: ±2% of rated voltage
Storage temperature: -25 to +85°C
Operating temperature: -25 to +71°C
Temperature coefficient: 0.02%/°C

Output current vs temperature: Each output is rated for full current at temperatures between -25° and +70°C with no derating.

CASE SIZES

1. 2 x 3 x 1
2. 1.75 x 2.25 x 1
3. 2.50 x 3.50 x 0.88
4. 2.50 x 3.50 x 1.25
5. 2.50 x 3.50 x 1.62
6. 2.50 x 3.50 x 1.88
7. 2.70 x 4 (plus 0.38 for terminal block) x 1.44
8. 2.70 x 4 (plus 0.38 for terminal block) x 2

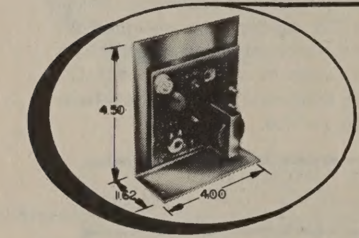
SPECIFICATIONS

Ac input: 105-125 volts AC, 1Φ, 47 to 63 Hz (derate output current 10% at 50 Hz.)
DC output: See table for models
Voltage: Adjustable 3.6 to 60 volts in four ranges, floating
Power: 30, 60, 120 watt models
Regulation:
Line: ±1%
Load: ±1%
Ripple: 0.1% +10 mv rms max
Controls: Output voltage adjust
Temperature: 0 to 45°C (to 65°C with 2%/°C derating from 45°C)



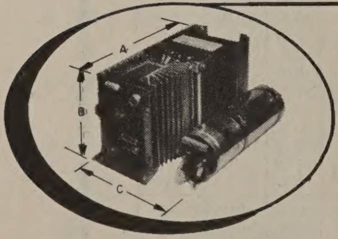
CVR-120 VOLTAGE REGULATOR
for use with DC power supplies

SPECIFICATIONS

AC input: 100-130 volts AC, 1Φ, 47-420 Hz
AC output:
Voltage: 135 volts peak ±10% (270 volts peak to peak)
Power: 120 VA
Regulation:
Line: ±1.0% for 10% line variations
Load: ±1.0%
Power factor: ±1.0% (+0.7 to -0.7)
Type: Peak clipping
Response time: 10-50 microseconds
Efficiency: 75% min. at nominal input voltage and full load

Temperature:
Operating range: 0 to 40°C (to 70°C with 2%/°C derating from 40°C)
Temperature coefficient: 0.025%/°C
Protection: Internal overcurrent protection
Weight: 10 oz.
Controls: Output voltage adjust ±10%
Phase shift: None

APPLICATION: Used as preregulator for electronic equipment.



BRUTE SERIES ADJUSTABLE DC POWER SUPPLIES
300, 600 and 1200 watt models

MODEL	DC OUTPUT
Brute I	5-50/2-25V. 6/12A
Brute II	5-50/2-25V. 12/24A
Brute III	5-50/2-25V. 25/50A
K1	Fine Voltage Adjust Kit (Option)
K2-I	Ripple Reduction Kit Brute I (Option)
K2-II	Ripple Reduction Kit Brute II (Option)
K2-III	Ripple Reduction Kit Brute III (Option)
K3	OVP-1 Overvoltage Protection (Option)

DIMENSIONS (IN.)

MODEL	A	B	C
BRUTE-I	11.00	6.750	7.650
BRUTE-II	12.00	6.750	7.650
BRUTE-III	14.00	10.00	11.120

- Greater than 75% efficiency
- Remote sensing
- Adjustable constant current operation 0-100%

SPECIFICATIONS

AC input: 105-130/210-260 volts AC, 1Φ, 47 to 63 Hz
DC output: See table for models
Voltage: Adjustable in two ranges, 5 to 50 volts or 2 to 25 volts (reconnectable)
Current: to 50 amperes
Regulation:
Line: ±0.1% or 50 mv
Load: ±0.1% or 50 mv
Ripple: 1% or 500 mv rms max
Overload protection: By adjustable current limiting
Overvoltage protection: Optional OVP-1
Controls: Current limit adjust 0 to 100%
Output voltage adjust 10 to 100%;
Ripple adjust
Temperature: 0 to 55°C with convection cooling
Weight: 300 watts-20 pounds; 600 watts-30 pounds; 1200 watts-50 pounds

SWITCHING POWER SUPPLIES

SINGLE OUTPUT SWITCHERS

SHOWN:
TRIO-750 W SWITCHER

Trio Single Output Switching Power Supplies are designed to provide maximum w/in³ in a compact self contained package. UL Recognized, all units are equipped with overload and overvoltage protection, voltage adjust., remote sense and can be paralleled.

With MTBF's of 30,000 hours and up, Trio Single Output Switchers are the obvious solution to your low voltage high current needs.

Power	Input	DC Out	I Out (Max)	Eff. (Typ.)	Size (Inches)
125 W	95–130 VAC / 188–256 VAC 45–440 HZ, SINGLE PHASE	TYPICAL: 2,5,6,12,20,24,28 VDC. (Other Voltages Available)	25a	65%	3.28 X 7.55 X 6.78
175 W	STRAPPABLE		35a	65%	4.75 X 4.25 X 11.0
300 W			60a	70%	4.93 X 5.5 X 12.0
500 W			100a	70%	4.93 X 5.5 X 16.0
600 W	95–130 VAC or 188–242 VAC, 45–60HZ SINGLE PHASE		120a	75%	5.0 X 8.0 X 11.0
750 W			150a	75%	5.0 X 8.0 X 11.0

MULTIPLE OUTPUT SWITCHERS

SHOWN:
TRIO-175 W SWITCHER

Trio Multiple Output Switchers are designed to provide all your power needs, logic, memory and/or accessories, in one box.

Standard features include UL recognition, overload and overvoltage protection, voltage adjust., ride through and remote sense.

Available with up to 4 outputs, Trio Multiple Output Switchers are the latest development in Switching technology and packaging.

Power	Input	Outputs	Typical VDC Out.	Efficiency	Size (Inches)

CUSTOM SWITCHERS

Trio custom switching power supplies run the gamut from slight modifications of our standard units to 1.25 KW three output supplies.

Trio's years of specializing in power supplies can save you time and money by making your custom requirement a modification of a Trio existing design.

RUGGEDIZED SWITCHERS

All Trio switching power supplies can be ruggedized to meet the environmental performance requirements of military specifications such as MIL E 16400.

This added feature at nominal cost allows you to satisfy most military requirements with a standard supply without incurring substantial NRE costs.

MILITARY SWITCHERS

Trio has been designing military power supplies for over 15 years with over 50,000 units in the field.

And Trio supplies have met the most stringent airborne, shipboard and groundbase specifications for sonar, radar, navigational, airborne and surface fire control and communications systems.

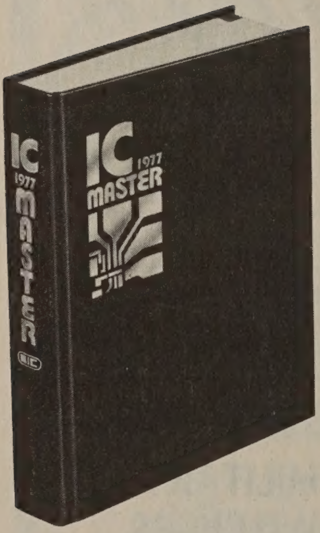
TRIO LABS *The Switcher Source®*

WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

United Technical Publications, 645 Stewart Ave., Garden City, NY 11530

Recommend The Right EVEREADY® Battery FOR THE RIGHT JOB!

"EVEREADY" BATTERY SYSTEMS AND THEIR PROMINENT FEATURES

...From the manufacturer of the most complete dry battery line in the world.

	FEATURES	APPLICATIONS
CARBON ZINC 915 950 935 216 732	Low cost, voltage drops gradually with use, variety of shapes and sizes ranging from 1.5 to 510 volts.	Radios, barricade flashers, telephone amplifiers, marine depth finders, toys, lighting systems, signaling circuits, novelties, flashlights, lanterns and fluorescent lights, cameras and flash guns, paging devices, laboratory instruments, alarm systems, remote controlled models.
HEAVY DUTY) **(Zinc Chloride)** 1215 1250 1235 1222 1209	Premium quality, extra life in heavy duty use, good shelf life, service life and resistance to leakage, good low temperature characteristics.	Flashlights and lanterns, transistor radios, cassette tape recorders and players, communications equipment, camera film drive, toys, pocket electronic calculators, other motor driven devices.
ALKALINE MANGANESE **Primary-Secondary** 522 E91 E93 E95 561	Good low temperature performance, voltage falls gradually with use, good shelf life, low impedance, 50 to 100 percent more energy than carbon-zinc batteries, high efficiency under continuous or heavy-duty high-drain conditions.	Radios, heated clothing, bicycle lights horns, shavers, electronic photoflash, lighting systems, movie cameras, radio-controlled models, model-plane ignition, toys, television sets, cassette tape recorders and players. Pocket electronic calculators, oceanographic instrument and buoys. Portable communication systems and smoke detector/alarms.
MINIATURE ALKALINE **Silver-Oxide)** **(Mercuric-Oxide,**  544 E132B E401	Constant voltage under discharge, long shelf life, high energy density per unit volume.	Electric / electronic / digital watches, hearing aids, reference voltage source, photoelectric exposure devices, instruments, wireless microphones, electronic thermometers, paging devices, walkie-talkies, test instruments, radiation detection.
NICKEL-CADMIUM RECHARGEABLE **(High rate and fast charge types)** CF225 CH150 CH450 CF1 CH2.2	High rate energy source, high cycle life and maintenance free, relatively constant discharge voltage, good high and low temperature characteristics, fast charge types, hermetically sealed rugged and dependable batteries, button cell stacks made to order, cylindrical cell batteries custom designed to your specifications.	Portable lawn and garden tools and appliances, shavers, toothbrushes, photoflash equipment, dictating machines, movie cameras, instruments, portable communication equipment, tape recorders, slide projectors, radios, television sets, blenders, pocket electronic calculators, alarm systems, office equipment.

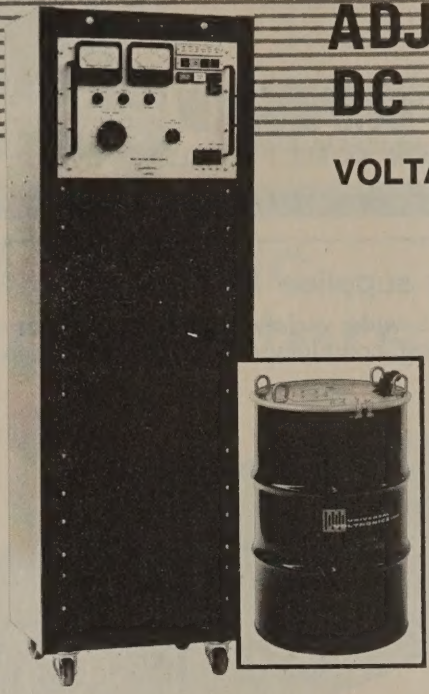
ADJUSTABLE HIGH VOLTAGE DC POWER SUPPLIES



BA 70-10 ADJUSTABLE HIGH VOLTAGE DC POWER SUPPLIES
BA 70-11 EXTRA HIGH VOLTAGE DC POWER SUPPLIES
BA 70-13 MULTI-RANGE, HIGH VOLTAGE POWER SUPPLIES
BPE 70-5 HIGH VOLTAGE DC POWER PACKS ENCAPSULATED
BPO 70-5 HIGH VOLTAGE DC POWER PACKS OIL IMMERSED

Series "BA" adjustable power supplies and series "BP" power packs are available at voltage ratings from 1 KVDC through 2000 KVDC at output power ratings from 1 watt to 250 kilowatts continuous. The adjustable series includes applications oriented control features and package design. The power pack series has many applications in OEM systems and for general laboratory use.

VOLTAGE RANGES TO 2,000,000 VOLTS DC

☐ **CONSERVATIVELY RATED — HIGH RELIABILITY**

Every UVC power supply includes conservatively rated high voltage components designed and manufactured under the strict control of the specialized UVC technical staff to insure continuous duty, long term, trouble free operation.

Each power supply offers a standard ripple specification of 5% maximum or better. Optional filters and attenuators are available for every UVC supply to reduce ripple to as low as .01% rms.

☐ **REVERSIBLE POLARITY**

Each power supply offers the flexibility of reversible output polarity performance.

☐ **FULLY SELF-PROTECTING**

Overvoltage and overcurrent protection features are available as both adjustable range and fixed value circuits. All access areas and doors are interlocked for personnel protection and all energy storage components and circuits are discharge protected for personnel protection.

☐ **"APPLICATIONS ORIENTED" CONTROLS OPTIONAL**

Rack mounted, floor and bench operable as well as portable design are among the packages available for UVC standard high voltage power supplies.

☐ **12-MONTHS WARRANTY**

A one year factory backed and field supported warranty policy accompanies each shipment.

HIGH VOLTAGE TERMINATIONS

C70-7 HIGH VOLTAGE TERMINATIONS

☐ **CORONA-FREE TERMINATIONS**
☐ **ELIMINATES THE HIGH STRESS POINTS**
☐ **MORE LINEAR DISTRIBUTION OF VOLTAGE GRADIENTS**

UVC high voltage terminations and connection links have been designed and fabricated specifically for use in high voltage applications requiring careful attention to terminal and connection problems • The standard terminations have been manufactured in a variety of geometrical configurations which have been chosen for their well-defined corona and leakage onset characteristics • Accurate machining and polishing, along with adequate theoretical and field experience on these terminals have given UVC the ability to advise on a particular size, shape or spacing for a particular application or site condition.

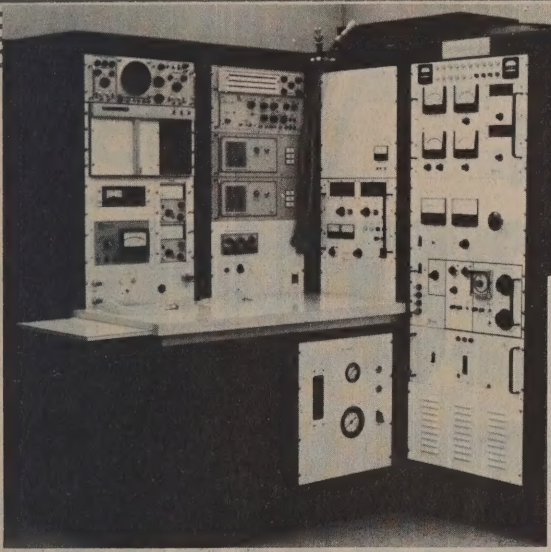
PRECISION REGULATED HIGH VOLTAGE DC POWER SUPPLIES



TWT/CFA POWER SUPPLY SYSTEMS

BRE 70-10 REGULATED HIGH VOLTAGE DC POWER SUPPLIES

Precisely regulated performance over wide adjustment range, low ripple, fast response and high stability enable the series "BRE" power supplies to be used in exacting work for X-Ray Spectroscopy, computerized tomography, electron microscopes, TWT's, ion bombardment experiments, particle separators.

☐ TWT/CFA POWER SUPPLY SYSTEMS

Available with Cathode, Heater, Collector, Anode and Helix outputs. Each UVC Black Box system features:

- **PULSED OR CW OPERATION**
- **TURN ON/OFF SEQUENCE CONTROL TO INSURE SAFE AND PROPER PERFORMANCE**
- **FAST-ACTING CROWBAR PROTECTION**

You can forget about power problems when you marry your TWT's to UVC Black Boxes.

☐ FROM 1KV THROUGH 500 KVDC

These precisely regulated power supplies are available in voltage ratings from 1 KV through 500 KVDC at continuous duty output power up to 100 KW. Our regulation circuitry techniques realize performance specifications which are virtually independent of input line variations or no load-full load changes.

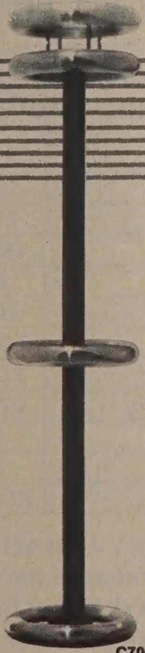
☐ LOW RIPPLE . . . HIGH STABILITY

Ripple in most cases is 0.01% rms and the output polarity is available as both fixed and reversible. Two voltage adjustment schemes are offered, namely digital dialable control for the most exacting applications and continuous coarse and vernier controls.

☐ WIDE ADJUSTMENT RANGE

In the digital dialable scheme, we allow for adjustment in increments of 10 KV, 1 KV, 100 volts, 10 volts, 1 volt and 0-1 volt vernier. This system provides the assurance that the actual output is always within 1% of the dial readings. As indicated you may select a coarse, and vernier voltage adjustment scheme and realize economic savings without sacrificing basic regulated performance. Regulation accuracy of ± 0.25%; ± 0.1%; ± 0.05% and ± 0.01% for line or load changes is available on most series "BRE" power supplies.

HIGH VOLTAGE DIVIDERS



C70-8 HIGH VOLTAGE DIVIDERS

UVC offers five types of voltage dividers for measurement of various types and shapes of high voltages. These include Resistive, Capacitive, Mixed (Resistive-Capacitive), Impulse Resistive, Impulse Capacitive. Selection of a voltage divider type depends upon the shape of measured voltage and the kind of information required.

These dividers may also be used for measurement and/or sensing of special high voltage transients. They are optimized in such a way as to drain a minimum of power from the voltage source and can be placed within close proximity to grounded objects without significant interferences on the divider ratio.

The low voltage components are enclosed in the bottom cylinder, which is made of steel for the purpose of shielding. The BNC connector for connections of instruments and the attenuating switch are mounted directly on the steel cylinder. High voltage components are enclosed in phenolic type cylinders. Specially designed high voltage terminals facilitate high voltage connections.

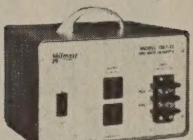
POWER CONVERSION EQUIPMENT

DC-TO-AC INVERTERS . . . UPS/STANDBY POWER

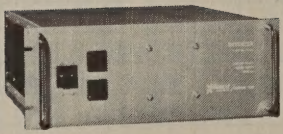


MODEL 1057 300-WATT STEPPED-WAVE INVERTER

Economically priced and ideally suited for instruments requiring frequency stability, the 300-watt Model 1057 is an inexpensive alternative to sine-wave power. The switching-mode wave-shaping technique yields a three-level-step waveshape which has approximately the same peak-to-rms voltage ratio as a true sine wave. Versions for input voltages of 12 Vdc, 24 Vdc, 28 Vdc and 32 Vdc are standard. Outputs of 115 Vac or 230 Vac and 50 Hz or 60 Hz are also standard. All models are more than 80% efficient and have a frequency stability of ±0.25%. Units are 8¼″h x 11″w x 8½″d and weigh 25 lbs. Single piece price is $295.00 for all versions. For more detailed specifications request Bulletin 9091C.

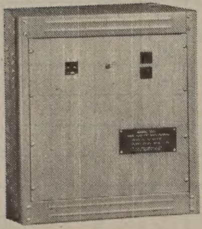
MODEL 1172 500-WATT SQUARE-WAVE INVERTER

The Model 1172 is an inexpensive, rugged 500-watt inverter designed to power heavy duty loads. The inverter will provide 1000 watts for a short period of time for surge-demanding loads such as refrigerator compressors and small power tools. The Model 1172 is a modular inverter and two units may be easily paralleled in the field for added continuous and surge power. Versions for input voltages of 12 Vdc, 24 Vdc and 32 Vdc are standard. Outputs of 115 Vac or 230 Vac and 50 Hz or 60 Hz are also standard. This square-wave-output inverter is more than 80% efficient for most of the output load range. The frequency stability is ±2 Hz and the output voltage is proportional to the input dc line. All units are 7″h x 8½″w x 11″d and weigh 32 lbs. The price of the twelve-volt-input version is $225.00, while the 24-V and 32-V versions are $280.00 each. For more detailed specifications request Bulletin 1101A.



MODEL 1081 500-WATT SINE-WAVE INVERTER

Designed to power those loads that are extremely wave-shape and frequency sensitive, the Model 1081 inverter offers a well-filtered sine wave with a frequency stability of ±0.25% and a voltage regulation of ±2% with line, load and temperature. Standard input voltages are 12 Vdc, 24 Vdc, 48 Vdc and 120 Vdc. The output for all versions is 115 Vac at 60 Hz. All units are for mounting in a standard 19″ rack and measure 6¾″h and 20½″d. All units weigh approximately 100 lbs. The single piece price for the Model 1081 is $995.00. For more detailed information request Bulletin 9091C.



OTHER STANDARD INVERTERS

Wilmore Electronics manufactures a complete line of solid-state inverters ranging in output power from 15 watts to 1500 watts. These units include highly efficient and economical square-wave-output units, units whose output wave shape is a three-level-step approximation to a sine wave and, for the most demanding loads, low-distortion sine wave output units. Pictured is the 1500 watt Model 1207, available in input voltages up to 120 Vdc, providing a frequency-stable, single-phase 60 Hz output at either 115 Vac or 230 Vac. All standard Wilmore inverters are protected against overloads and short circuits. For information about other standard inverters or about a custom-designed inverter to meet a particular requirement, please contact our sales department or our applications engineering group.

MODEL 1252 AUTOMATIC STANDBY AC POWER SOURCE

When commercial ac power fails, this standby ac power source continues to supply needed power to critical loads by switching to inverter operation. Upon restoration of ac power, the Model 1252 automatically returns to normal operation, and the internal battery charger recharges the batteries. Two basic versions are available, one providing a stepped-wave approximation to a sine wave output and 250 watts of power and the other supplying 500 watts of square-wave power. Standard battery input voltages are 12 Vdc and 24 Vdc. All units are 5¼″h x 17″w x 14″d and weigh 45 lbs. Single piece price is $525.00. Battery not included. For more detailed information request Bulletin 6021.

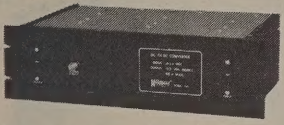
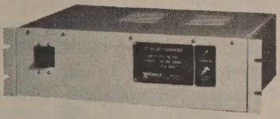
POWER CONVERSION EQUIPMENT

SINGLE- AND MULTIPLE-OUTPUT DC-TO-DC CONVERTERS



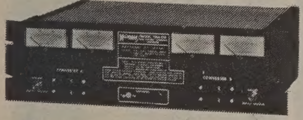
MODEL 1265 48-V AND 24-V TO 13-V DC-TO-DC CONVERTERS

The Model 1265, capable of delivering 420 watts, is a highly efficient, rugged converter which has been used in a variety of applications including that of providing power for mobile-radio base stations that are located where battery voltages other than 12 Vdc are available. The Model 1265 is particularly well-suited for applications in which extended periods of "standby" service are encountered because of the minimal no-load power required, less than 5 watts. These units are well regulated and fully protected and isolated. Units are 5¼"h x 19"w x 12"d and weigh 15 lbs. Price in quantity of ten is $470.00 each. For more detailed specifications request Bulletin 5061.



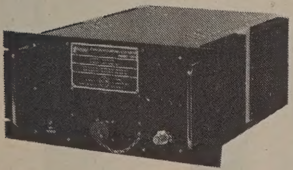
SERIES 1240 DC-TO-DC CONVERTERS

The Series 1240 converters are designed to take power from standard station batteries at 48V, 125V or 250V and convert to output voltages ranging from 24 Vdc to 125 Vdc. These converters are highly efficient up to 87% for some models, and are fully protected against large input transients as well as short circuits and overloads. Typical applications include uses within the utilities industries, with supervisory control systems and to power alarm and security systems. There are sixteen standard models with output power ranging from 240 watts to 600 watts. All models are 5¼"h x 19"w x 14"d and weigh approximately 40 lbs. Prices in quantity of ten begin at $580.00. For more information request Bulletin 4011.



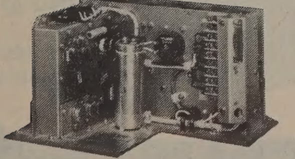
MULTIPLE-OUTPUT DC-TO-DC CONVERTERS

Wilmore specializes in both standard and custom multiple-output dc-to-dc converters. One example, pictured at the left, is a Series 1260 converter. This series accepts standard input voltages of 24V, 48V or 125V and offers dual, triple or quadruple outputs at all standard output voltages such as 5V, ±12V, ±15V, etc. The combined output power capability of this series is 250 watts, available in almost any combination of voltages and current levels. Standard enclosures are 5¼"h x 19"w for rack mounting, but the modular design allows for considerable flexibility in packaging. For information about these converters or other multiple-output converters, please contact our applications engineering department.



MODEL 1254 STANDARD CAPACITOR-CHARGING CONVERTER

Intended for use with lasers, flash lamps and other pulsed-load systems, these dc-input power converters are designed to charge energy-storage capacitors repetitively to a precisely regulated peak voltage. Special advantages of these converters include an overall efficiency of approximately 70%, a peak-voltage regulation precision of better than ±0.5%, and the ability to be used with essentially any size of load capacitor and with pulse-discharge repetition rates ranging from zero to several hundred pulses per second. There are three standard versions of the Model 1254 with energy delivery rates of 300, 600 and 1200 joules per second. The standard input voltage range is 20-32 Vdc and outputs are available in three standard ranges from 450 volts to 2800 volts. The Model 1254 units are intended for mounting in a standard 19" rack; smaller, lighter, higher-efficiency units are available for military (and similar) applications. The Model 1254-1200 (pictured at left) measures 8¾"h x 20"d and weighs 35 lbs. Single piece prices begin at $940.00 for the Model 1254-300. For additional information request Bulletin 6031.



CUSTOM-DESIGNED POWER CONDITIONING EQUIPMENT

Because user's needs tend to be highly individualized, the majority of Wilmore's manufacturing involves custom, rather than standard, units. Engineering charges for custom units are modest; turn-around times are exceedingly short. Especially if you are an OEM, a custom unit can probably save you money by ensuring that you get exactly what you want but no more, by ensuring that you have thermal and electronic safety margins where you need them, and by being carefully integrated in numerous other ways with the overall electrical and mechanical planning for your product. Wilmore's custom-designed converters are serving throughout the world in both industrial and aerospace applications. Uses range from spacecraft (LES-6, OSO, IMP, SAS, Pioneer 10 & 11 to name a few) to providing power conversion for the communications system for the Trans-Alaskan Pipeline. We would like to bring our cost-reducing problem-solving experience to bear on your problems.

ACDCo Power WHERE you need it!

Inverters-Uninterruptible Power Systems-Battery Chargers-Frequency Changers-Power Supplies

ACDCo Power Equipment is designed to meet high reliability and performance standards providing maximum life with minimum maintenance to protect all system circuits that require dependable, high quality power.

HARDWARE

Inverters, Power — DC to AC Output: Fixed-base, portable, mobile and marine.

ACDCo INVERTERS are used in one of the **roughest** of Marine Environments on the **U.S. Coast Guard's - Rescue Life Boats** to power their Navigation and Communication equipment.

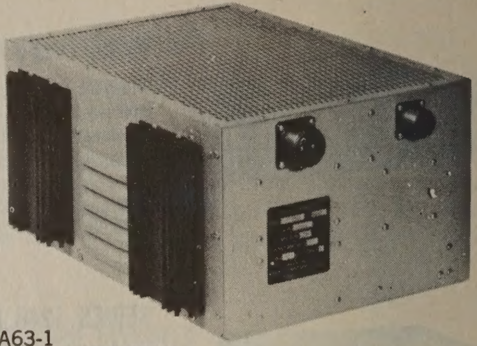
Uninterruptible AC Power Systems: 36 VA to 5 KVA.

Frequency Converters — AC to AC: 50/60 Hz, 60/50 Hz, 50/400 Hz and 60/400 Hz.

Battery Chargers — AC to DC Power Supply: 0-30 VDC/30-300 VDC Auctioneer Units and Automatic Transfer.

Power Supplies: Constant current and constant voltage current regulated and modular.

Power Monitors (AC & DC) & Fault Detectors: Special & custom power analizing, monitoring & recording systems, & controls.



A63-1
1 KVA INVERTER

TYPICAL SPECIFICATIONS

Input: ±15% from nominal.

Output: Sine wave, 120 Volts RMS, 60 Hz.

Voltage Regulation: 2% over full input and load range.

Frequency Regulation: 1% over full input and load range.

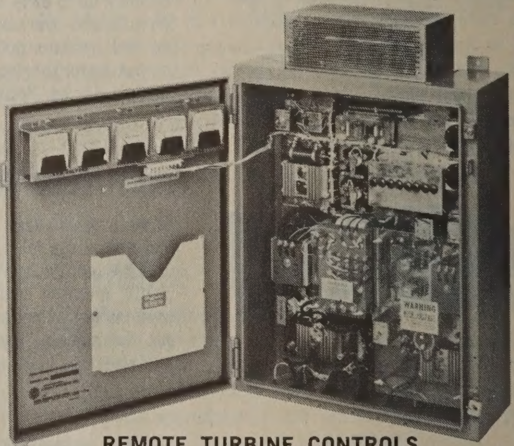
Power Factor: .9 Lead to .8 Lag.

Efficiency: Over 80% at nominal input.

Distortion: Less than 5%.

Overload: Within specifications for ONE MINUTE at 140% load.

Overload Protection: No damage from short to open circuit, reversal of input, or input voltage to 140% nominal.



REMOTE TURBINE CONTROLS FOR THE ALASKAN PIPELINE

DESIGN FEATURES

Ruggedized construction, no moving parts, completely solid state, easy servicing — sides fold down, plug-in transistors and I/C's on Printed Circuit Boards, all P/C boards plug-in removable.

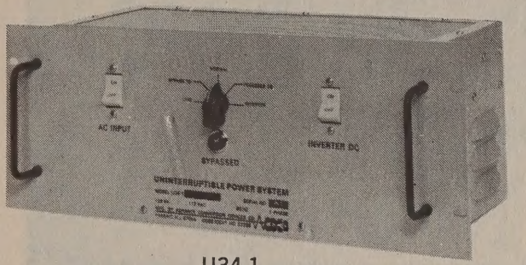
ACDCo Power WHEN you need it!

Protect Against Costly Power Interruptions

ACDCo Uninterruptible Power Systems protect critical circuits for computer peripherals, process controls, telephone switch boards, high risk medical or experimental procedures and all systems requiring dependable emergency power when normal AC is lost.



AC INPUT
BYPASSED
INVERTER DC
UNINTERRUPTIBLE POWER SYSTEM

U34-1

Typical UPS Model U34-1 is used to power a critical liquid hydrogen temperature control system at a major government research nuclear reactor.

UNINTERRUPTIBLE POWER SYSTEMS

Your margin of safety to insure continuous high quality power even in the event of any utility line or generator power fluctuation or failure. ACDCo's UPS systems are designed to provide full output capacity even under "brownout" conditions where voltage reductions as severe as 15% are encountered. The reserve (battery back-up) for power outages is not diminished by extended operation in brownout conditions.

The use of power transistors rather than SCR's in the inverter greatly reduces the susceptibility to transients which can be present on power lines due to faults, switchovers, lightning and other factors. These transients usually cause the problems that the UPS was intended to protect. If the inverter can malfunction as a result of the transient, then the expected protection is absent when it is most needed.

DESIGN FEATURES

- **Ruggedized construction**
- **Easy servicing**
- **Plug-in Transistors and I/C's**
- **Removable P/C Boards**
- **Optimized design to provide maximum value for the procurement dollar**

ALS has achieved major innovations in solid state power conversion techniques and power systems control. These accomplishments enable ALS to offer competitively priced frequency changers, inverters and uninterruptible power systems which embody the best characteristics of both solid state and rotating machine equipment without the performance and reliability limitations of either. Systems providing output capacities up to 1250 KVA and frequencies in the range of 45 to 450 Hz have been delivered.

In its SMG Series Frequency Changers, ALS has implemented a truly advanced and effective concept in solid state power conversion equipment. Immune to input power and output load conditions, these units are inherently dependable and totally self-protecting. Unlike ordinary units, the SMG Series will not be damaged or clear fuses despite line transients, loss of one or more input phases, output overload, short circuit or arbitrary operation of any control. Thermal and electrical stress of components is well below ratings. Power semiconductor devices in particular, are operated at less than 25% of ratings.

Most solid state systems produce less noise and vibration compared to their motor-generator predecessors. However, at 66 decibels, the SMG Series are the quietest units available.

Unquestionably, the SMG Series provides the optimum answer for most frequency changer requirements. However, should special requirements indicate the need for a unique design, ALS will welcome the opportunity to propose systems optimized to the application.

EXCLUSIVE FEATURES

Truly Quiet — Produces a tenth or less of the noise inherent in other solid state units. The SMG Series is ideal for applications where noise is undesirable.

Compact and Lightweight — By far, the smallest and lightest units produced. The SMG Series is unexcelled for portable or mobile applications.

Unprecedented Efficiency — At full load, dissipates a third or less of the power lost by competitive units at no load. Relative to other systems, the SMG Series will recover the purchase price in saved energy alone within seven years.

Convenient to Parallel — Any number of units may be paralleled to increase capacity or obtain redundancy. Conversion to parallel operation is accomplished simply by mating a single cable for each unit. No control manipulation is required and units may be energized or de-energized in any sequence.

Extremely Dependable — Carefully limited stressing of critical components assures years of trouble-free operation.

Total Protection — Immune to problems associated with input power, output overload or short circuit, and control manipulation.

Operational Simplicity — Controls and indicators are self-explanatory and logically grouped. Training of operating personnel is not required.

Reserve Capacity — Will support loads with high inrush demand. The SMG Series is particularly useful for motor loads or systems with capacitive filters.

Low Output Impedance — Has about one-fourth the open loop impedance of ordinary frequency changers. In applications involving nonlinear or dynamic loads, the SMG Series will out-perform other units of up to four times greater nameplate KVA ratings.

Fast Response — Following a 100% of rated current step change in load, the SMG Series will recover to the regulation band within two cycles of output. This, in combination with its low impedance, makes the SMG Series absolutely unbeatable for the most demanding stepped load applications.

Arbitrary Input Connection — Operates on any input phase rotation. The SMG Series eliminates concern for damage whenever the input source is changed.

SMG Series Solid State Frequency Changers 5 KVA to 300 KVA, 50/60 Hz or 400 Hz

SPECIFICATIONS

INPUT

Voltage: Available in all standard, domestic and foreign nominal voltages ±10% or per customer specifications. Frequency 45 to 450 Hz.

OUTPUT

Voltage: Available in all standard, domestic and foreign voltages or per customer specifications. Output adjustment is ±10% from nominal or optionally 0 to 110%. Regulation is ±0.5% for the combined effects of line, load and temperature.

Waveform: 2% THD at full load. 1% available optionally.

Current: Adjustable current limit from 25 to 125% of ratings. Manual current limit override allows over 150% of rating for motor starting. Regulation is ±1% for the combined effect of line, load and temperature.

Power Factor: Full rated power from 0.5 capacitive to 0.5 inductive.

Phase Displacement: 120° $\pm < 1°$ for balanced loads. Load may be 100% unbalanced. Line-to-line voltage will remain within ±1% from the average for each 10% of load unbalance.

Incidental Modulation: 0.025% peak FM and 0.025% to 1.0% peak AM depending on input power frequency and phase unbalance.

Response Time: ¼ cycle for 400 Hz 3 phase, 1 cycle for 50 Hz single phase.

Recovery Time: 2 cycles for 400 Hz 3 phase, 4 cycles for 50 Hz single phase.

Frequency: 50, 60 and 400 Hz adjustable ±5% are standard. Stability is ±0.1% constant environment, ±0.5% from cold start. Quartz time base with ±0.001%.

Instrumentation: All indications are accurate to ±2% of full scale. Provided are input/output voltmeter, ammeter, dial and pointer frequency meter.

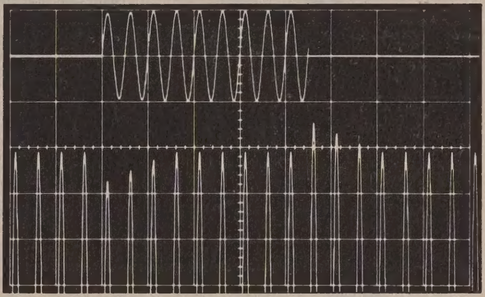
Status Lamps: Depending on model, 6 to 20 lamps indicate system operating status.

Protection: Combination of circuit breakers, fuses, sensing circuitry, air switches, thermostats and contactors positively protect the unit from fault loads, improper input voltages and consequential power train damage.

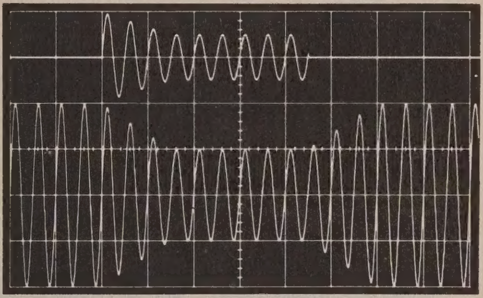
Environment: 0-50°C continuous, full ratings.

EMI

Shielded and filtered. Meets most EMI requirements. Optional filters for the most stringent requirements can be provided.



Dynamic Characteristics — The typical transient response and recovery characteristics of the SMG Series is shown. The upper trace is rated load current and the lower trace is output voltage expanded to 5% per division.



Automatic Voltage/Current Crossover — The typical crossover characteristics of the SMG Series is demonstrated by setting current limit at 50% of ratings and applying full rated load. For the first half cycle, full load current results. Thereafter the output voltage complies rapidly to half the initial value where the resulting load current is within the set 50% limit. Upon load removal, the output voltage returns to its initial value.

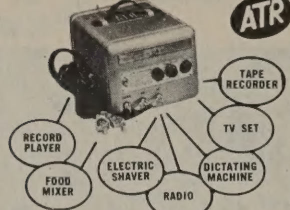
ALL ATR INVERTERS LISTED ARE FREQUENCY STABLE AND HAVE AUTOMATIC FREQUENCY CONTROL



DC TO AC UNIVERSAL INVERTERS

Frequency Stable with Automatic Frequency Control.

New, universal inverters for operating 110V, 60 cycle AC equipment from DC voltages in autos, buses, trucks, boats, trains, planes and DC districts. Designed especially for standard 110 VAC tape recorders, TV sets, radios, PA systems, electric razors, test equipment, etc. Units are carefully engineered and ruggedly constructed to provide long life operation. All feature complete RF interference suppression and exceptional frequency stability. Have operating efficiency in excess of 75%. Four-point voltage regulator corrects output voltage for minimum and maximum loads, and also helps compensate for input voltages lower or higher than normal. Inverters are recommended for use with loads having power factors in excess of 70%. Built-in toggle switch selects most efficient operation for use with TV sets or tape recorders. Inverters are not recommended for use with large motor driven appliances such as refrigerators, washing machines, etc. All have On-Off switches. Housed in attractive brown hammerloid metal cabinet with convenient leather carrying strap. Sizes: Standard Model RSF 8½x9⅞x5¼"; Heavy-Duty Model RHG, 6⅞x11¼x8½"; Extra-Heavy-Duty Model HSJ, 6½x12⅞x8½". With battery cables for instant connection to power source. Models with "P" suffix equipped with adapter cord for use in auto cigarette lighter receptacles.

*Recommended for 24V battery operation. **Before ordering, check wattage of equipment with which inverter will be used.**

PORTABLE PLUG-IN TYPE INVERTERS — DC TO AC

Frequency Stable with Automatic Frequency Control.

Specially Designed for Operating Standard AC Dictating Machines, Record Players, Incandescent Lamps, Electric Razors, Electronic Test Equipment, and other Small Electrical and Electronic Devices from DC Voltages in Automobiles, Buses, Trucks, Boats, Planes, Trains, and DC Districts.

Lightweight inverters for operating 110 VAC equipment from DC voltage sources. Feature excellent frequency stability and high efficiency. 12V units plug into cigarette lighter receptacle of any vehicle; others are equipped with standard 2-prong plugs. All are designed especially for use with dictating machines; record players, electric razors, test equipment, etc. Not recommended for large tape recorders and motor driven appliances such as refrigerators, washing machines, etc. Brown Hammerloid case with leather carrying strap. Sizes: DME, 5¼x4¾x2¾"; RME & RMF, 8⅜x8x3¾".

± SOLID STATE INVERTERS — DC TO AC

Frequency Stable with Automatic Frequency Control.

Specially Designed to Provide 117V 60 Cycle AC Power for the Operation of Tape Recorders, VTR Equipment, Public Address Systems, TV Sets, Ham Gear, Small Portable Tools and Appliances, Test Instruments, Closed Circuit TV, Scientific Laboratory and Hospital Equipment, Small AC-DC Universal Motors, Fluorescent and Incandescent Lamps from 12 VDC Storage Battery Power in Automobiles, Buses, Trucks, Campers, Motor Homes, Boats, and Aircraft.

ATR SOLID STATE Inverters are Universal Type Inverters recommended for the applications as listed above plus hundreds more! These Inverters are very well filtered and feature quick starting, frequency stability with varying load and input voltage, rugged heavy-duty construction, reverse polarity protection, and built-in power factor corrector utilizing a simple toggle switch. With ATR Inverters, the need for special equipment is eliminated. They are designed for quiet, long-life operation at high efficiency and maximum reliability. All models indicated here are equipped with heavy duty power transistors and plug-in oscillator for automatic frequency control. These Inverters also come equipped with four-point voltage regulators which make possible the correct output voltage for minimum to maximum loads and also help compensate for input voltages which are lower or higher than normal. The operating efficiency is approximately 80%. To figure approximate current consumption from storage battery, divide the rated input wattage of the load being operated by the storage battery voltage, and further divide this answer by .80 which will give the approximate current consumption from the battery based on the actual load being operated. These Inverters are recommended primarily for use with loads having power factors in excess of 70%. **Inverters come complete with battery cables ready for operation.**

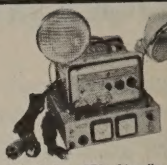
12U-S9M	12	117	1000	900	37	**369.75**

*"-P" model is equipped with cigarette lighter cord set to plug into dash receptacle. Caution — Do not load beyond 150 watts due to possible damage to cigarette receptacle wiring.
±Inverters equipped with Solid State Oscillator.

Dimensions of Model 12U-S3A, 11x9x4". Dimensions of Model 12U-S5G, 11x9¾x5¼". Dimensions of Model 12U-S6M or 12U-S9M, 11x11¼x6¾".

All ATR Inverters are housed in attractively finished brown-hammerloid metal cabinets and are complete with battery cables ready for operation.

Note Carefully: ATR Inverters are not recommended for the operation of refrigerators, washing machines, or similar motor-driven appliances; also, ATR Inverters are not recommended for operating toasters, electric irons, sun lamps, or similar appliances of high wattage or low power factor. Any attempt to use the Inverter for applications not recommended will ruin the Inverter immediately and void the guarantee.



STANDBY POWER SYSTEMS FOR EMERGENCY LIGHTING AND POWER

Illustrates ATR Standby Power System complete with lamps, automatic crossover, and battery charger.
Completely Automatic Standby Power Units specially designed to permit the instantaneous continued operation of critical lighting equipment, PA systems, amplifiers, intercom systems, burglar alarms, fire alarms, synchronous electric clocks, electric time and recording clocks, incubators, gas valves, telephone and test equipment, and similar critical devices in the event of 115 volt AC commercial power line failure. For use: In hospitals, banks, hotels, theatres, factories, office buildings, schools, homes and other areas of operation.

Type	Storage Battery Input (Volts)	AC Output 60 Cyc. (Volts)	Output Wattage Int.	Output Wattage Cont.	Shipping Wt. (lbs.)	Net Price Without Lamps

†Solid State type. ‡Vibrator type.
For Units with Lamps add **$49.61** additional Net.

All Models designated above **are housed in** attractively finished brown-hammerloid metal cabinets. Dimensions of all Models **without lamps** are as follows: ETS, 11"Wx11¾"Dx9"H; ETH, 11"Wx11¾"Dx11"H; ETJ, 11"Wx13"Dx12½"H; S3A, 11"Wx11¾"Dx7¾"H; S5G, 11"Wx11¾"Dx9"H; S6M, 11"Wx11¾"Dx11"H. For units with Lamps, change W to 16" and add 7½" to H; also increase shipping weight by 5 lbs.

SHAV-PAKS

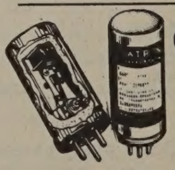
Every man should have this lightweight ATR Inverter in his car for that "Keep Clean-Shaved Look." Will operate standard AC electric shavers and other small electrical devices from your car or boat. Complete with 3 ft. cord set. Plugs into cigarette lighter receptacle. Fuse protected, rugged construction, and attractively housed in grey hammerloid-finish steel case. Input: 12 VDC. Output: 110 VAC. 60 cycles, 15-25 watts. Size: 4x2⅝x2¾". Ship. wt., 2½ lbs.

Model 12-SPB .... Net **$22.75**

BATTERY ELIMINATOR & CHARGER

For Demonstrating and Testing Transistor or Vibrator-Type Auto Radios. Ideal as a Power Supply for Model Railroad Trains, Radio Sets, Electro Plating Outfits, and other 6 or 12 VDC Equipment. May also be used as a Battery Charger. Designed for testing DC electrical apparatus on regular 110 VAC lines — equipped with full-wave solid state rectifier, assuring noiseless, interference-free operation. Fully automatic and fool-proof; has voltmeter, ammeter, and 8-position voltage control. Fuse protected and housed in heavy gauge brown hammerloid-finish metal case. 6 ft. cord set included. Size: Model 610C-ELIF, 6½x8⅛x8½", ship. wt., 22 lbs.; Model 620C-ELIT, 6½x12⅞x8½", ship. wt., 33 lbs.

Model 610C-ELIF (6 volt at 10 amps or 12 volt at 6 amps) .... Net **$90.75**
Model 620C-ELIT (6 volt at 20 amps or 12 volt at 10 amps) .... Net **120.70**



VIBRATORS

For All Auto Radio Sets Since 1954 Use One of the ATR Vibrators Listed Below.

ATR Vibrators Feature:
Ceramic Stack Spacers with two-bolt stack construction.
Instant Starting—as a result of highly efficient magnetic circuit with formed base for more uniform operation on both high and low voltages.
Large Oversize Tungsten Contacts having Full Wiping Action — for greater reliability and longer life.
Perforated Reed of Highest Quality Swedish Spring Steel.
Highest Precision Construction and Workmanship.

Ship. Wt., ½ lb.

ATR No. 1400 (Bulk), 4 Prong, 6 Volt.	Net **$5.95**
ATR No. 1843 (Bulk), 3 Prong, 12 Volt.	Net **5.95**
ATR No. 1840 (Bulk), 4 Prong, 12 Volt.	Net **5.95**

Vibrators: ATR manufactures many different styles and types of light-duty and heavy-duty vibrators. If you have a requirement, give all available information including manufacturer and vibrator type number and then request availability and price information.

BIOMETRICS INSTRUMENT CORP.

a subsidiary of **VARO INC.**

STATIC POWER CONVERSION EQUIPMENT

Biometrics Instrument Corporation, a subsidiary of Varo, Inc., has an unusual variety of expertise in the design of highly specialized power conversion equipment. Since 1946, Varo has continually advanced the development of more reliable, smaller, lighter, and more versatile power conversion equipment to meet exacting specifications for widely varied military applications and environments.

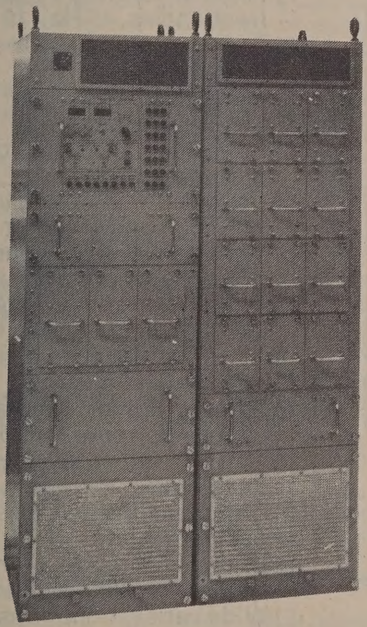
Three major product areas are addressed by Biometrics —

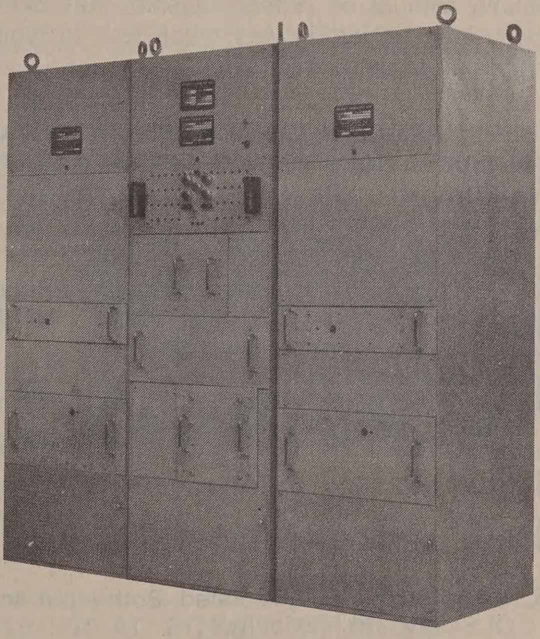
SHIPBOARD POWER SYSTEMS
including
- INVERTERS
- CONVERTERS
- FREQUENCY CHANGERS

HIGH VOLTAGE POWER SUPPLIES
including
- IMAGE CONVERTER POWER SUPPLIES
- IMAGE INTENSIFIER POWER SUPPLIES
- SPECIAL PURPOSE POWER SUPPLIES

AIRBORNE POWER SYSTEMS
including
- INVERTERS
- CONVERTERS
- POWER SUPPLIES

Biometrics has specialized for many years in the design, development and production of ruggedized shipboard power conversion equipment. Most equipment is designed and qualified to meet the shock and vibration requirements of MIL-S-901 and MIL-STD-167. New equipment currently under development utilizes the STANDARD ELECTRONIC MODULE (SEM) concept for increased maintainability and reliability considerations. Illustrated below are just two of the many units under development at Varo.





The Varo Model 4406, 10KW Static Inverter is being developed for operation from an ungrounded submarine DC source. It is capable of parallel operation with remote start-up, shutdown and load transfer. It will provide 200 percent (200%) of rated current for three (3) minutes into a fault and sustain an overload of 125 percent (125%) for one hour.

The following parameters illustrate the Model 4406 static inverter's salient performance features:

Input - - -	180-355 VDC
Output - - -	120 VAC, 3-phase, 3-wire, 400 Hz
Rating - - -	12.5KVA @ .8 lag. p.f.
Regulation - -	±0.5%
Efficiency - -	〉80%
Distortion - -	3.0%
Maintainability -	Plug-in drawers
Parallel Operation	Up to three (3) units
Logic - - -	Standard Electronic Modules (SEM)

Varo is in the process of developing a Family of Frequency Changers designed for shipboard use. They are being developed to convert Type I power to Type III power (60 Hz to 400 Hz). The 60KW unit (Varo Model 4412) pictured above represents one unit of a Family of Frequency Changers ranging from 10KW to 250KW. They use common interchangeable modules for improved logistic and maintenance.

A summary of general performance characteristics for the Family of Frequency Changer system is as follows:

Input - - -	450 VAC, 3-phase, 60 Hz
Output - - -	450 VAC, 3-phase, 3-wire, 400 Hz
Ratings - - -	10KW, 16KW, 25KW, 40KW, 60KW, 100KW, 160KW, 250KW
Regulation - -	±0.5%
Efficiency - -	〉80%
Distortion - -	3.0%
Parallel Operation	Parallable between ratings
Logic - - -	Standard Electronic Modules (SEM)

A.C. POWER

FROM THE A.C. POWER SUPPLY PROBLEM SOLVERS
STANDARDS ■ SPECIALS ■ CUSTOM

A.C. POWER SUPPLY RATING COMPARISONS

The methods used in arriving at the ratings of A.C. Power Supplies vary greatly from manufacturer to manufacturer. There are no standards existing for the purpose of quick and valid comparisons and a certain amount of "Specsmanship" has been the result. This can easily lead to getting very much less for your power supply dollar than you are entitled to.

THERE ARE SIX MAJOR AND VERY IMPORTANT CONSIDERATIONS TO TAKE INTO ACCOUNT WHEN LOOKING INTO THE NAMEPLATE RATINGS OF A.C. POWER SUPPLIES. THEY ARE:

1. The Output Power or Voltampere (VA) Rating.
2. The Output Current Rating.
3. The Effect On The Supply Of Loads Having High Inrush or High Peak Recurrent Currents.
4. How The Ratings Are Affected By Low Input Line Voltages.
5. How The Ratings Are Affected By Low Power Factor Loads.
6. Is The Supply Fully Isolated, Both Input and Output, For Reasons Of Safety and Flexibility?

Please Contact Us For Additional Information Concerning A.C. Power Supply Rating Comparisons.

- ☐ Single, two and three phase outputs
- ☐ Up to 5000 VA per phase in 144 standard models
- ☐ Fixed or variable output frequencies, 45 Hz - 10 kHz
- ☐ Tight regulation vs. line and load changes
- ☐ Instant response time
- ☐ Low output distortion
- ☐ Full rated output into loads of any power factor
- ☐ Up to 150% of rated output with high power factor loads
- ☐ Instantaneous overload protection, automatic recovery
- ☐ Complete transformer-coupled isolation, input and output
- ☐ All silicon solid state, entirely new circuit concepts
- ☐ Smaller, lighter, simpler, less expensive, more reliable
- ☐ Can be used as linear power amplifier
- ☐ Complete line of plug-in oscillators
- ☐ Digital LED readout for frequency, volts and amperes
- ☐ Wide variety of options available

SPECIFICATIONS

INPUT VOLTAGE: 115 VAC ± 10%, single phase. Units up to 750 VA output.

115/230 VAC ± 10%, single phase. 1000 to 1500 VA output. Three phase inputs available.

120/208 or 230 VAC ± 10%, three phase. Units over 1500 VA output.

INPUT FREQUENCY: 48-72 Hz

EFFICIENCY: 50-70%, depending on operating conditions.

Various input voltage, frequency and power options are available, many at no extra charge.

OUTPUT VOLTAGE: 0-130 for single phase and 0-130 line to neutral for 2 or 3 phase units. Other ranges or combinations of ranges available.

LOAD REGULATION: ± 0.5%. No load to full load. Adjustable through zero for specific loads.

LINE REGULATION: ± 0.1% for ± 10% line change.

POWER FACTOR: Full rated VA into any power factor load down to zero, lead or lag.

DISTORTION: 0.5% max. harmonic distortion at frequency extremes. Less at mid-band.

OVERLOAD AND FAULT PROTECTION: Instantaneous, automatic recovery short circuit and overload protection. Fast acting main circuit breaker and fuses for fault protection.

METERING: Output voltmeter. Digital readout optional.

EXTERNAL INPUT: Via optional plug-in. 9 volts RMS. 15K ohms input impedance.

OPERATING TEMPERATURE: 0° to 55°C.

FRONT PANEL COLOR: Dark grey, white lettering.

Some of the special options available include input power types, output voltage ranges or combinations of ranges, metering, digital LED readout for frequency, volts, amperes and phase angle, higher and lower frequency outputs, higher and lower power outputs, physical configurations, paint colors, tighter regulation specifications, single to multi-phase output switching, etc. Completely special or custom units providing solutions to virtually any A.C. power supply problem can be furnished.

10/500 SERIES

The 10/500 series of AC Power Supplies are linear power amplifiers driven by plug-in oscillators. Fixed and variable frequency oscillators, with frequency accuracies to 0.001% and 0.1%, respectively, are available in a wide variety of standard models. An almost unlimited variety of oscillators with various degrees of accuracy and many special features can be provided.

For single phase power output a power amplifier is driven by a single phase oscillator. Two separate power amplifiers driven by a two phase oscillator and three separate power amplifiers driven by a three phase oscillator are used to provide two and three phase power outputs. Units are available capable of providing a choice of single or multi-phase output by means of a front panel mode selector switch.

The output power is transformer coupled and completely isolated. It can be left floating or one side grounded.

Line input to these units is via very advanced isolating magnetics.

These power supplies are capable of providing continuous full-rated volt-ampere output under worst case conditions, i.e., zero power factor loads either leading or lagging, 10% low line and output voltage at 75% of maximum. With unity power factor loads, nominal line and maximum output voltage, continuous duty at 150% of rating is permissible. The graph outlined below shows maximum power output for various conditions of load power factor output voltage, line voltage and ambient temperature. Even though these power supplies are rated under worst case conditions and in addition have a 50% overload capability they are nevertheless smaller, lighter and less expensive than other supplies whose ratings have been derived under considerably more favorable operating conditions.

Complete overload, short circuit and fault protection is provided by a combination of an instantaneous, automatic-recovery electronic protector plus a fast acting main circuit breaker.

Digital readouts with LED's now available as an optional feature on all Behlman Engineering Corporation A.C. Power Sources, Plug-In Oscillators and UPS. The digital display of Volts, Amperes, Frequency in hertz and Phase Angle in degrees may be obtained. Please call or write for additional details.

The graph to the right relates output power limits, expressed as a percentage of rated output, to various conditions of output voltage, load power factor, line voltage, ambient temperature and proximity to minimum frequency ratings.

The output voltages shown are the three most popular ranges. Other voltage ranges are comparable on a pro-rata basis.

An important advantage, inherent in Behlman Engineering Corp. A.C. Power Sources, lies in the availability of power amplifiers in four separate output frequency ranges. The narrow band power supplies effect cost and weight savings that add to the already existing size, weight and cost advantages of our full frequency models.

Many AC power supplies require derating to half power in the 5 kHz to 10 kHz range. This derating is not required with the Behlman Engineering 10/500 series.

This graph carries an important message: Don't buy an AC power supply without knowing how its ratings were determined.

*Also available with 3-phase Scott T output. Add "T" after "2" in model no. For example: 2T-35-.

SERIES OSC PLUG-IN OSCILLATORS

The OSC series oscillators are designed to plug into the front panel of all Behlman Engineering Corporation AC Power Supplies. They are available in a wide variety of fixed and variable frequency outputs. Single, two and three phase models provide suitable drive signals for multi-phase supplies. These oscillators readily synchronize with external signals. In addition to the standard units shown below virtually any combination of fixed or variable frequencies to any practical degree of accuracy can be provided. Many special features, including provisions for external sync or drive, can be supplied.

FIXED FREQUENCY	MODEL	FREQUENCY ACCURACY

UNINTERRUPTIBLE A.C. POWER SOURCES

The UPS-10/500 Series of uninterruptible A.C. power sources are available in the same basic sizes and power ratings as the Series 10/500 standard line of A.C. Power Supplies. Battery back-up power can be furnished by a variety of gelled or liquid electrolyte storage batteries. The lower powered units (100-350 VA) can be furnished with built-in gelled electrolyte batteries.

The photograph illustrates a Model UPS-25 with an output power capability of 250 VA and a self-contained battery pack for 15 minutes of standby operation.

All of the UPS units include a battery charger, electromechanical or solid state bypass switch, appropriate indicating lights and power line failure alarm provisions. The output frequency of the UPS is phase locked to the input power line frequency under conditions of normal operation. In the event the A.C. power line fails, the UPS continues to furnish the load with A.C. power by operating from the battery bank. The output frequency of the UPS is then determined by the highly stable internal oscillator. During normal operation the load is supplied with power from the output of the UPS. Therefore, there is no switch overtime involved if input power is interrupted.

Battery banks can be furnished for relay rack mounting or to the customer's specific requirements. Battery interconnect cables are provided with all standard UPS configurations. Please call or write for additional details.

**Add 3.5″ for all -SS models

PROGRAMMABLE A.C. POWER SOURCES

The entire Series 10/500 A.C. Power Supplies are available with programmable plug-in oscillators. These units may be programmed for output voltage level, frequency or phase angle/s. Any or all of the above functions may be incorporated into a single plug-in oscillator.

All of the generally accepted methods of programming can be used with these units. This includes resistance and voltage programming as well as digital programming with either binary or BCD format from computers, micro-processors, keyboards, punched tape or key punched cards.

Manual local control over voltage, frequency or phase angle can be provided on the front panel of the plug-in oscillator in the form of multi-turn potentiometers. Selection of either local or automatic remote control is an optional feature. A digital readout display mounted on the main front panel of the A.C. Power Supply can be provided to display the functions outlined above. The selection of the desired function to be displayed (Voltage, Frequency or Phase Angle) may be made by either local manual control or remote control.

These programmable A.C. Power Supplies can greatly simplify the design of automatic checkout systems, simulation of A.C. power line anomalies, environmental testing, automatic production testing, etc.

Please call or write for more details. Your inquiries will receive prompt attention.

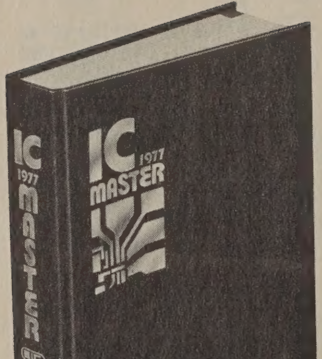
THE A.C. POWER SUPPLY PROBLEM SOLVERS

DO YOU HAVE A SPECIAL AC PROBLEM?

- Behlman Engineering versatility can solve it.
- A great variety of options provide solutions to many special requirements.
- Completely special or custom units or systems can be provided.

WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

United Technical Publications, 645 Stewart Ave., Garden City, NY 11530

BULOVA® Inverters and Frequency Changers

Features:

- Up to 500—VA Output
- Fully Regulated Sine Wave
- All Solid-State
- Protected Input/Output

Performance Specifications:

OUTPUT:

Frequency Output: 50 or 60 Hz, standard; other specific frequency, custom

Frequency Regulation: ±1%, ±.1%, ±.015%, ±.005% or better.

Temperature Range: 0° C to + 50° C

Wave Shape: Sine Wave, 3% Distortion max.

Output Voltage: 115 or 230V AC nominal

Voltage Regulation: ± 1% any combination of full line and load change

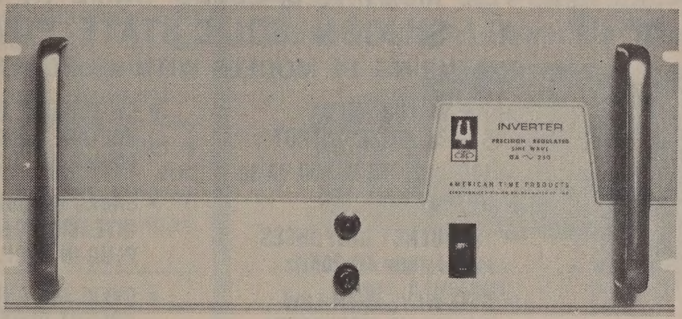
INPUT:

115V AC or 230V AC, ±10%, 45 to 65 Hz; or 22 to 30V DC

Applications:

Ideally suited for synchronous motor drives, chronographs, stroboscopes, generator frequency control; running timers, clock and time-of-day systems, tape recorders, general laboratory use.

INVERTERS

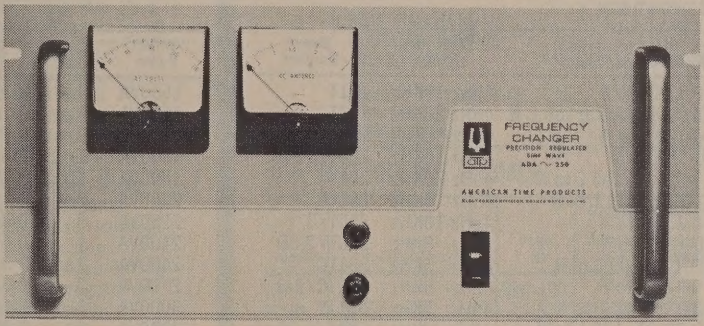


(Meters optional)

Model	Input VDC	Output VA	Output Freq. Hz	Output Volt	Wt. Lbs. (2)	Dimensions (For 19" Rack) H	Dimensions (For 19" Rack) D
DA-100S	22-30	100	50 or 60	115(1)	65	5¼"	13"
DA-250S	22-30	250	50 or 60	115(1)	70	8¾"	13"
DA-500S	22-30	500	50 or 60	115(1)	130	10½"	15"

(1) 230 Volt Available (2) For 50 Hz, add about 5 lbs.

FREQUENCY CHANGERS



(Meters optional)

Model	Input VAC. ±10%	Input Freq. Hz	Output VA	Output Freq. Hz	Output Volt	Wt. Lbs. (2)	Dimensions (For 19" Rack) H	Dimensions (For 19" Rack) D
ADA-100S	115/230	45-65	100	50 or 60	115	75	5¼"	13"
ADA-250S	115/230	45-65	250	50 or 60	115 (1)	80	8¾"	13"
ADA-500S	115/230	45-65	500	50 or 60	115	130	10½"	15"

(1) 230 Volt Available (2) For 50 Hz, add about 5 lbs.

5VA INVERTER — PRECISION FREQUENCY

Model DA5S

Standard 115 V 60 Hz, available at any fixed frequency from 50 to 400 Hz

- Accuracy to ±.0002%
- Sine Wave, max. THD 5%
- Input 28V DC ± 4V

Size: 4½" x 5" x 3¼"
Weight: 3 lbs. approx.

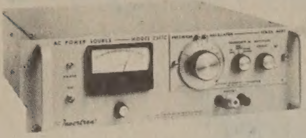
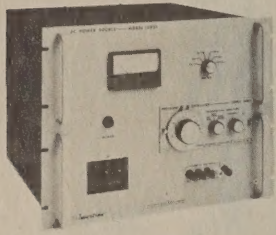
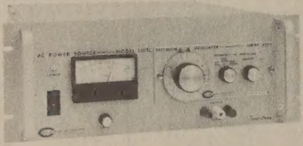
AC POWER SOURCES



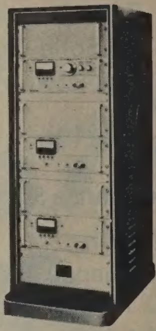




SOLID STATE *Invertron*®

THE MOST RESPECTED NAME IN AC POWER
ALL-SILICON SOLID-STATE POWER SOURCES
FEATURING 14 MODELS WITH 48 POWER LEVELS

- 100 VA TO 6000 VA SINGLE-PHASE OUTPUT
- 100 VA 2ϕ TO 18,000 VA 3ϕ OUTPUT
- FREQUENCY RESPONSES FROM 45Hz TO 20KHz
- SINE-WAVE WITH LOW HARMONIC DISTORTION
- EXCELLENT LINE AND LOAD REGULATION TO .01%
- SWITCHABLE OUTPUT VOLTAGE RANGES FOR FULL POWER AT LOWER VOLTAGES
- BROAD CHOICE OF INTERCHANGEABLE PLUG-IN OSCILLATORS
- OVERLOAD AND SHORT-CIRCUIT PROTECTION
- OPTIONAL INPUT VOLTAGES: 117 V 1ϕ TO 460 V 3ϕ



Invertrons® have earned world-wide respect through their versatility, reliability, and outstanding performance. In addition to low distortion, high input stability and high power density, these silicon solid-state AC power sources use plug-in oscillators as frequency-determining elements and can be stacked electrically to provide one-, two-, or three-phase power. All Invertrons® fit a standard 19" rack, or may be ordered with the appropriate cabinet for floor or bench use.

Output Power	ϕ*	Standard Output Voltage Ranges**	Frequency Range	Model Number

REMOTE-PROGRAMMABLE INVERTRONS®

Solid state Invertrons® combined with 830T-Series Programmable Oscillators provide the most advanced programmable AC power sources available on the market today. 830T-Series Programmable Oscillators feature simultaneous and independent programming of frequency, phase, and amplitude compatible with remote controllers such as a computer, punched tape, cards, etc. Models are available in single, two or three phase.

OSCILLATORS
AC LINE CORRECTORS

800T-SERIES PLUG-IN OSCILLATORS

Companion Plug-in Oscillators are available in three types: (A) General-purpose, fixed-frequency; (B) Crystal-controlled, high-stability fixed-frequency; and (C) Continuously variable frequencies. All may be used with the Solid-State Invertrons® to create 1φ, 2φ, or 3φ custom AC power sources tailored to exact requirements. The fixed-frequency oscillators may be ordered with a servo-feedback option for systems requiring extremely high amplitude stabilities and accuracies. This feature provides overall regulation of up to 0.01% against line and load changes.

800T VARIABLE-FREQUENCY MODELS

Freq. Range	Freq. Accy. @ 25°C	Model Number
20Hz to 20KHz in three bands Sine or Square Wave	±1.0%	(1φ) 800T-20/20K-1-1 (2φ) 800T-20/20K-1-2 (3φ) 800T-20/20K-1-3 (3φ) 800T-20/20K-1-3D
45Hz to 75Hz in one band Sine or Square Wave	±0.25%	(1φ) 800T-45/75-.25-1 (2φ) 800T-45/75-.25-2 (3φ) 800T-45/75-.25-3 (3φ) 800T-45/75-.25-3D
300Hz to 500Hz in one band Sine or Square Wave	±0.25%	(1φ) 800T-300/500-.25-1 (2φ) 800T-300/500-.25-2 (3φ) 800T-300/500-.25-3 (3φ) 800T-300/500-.25-3D

810T FIXED-FREQUENCY GENERAL-PURPOSE MODELS

Any Single Freq. 45Hz to 10KHz Sine or Square Wave	±0.1%	(1φ) 810T-Freq.-1.1 (2φ) 810T-Freq.-.1-2 (3φ) 810T-Freq.-.1-3 (3φ) 810T-Freq.-.1-3D
Any Single Freq. 45Hz to 10KHz Sine or Square Wave	±0.1%	(1φ only) System-Servo oscillator with servo feedback set to maintain power source output at 115 VAC. Provides 0.01% line and load regulation from power source.
Any Single Freq. 45Hz to 10KHz Sine or Square Wave	±0.1%	(1φ only) System-Servo oscillator with servo feedback adjustable to produce power source output of 105 to 135 VAC. Provides 0.01% line and load regulation from power source.

820T FIXED-FREQUENCY CRYSTAL-CONTROLLED MODELS

400Hz Sine or Square Wave	±0.01%	(1φ) 820T-400-.01-1 (2φ) 820T-400-.01-2 (3φ) 820T-400-.0001-3
400Hz Sine or Square Wave	±0.0001%	(1φ) 820T-400-.01-1 (2φ) 820T-400-.0001-2 (3φ) 820T-400-.0001-3

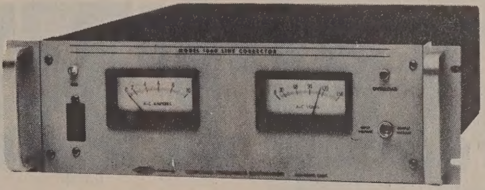
Any Single Freq. 45Hz to 10KHz Sine or Square Wave	±0.0001%	(1φ) 820T-Freq.-.0001-1 (2φ) 820T-Freq.-.0001-2 (3φ) 820T-Freq.-.0001-3 (3φ) 820T-Freq.-.0001-3D

SERIES 1000 DYNAMIC AC LINE CORRECTORS
For Precision AC Power Independent of Powerline Disturbances



- PEAK INSTANTANEOUS POWER TO FIVE TIMES RATING
- 3.5-TO-1 CREST FACTOR
- REDUCES 500 VOLT 10 μSEC TRANSIENTS BY 1000-TO-1
- PURE SINE WAVE POWER
- HARMONIC DISTORTION REDUCTION OF 50:1
- SUPER REGULATION
  - LINE — 0.025%
  - LOAD — 0.025%
- PEAK AMPLITUDE STABILITY: ±0.01% CYCLE-TO-CYCLE
- IMPULSE SETTLING TIME LESS THAN 20 MICROSECONDS
- PEAK AMPLITUDE INSTABILITY LESS THAN 0.01%
- LOW OUTPUT TEMPERATURE COEFFICIENT — 0.005%/°C
- 100 DB COMMON MODE ISOLATION
- HIGH STABILITY — 0.05%/24 HOURS
- AUTOMATICALLY RECOVERS FROM OVERLOAD IN LESS THAN ONE CYCLE
- MONITORING OF VOLTAGE AND CURRENT OUTPUT
- SELF-CONTAINED AIR COOLING
- ALL-SILICON SOLID STATE

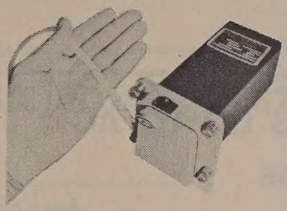
DATA PRINTERS

STRIP PRINTERS

MODEL AN16



A high reliability, compact, lightweight, fully alpha-numeric Strip Printer utilizing the simplest method of data reproduction, impacting pressure sensitive paper between a hammer and a character wheel "on-the-fly." Designed for military airborne applications, it meets all the requirements of MIL-E-5400, Class 2, Curve III.

- High Reliability: 5000 hours airborne MTBF
- Compact Size: 3″ x 3″ x 6.25″
- Lightweight: 4 pounds
- Low Maintenance: No lubrication or adjustments
- DTμL Input: 6 BIT parallel
- Character Selection: 64 characters, ASCII
- Character Rate: 25 per second
- Configuration: 1A) Printer with controls
  2A) 1A with paper storage
  3A) 2A with 400 Hz, P.S.
  4A) 1A with 400 Hz, P.S.

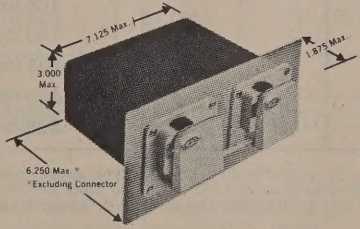
−12 VDC	±5%	20 ma max.
+4.9 VDC	±5%	350 ma max.

AN-16-2A

For Record Storage

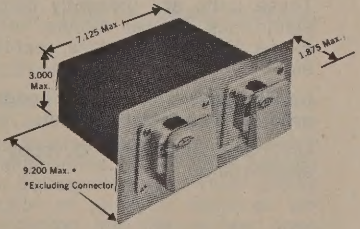
When the system application requires a take-up spooler which will store all or any portion of a printed record, the spooler module is added to the printer and both modules are then mounted to a common panel and enclosed by a single rear cover. Power for the spooler is derived at the printer interface connector at the rear of the enclosure.



AN-16-3A

For Record Storage and Integrated Power Supply

If the system application requires that the printer and spooler derive its own DC voltages, a power supply module is added to the rear of the spooler module and suitably interconnected into the printer and spooler modules.

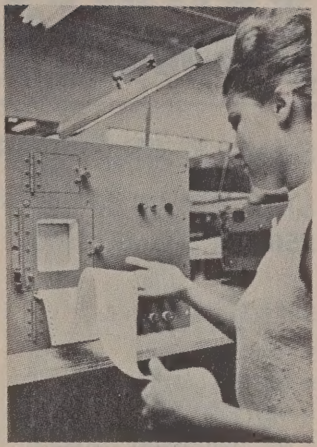


Input Power

Voltage	Regulation	Standard
28 VDC	±5%	75 ma max.
115V 400 Hz 3φ	±10% ±20 Hz	60 Watts max.

LINE PRINTERS

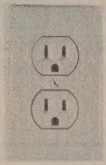
MODEL 2000



This Digital Line Printer utilizes a unique hypocyclodial printing mechanism to provide high reliability, at high printing speeds in rugged military environments. Designed to meet the requirements of MIL-E-16400 for use in military programs.

- High Reliability: 2000 hours shipboard MTBF
- Size: 19″W x 10.5″H x 20″D
- Weight: 70 pounds
- DTμL Data Input: 4 BIT, parallel BCD
- Data Columns: 21 maximum
- Character Positions: 12 per column
- Printing Speed: 15 lines per second

UNINTERRUPTIBLE POWER



We have come to depend on the wall socket, but when all else fails, you can rely on the Clary uninterruptible power source. Perfect insurance against utility outages, brown out and line transients. The Clary "MINI-UPS" is available in single phase ratings from 625 VA to 5 KVA. Ask for our brochure/specification.

VA	Unit Price
625	— $1650
1250	— $2050
2500	— $3390
5000	— $7500

Note: *All of the above units are single phase, three phase units are available by synchronizing three of the above models. Total output power of a three phase unit will become 3 times the above single phase output ratings. Example: 3 each of 48-1000 (1000 VA) units produces 3000 VA when connected in three phase, 50 cycle outputs available on special request. Units available with AC inputs for frequency changer or UPS applications. See catalog page xx for UPS data.

Input and output terminations are terminal blocks.

Units are designed for cabinet mounting in power equipment terminated on aluminum buss bars.

Units are designed for cabinet mounting in power equipment.

All units are available on special request for 19″ rack mounting.

All units available on special request with special D.C. input voltage and/or A.C. output voltage requirements.

These units are presently being used for driving computer electronics, blower motors, incandescent lamps, fluorescent lamps, HID lamps, relays, rectifier loads, RF transmitter loads, etc.

Loads such as heavy air conditioners or refrigeration must be ordered on special request.

Units available with A.C. input for frequency changer or UPS applications.

These units are presently being used for driving computer electronics, blower motors, incandescent lamps, fluorescent lamps, HID lamps, relays, rectifier loads, RF transmitter loads, etc.

Loads such as heavy air conditioners or refrigeration must be ordered on special request.

GENERAL ELECTRICAL SPECIFICATIONS

All systems are mounted in a heavy metal grey cabinet and are designed for easy access to all equipment from the front. The inverter and charger section is located above and completely separated from the battery compartment. The battery section has a stepped arrangement for battery mounting which allows visual electrolyte level inspection of all cells. Batteries are shipped separately and are mounted into the cabinet upon installation.

OUTPUT VOLTAGE: 120 VAC, ±6%, sine wave.

The above voltage variations are for all cases of battery voltages and load changes from zero to 100%. Optional output voltages of 240 VAC, three wires or 277 VAC are available on all models. Other voltages available on request.

OUTPUT FREQUENCY: 60 Hz, ±1%.

OUTPUT EMERGENCY OVERLOAD CAPABILITY: 130% of volt ampere rating at 90% output voltage. (130% rating for 30 minutes.) 2 times full load current at short circuit.

SHORT CIRCUIT PROTECTION: Electronic short circuit and overload protection is supplied at no extra cost. This means there are no output fuses to blow. Upon removal of the overload or short circuit, the output voltage will come up immediately.

INTERRUPTION OF OUTPUT VOLTAGE DURING POWER LINE FAILURE OR POWER LINE RESTORATION: None.

FRONT PANEL CONTROLS & INDICATORS: A.C. output voltmeter - 2% • D.C. voltmeter - 2% • Hi-charge light • Incoming A.C. 'ON' light • Test switch • Frequency differential light.

NOTE: 1) Battery chargers for external battery systems are sized for reservoir up to 1 hour backup time, others available on request. Backup time to be specified by customer.
2) Single phase input/output voltages available—115 to 440 VAC (customer specified).
3) Three phase input/output voltages available—208 to 480 VAC (customer specified).

STANDARD OPTIONS—Sensors, Alarms, Controls • Static Reverse Transfer Switch (4 ms) • Frequency Synchronization and Phase Lock

"DSU" Systems are low- to medium-power-systems, rack-mountable, and self-contained for simplicity of installation. Built-in gelled-electrolyte batteries provide reliable, maintenance-free power. The systems are complete with circuit breakers, rectifier/battery-charger, inverter, batteries, meters, sensors, alarms and control circuitry.

"5000" Series Models are capable of providing long-term battery power for standard loads. The basic system consists of: circuit breakers, rectifier/battery-charger, inverter and standard sensing and control circuitry. Modular design permits building the system to customer requirements.

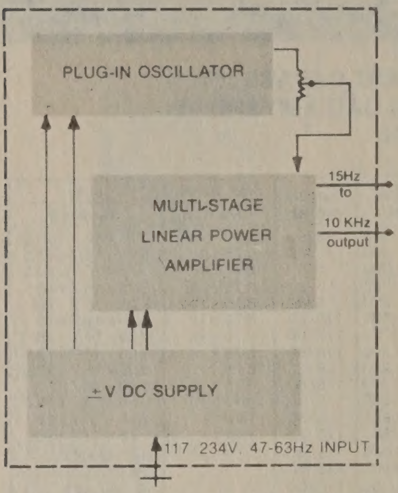
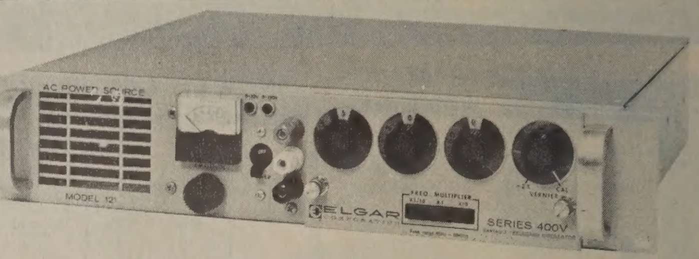
AC POWER SOURCES





Elgar has long been the industry leader in producing solid-state Frequency Converters (AC Power Sources) for a variety of applications. These include laboratories, receiving inspection, production testing, computer-controlled automatic test systems, and facilities which require variable voltage, fixed or variable frequencies independent of power line and load variations.

Think of an Elgar AC power source as a high-power linear amplifier driven by a precision oscillator. Actually, the basic power amplifier consists of a ± DC supply and a multi-state amplifier with a multiple-tap power output transformer. Output frequency is established by a plug-in oscillator.

Although frequently classed as instruments, Elgar power sources are actually power systems. They can deliver a variety of voltages and frequencies at the output, and the phase angles of the oscillators can be controlled, enabling the user to interconnect the output of two or more power sources into 2-phase and either Delta or Wye, 3-phase configurations.

Because of the relative ease of control of the output frequency, amplitude and phase angle, Elgar power sources can be externally programmed by a computer or other digital commands via an Elgar Decoder Programmer Oscillator. This enables avionics and other system designers to automatically "exercise" their end products under simulated power conditions.

Since the many possible output variations are achieved either by a plug-in device or by external interconnection, Elgar power sources can serve many needs without fear of obsolescence.

GENERAL SPECIFICATIONS

Input: 115 or 230VAC, 47–63Hz single-phase, standard for all models through 1500VA, 230/400V or 120/208V 3-phase for 1751, 1753A.

Output Voltage Ranges: 0–32, 0–130, 0–260

Output Frequency Range: 45–10,000 Hz

Load Power Factor: ±0.7 at full VA

Output Harmonic Distortion: 0.6% THD worst case

Line Regulation:
±0.25% at full load vs. ±10% change of input line voltage.

Load Regulation:
±1% from no load to full load over full frequency range and ±10% input range. Adjustable to better than 0.1% for specific load conditions. Fixed frequency systems always less than ±0.25%.

Response Time: Less than 50 μsec.

Noise Level: 70db below full output. Includes plug-in oscillator.

Gain Stability:
±0.25% for 24 hours at constant line, load and temperature.

Temperature Range:
Operating, -20° to +50°C; Storage, -40° to +80°C.

NEW "C" SERIES MODELS

Elgar's new "C" series provides lighter weight, reduced size and higher efficiency than the standard line. While available only with a single range output (0-125V) due to the transformerless approach employed, an optional auto-transformer is available to provide 26V or 230V output ranges.

Variable Frequency Oscillator

FREQUENCY GENERATION TECHNIQUES

The output frequency of the power source is determined by the plug-in oscillator which develops the low distortion sine wave to the power amplifier. A variety of interchangeable versions are available, including 45Hz to 10KHz, narrow range variable or fixed frequencies with accuracies to 0.0001%.

Depending on the accuracy of frequency control desired, either of two methods of frequency generation is utilized. One method employs a modified phase shift oscillator.

This technique is used in both the variable and fixed frequency plug-ins since it requires only a change of resistance to produce a change in frequency. External sync capability is a standard option to this group of oscillators and the external sync signal can be sine or square wave, fundamental or odd order harmonics. The other method uses a crystal for precision fixed frequency. By utilizing these two methods of frequency generation, Elgar offers over 50 standard plug-in oscillators and programmable oscillators as well.

PLUG-IN OSCILLATOR MODULES AVAILABLE FOR USE WITH ALL ELGAR AC POWER SOURCES

These oscillators provide 0.01% line and 0.01% load regulation and 0.01° phase angle regulation around the power amplifier(s) at the point(s) of sense. They also provide 0.1% amplitude and 0.1° phase angle stability for 1000 hours at constant line, load and temperature. Normally for fixed voltage applications. Please specify voltage. Amplitude temperature coeff. 0.005%/°C.

PROGRAMMABLE OSCILLATORS

Digital Decoder Programmers (DDP's) which provide the interface between a computer and any Elgar AC Power Source System are available to enable programming of every function controllable in an AC Source including frequency, voltage amplitude, and phase angle in multi-phase systems. Special purpose programmable oscillators such as Elgar's TG-704 are also available to simulate transients and line distortion as well.

Available with BCD inputs or per the IEEE standard interface bus. Elgar's DDP's enable the use of Elgar AC Power Sources with the most advanced Automatic Test equipment.

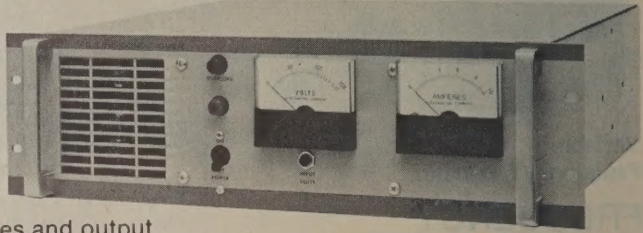
AC LINE CONDITIONERS AND HIGH ISOLATION TRANSFORMERS



Elgar AC Line Conditioners provide precise, clean AC power to critical loads by eliminating high-speed AC line and load transients and distortion as well as providing precise regulation. These versatile instruments have response times 5,000 times faster than the fastest conventional AC line regulators and line isolation of 70 to 100 db, far superior to mere isolation transformers. All Elgar AC line conditioners are designed for continuous operation and are contained in rack-mount enclosures. Front panel controls include meters to monitor input and output voltages and output load current, an overload indicator and an input circuit breaker.

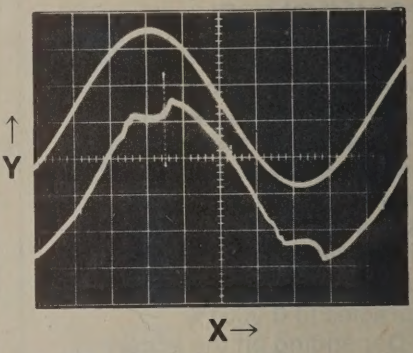
Users of voltage-sensitive equipment need isolation from high-speed AC line transients. These transients can cause erratic operation, component failures, and a reduction in equipment life. In sensitive instrumentation and data processing equipment, high-speed line transients often are the cause of erroneous information.

Elgar AC Line Conditioners are the best, most reliable solution to these problems.

GENERAL SPECIFICATIONS

INPUT/OUTPUT ISOLATION: 100 db (60 Hz)
OUTPUT DISTORTION: 0.2% max for up to 10% input harmonic distortion*
LINE REGULATION: ±0.025% for ±10% input AC line variation
LOAD REGULATION: ±0.025% for no load/full change full current into unity to zero lagging or leading load**
REDUCES 500V 10μ SEC TRANSIENTS BY 1000:1
SUPPLIES PEAK CURRENTS 3.5 TIMES RMS RATING
TEMPERATURE COEFFICIENT: 0.005% per °C
PEAK AMPLITUDE STABILITY: ±0.01% (cycle to cycle)
AMPLITUDE DRIFT: ±0.05% 24 hrs constant line, load and temperature
IMPULSE SETTLING TIME: less than 20 μsec
AMBIENT TEMPERATURE: 0–55°C
OVERLOAD INDICATION: Front panel lamp lights when rated output current is exceeded
OVERLOAD PROTECTION: Continuous overload actuates front panel circuit breaker
METERING: Reads: input voltage, output voltage, & output current
COOLING: Forced Air

*400 Hz models 0.5% max. **400 Hz models ±0.1%



Y=75 volts/cm
X=2 millisec/cm

The lower trace shows a very distorted input AC line waveform with a 75 volt peak spike riding on it. The upper trace shows the output of the Elgar AC Line Conditioner which is perfectly clean and shows no trace of the AC input anomalies.

HIGH ISOLATION TRANSFORMERS

Elgar's new HIT series of extremely High Isolation Transformers are now available in standard ratings from 1KVA to 20KVA single phase, 3KVA to 60KVA three phase with effective coupling capacitance values of .001pF or .0005pF. All models are designed for 50 or 60Hz operation and are connectable for 120 or 240VAC use, to 480VAC on the larger models.

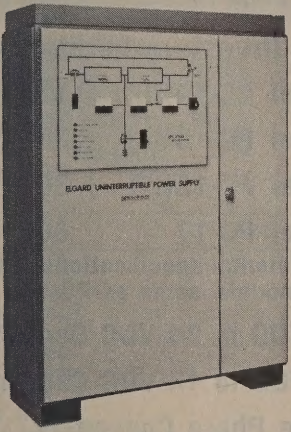
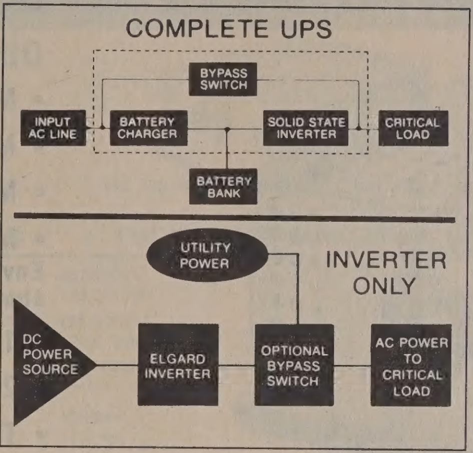
UPS/INVERTERS





ELGARD UPS, all solid-state Uninterruptible Power Systems, combine a battery charger, battery bank, solid-state inverter and bypass switch to provide clean, continuous power to critical loads. The battery charger converts AC line power to DC. Normally, this DC power simultaneously float-charges the battery bank and powers the inverter. Upon loss of input AC, the inverter continues to furnish the critical load with uninterruptible AC power by drawing its energy from the battery bank. Since the battery bank is always connected to the inverter as well as to the battery charger, there is no switchover time. AC output frequency from the Uninterruptible Power Source is phase-locked to the input AC under normal conditions. When there is no input AC, the output frequency is automatically determined by the stable internal oscillator.

In the unlikely event of a component failure within the Uninterruptible Power Source, the bypass switch will be activated and the critical load will automatically transfer to the input AC line. The standard switch is an electromechanical contactor which performs the reverse transfer with a 50- to 150-millisecond interruption. An optional solid-state bypass switch (SBS) that can make the transfer with no interruption in power to the load is available for all UPS and Inverter models.

ELGARD INVERTERS are designed to accept DC input power (derived from a nominally 125 or 130VDC rectifier system or from a battery bank with a final discharge voltage of 105VDC) and convert it to tightly regulated, single-phase AC power.

ELGARD UPS are designed for a useful life of 15 to 20 years. Mathematical analysis and operating history indicate the anticipated mean-time between failures (MTBF) will be about 20,000 hours, depending upon the model and features selected. With appropriate interface of the bypass switch (electromechanical or static) with the load, so that bypass action does not cause a transient greater than the load can tolerate, an MTBF in excess of 100,000 hours for the output load bus can be demonstrated.

GENERAL SPECIFICATIONS

Input and Output Voltages:
  0.5 to 2.5KVA: 115VAC std., 230V, 100V and 200V available.
  5KVA and above, single-phase: 230VAC std., 115V available
  Three-phase models: 120/208, 380, 480 available
Voltage Regulation: ±1%
Instantaneous Transient (50% load change):
  Single phase models: ±15%
  Three phase models: ±10%
Frequency: 60Hz Std., 50Hz available
Frequency Stability: ±0.25%
Continuous Power: Rated KVA at 0.8 to 1.0 P.F.
Load Power Factor: 0.7 lag to unity
Harmonic Distortion: 5% THD maximum

Overload Rating:
  0.5 to 2.5KVA:
    110% for 15 minutes
    150% for 5 seconds
    200% for 5 cycles
  5KVA and above:
    125% for 20 minutes
    150% for 10 seconds
    200% for 10 cycles
Inverter Efficiency at Full Load:
  0.5 to 2.5KVA: 75% minimum
  5KVA to 15KVA: 80% minimum
  20KVA and above: 85% minimum

STANDARD INSTRUMENTS:
  DC Voltmeter, AC Voltmeter,
  Output AC Ammeter—5KVA & above
STANDARD INDICATORS:
  Input Power On
  Low DC

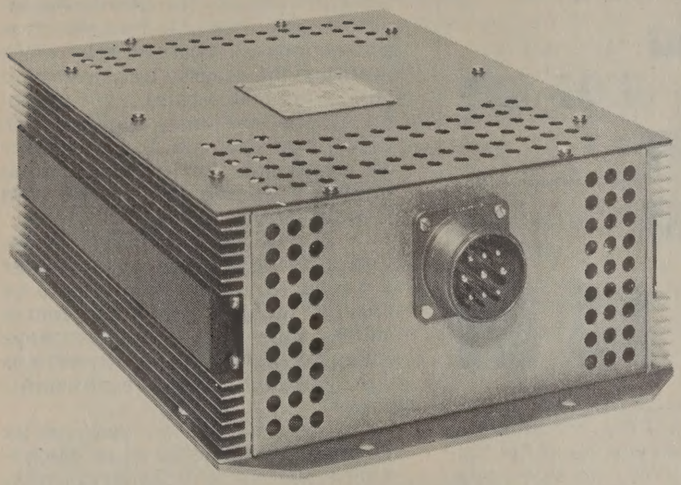
FLITE-TRONICS 60 Hz & 400 Hz STATIC INVERTERS



Other Inverters Available:

- Model PC-14B(A) 125 VA
- Model PC-15BC( ) 250 VA
- Model PC-15H ( ) 300 VA
- Model PC-17 600 VA

Environmental specifications of the above models, same as PC-17A

- 12 VDC to 24 VDC Converters
- 24 VDC to 12 VDC Converters
- Three Phase Converters Model PH-3ϕ-400

For applications requiring greater than 750 VA of continuous power, the Flite-Tronics' Model PC-17A Inverter can be paralleled as necessary to double, triple, or quadruple the output power of a single unit. This is simply done by phase locking the oscillator in the PC-17A. Malfunction of a single unit when connected in this manner will not damage the other units in parallel. Each unit has its own overload protection. Each device is capable of self-preservation.

SPECIFICATIONS MODEL PC-17A (750 VA) STATIC INVERTER

INPUT VOLTAGE:
28 VDC ±2.0 VDC

INPUT CURRENT:
39A — full load
1.5A — no load

OUTPUT VOLTAGES:
115 VAC +5% −7%
26 VAC +5% −7%

OUTPUT FREQUENCY:
400 Hz ±1%

OUTPUT POWER:
750 VA continuous for 115 VAC output
150 VA continuous for 26 VAC output

NOTE: Total continuous output power 750 VA.

OUTPUT WAVEFORM:
Sine Wave, Single Phase

HARMONIC DISTORTION:
7% maximum (Typically 3%)

POWER FACTOR:
.8 to −.95

ALTITUDE:
45,000 feet

EFFICIENCY:
70% typical

TEMPERATURE:
−65°F to 160°F

WEIGHT:
16.2 lbs.

SIZE:
Width 8½″
Length 12″
Height 4 1/16″

INPUT OVERVOLTAGE:
Withstands 130% overvoltage (37 VDC) for five minutes minimum while delivering full rated 750 VA output power. Output voltage under this condition 115 VAC +5% −7%.

EMISSION RFI:
Radiated & Conducted . . . 90KC to 1000MC.

Far below levels specified in Appendix A of RTCA Paper 120-61/DO-108 Category "A".

HUMIDITY:
Greater than 95% for ten days, temperature cycled between 75°F to 160°F.

VIBRATION:
Tested to withstand in three directions:

.08 DA	5-15 Hz
.036 DA	15-70 Hz
10 G's	70-500 Hz

SHOCK:
To withstand at least 10 G's for 11 milliseconds in three directions.

OVERLOAD CAPABILITY:
Deliver 150% of rated output current at rated output voltage for a duration of not less than 5 minutes (i.e., 900 volt amp load).

INPUT VOLTAGE PROTECTION:
Unit withstands transients of 88 volts lasting 1 millisecond on the 28.0 VDC input line.

EXCESSIVE OVERLOAD & OUTPUT SHORT CIRCUIT:
Withstands without damage or degradation loads exceeding 150% nominal to an output short circuit. Unit delivers rated output on removal of above condition.

SPECIFICATIONS MODEL PC-16 STATIC INVERTER

POWER OUTPUT:
250 VA Continuous
150% Overload 5 minutes
pf — .8 to 1.0

VOLTAGE INPUT:
1. 28 VDC ±2 Volts
2. Withstands 88 Volt Transient for 1 Millisecond

INPUT CURRENT:
14 Amp — full load
1 Amp — no load

FREQUENCY:
60 HZ ±1 Hz

VOLTAGE OUTPUT:
115 VAC RMS +5% −7%

AMPLITUDE DISTORTION:
Less than 7%

WAVE FORM:
Sine Wave

PHASE:
Single

SHORT CIRCUIT
Withstand for 1 minute or longer

TEMPERATURE:
−65°F to +160°F

ALTITUDE:
45,000 Ft.

WEIGHT:
16 lbs.

SIZE:
7½″ x 12″ x 4″ overall dimensions

For application requiring greater than 250 VA of continuous power Model PC-16 can be paralleled to double or triple the output power of a single unit.

Withstand 130% input overvoltage for 5 minutes while supplying full rated VA output power. Output voltage under this condition 115VAC +5% −7%.

OVERLOAD CAPACITY:
Capable of 150% output current overload for at least 5 minutes.

INPUT VOLTAGE PROTECTION:
Inverter withstands transients of 88 volts lasting 1 millisecond on the 28.0VDC input line.

EXCESSIVE OVERLOAD AND OUTPUT SHORT CIRCUITS
Withstand without damage or degradation loads exceeding 150% of rated output to an output short circuit. Inverter delivers rated output on removal of above condition.

HUMIDITY:
Tested to greater than 95% for ten days, temperature was cycled between 75°F. to 160°F.

VIBRATION:
Tested to withstand in three directions:

.08 DA	5-15 Hz
.036 DA	15-70 Hz
10 G's	70-500 Hz

SHOCK:
Tested to withstand at least 10 G's for 11 milliseconds in three directions.

EMISSION RFI:
Radiated and conducted . . .90 KC to 1000 MC, far below specification limits of RTCA Paper 120-61/DO-108, Appendix A.

PC-17 TSO'D (600 VA) STATIC INVERTER

SPECIFICATIONS:

INPUT VOLTAGE:
28.0VDC ±2VDC, operates electrically down to 20.0VDC.

INPUT CURRENT:
31 Amps full load
1¼A no load typical

OUTPUT VOLTAGE:
115VAC +5% −7%
26VAC +5% −7%

OUTPUT FREQUENCY:
400 Hz ±1%

OUTPUT POWER:
600VA @ 115VAC and 125VA @ 26VAC. Total load not to exceed 600VA.

OUTPUT CONFIGURATION:
Sine Wave, Single Phase

HARMONIC DISTORTION:
Typically 3% (7% max)

POWER FACTOR:
.8 to −.95

ALTITUDE:
45,000 feet

EFFICIENCY:
70% typical

TEMPERATURE:
−65°F. to 160°F.

WEIGHT:
14.6 lbs.

DIMENSIONS:
W8½″ L12″ H4 1/16″

INPUT OVERVOLTAGE:
Withstand 130% input overvoltage for 5 minutes while supplying full rated VA output power. Output voltage under this condition 115VAC +5% −7%.

OVERLOAD CAPACITY:
Capable of 150% output current overload for at least 5 minutes.

INPUT VOLTAGE PROTECTION:
Inverter withstands transients of 88 volts lasting 1 millisecond on the 28.0VDC input line.

EXCESSIVE OVERLOAD AND OUTPUT SHORT CIRCUITS:
Withstand without damage or degradation loads exceeding 150% of rated output to an output short circuit. Inverter delivers rated output on removal of overload condition.

HUMIDITY:
Tested to greater than 95% for ten days, temperature was cycled between 75°F. to 160°F.

VIBRATION:
Tested to withstand in three directions:

.08 DA	5-15 Hz
.036 DA	15-70 Hz
10 G's	70-500 Hz

SHOCK:
Tested to withstand at least 10 G's for 11 milliseconds in three directions.

EMISSION RFI:
Radiated and conducted . . . 90 KC to 1000MC, far below specification limits of RTCA Paper 120-61/DO-108, Appendix A.

PH-3φ-400 THREE PHASE CONVERTER

Flite-Tronics Co., Inc. introduces a **three phase converter** Model PH-3φ-400, for use with Flite-Tronics' 400 Hz static inverters.

The PH-3φ-400 is designed to convert two Flite-Tronics' inverters into a 115VAC, 400 Hz DELTA three phase power source with 60 degrees between phases. A transformer can be used to realize 120 degrees between phases. The PH-3φ-400 will also convert three inverters into a WYE 115/200VAC, 400 Hz three phase operation.

SPECIFICATIONS:

INPUT:
28VDC at .15 Amp. max.

FREQUENCY:
400 Hz

FUNCTION:

DELTA CONFIGURATION

2 Each Inverters	Output VAC	Phase Angle	Total Power
PC-15BC ( )	115	60°	500VA
PC-17	115	60°	1200VA
PC-17A	115	60°	1500VA

WYE CONFIGURATION

3 Each Inverters	Output VAC	Phase Angle	Total Power
PC-15BC ( )	115/200	120°	750VA
PC-17	115/200	120°	1800VA
PC-17A	115/200	120°	2250VA

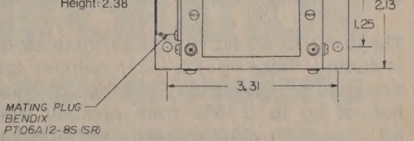
ENVIRONMENTAL:
Designed to meet RTCA paper DO-138 Category A

TEMPERATURE:
−55°C. to 71°C.

ALTITUDE:
50,000 feet

SIZE IN INCHES:
L3¾″ W2⅛″ H2⅜″

WEIGHT:
0.5 lbs.



FLITE-TRONICS, co., inc.

NOBRUSH® FREQUENCY GEORATOR CORPORATION

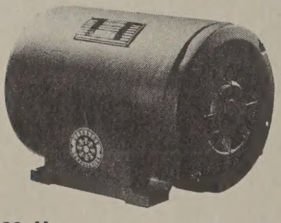
Celebrating our 25th anniversary

PERMANENT MAGNET GENERATOR DESIGN

"NoBrush" Motor Generators and Frequency Converters are efficient, compact, dependable, quiet running units for powering all types of electronic systems and electrical equipment. The heart of each "NoBrush" power system is a "NoBrush" permanent magnet generator which features a cast aluminum rotor designed to give superior voltage stability. • A typical "NoBrush" generator is mounted with a high quality induction or synduction motor within a single aluminum alloy shell. • Oversize pre-lubricated ball bearings sealed for life, coupled with the absence of brushes, commutators or slip rings, insure long-term maintenance-free operation. • Georator brushless permanent magnet generators are noted for their compact construction, ruggedness, ability to withstand short circuits, and excellent wave form. • All Georator power systems whether utilized for frequency conversion or basic power requirements, provide true "line isolation and stabilization" for protecting sensitive electronic systems from momentary power interruptions, switching transients, brown outs, or voltage spikes.

PERMANENT MAGNET FEATURES:

- ☐ *Line Isolation and Stabilization*
- ☐ *Stable Output Voltage*
- ☐ *High Overload Capacity*
- ☐ *Withstands Short Circuits*
- ☐ *Extremely Low R. F. Noise*
- ☐ *Minimum Maintenance*
- ☐ *Lightweight*
- ☐ *Low Audible Noise*
- ☐ *Cool Operation*
- ☐ *Operates in Adverse Environments*

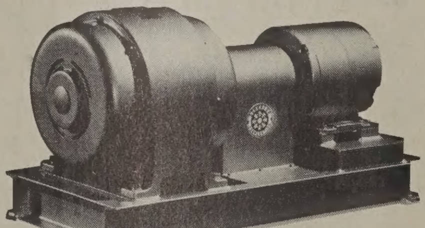


60 TO 60 Hz LINE ISOLATOR SERIES 30 UNIT SHELL

This small isolator stabilizer Motor-Generator offers full line isolation for small power requirements up to 1 KVA. Permanent magnet field generator coupled with the high inertia of the rotating system assures maximum electrical isolation between line and load. The rugged unit shell construction gives long, maintenance-free operation.

Model No.	KVA Rating	Phase In/Out	Output Voltage	Input Voltage	Dimensions H"/L"/Weight
35-118	0.35	1/1	115/230	115/230	14.5"/14.0"/110 lbs.
30-194	0.5	3/1	115/230	230/460	14.8"/16.1"/120 lbs.
30-198	0.5	1/1	115/230	115/230	14.8"/16.1"/120 lbs.
30-195	1.0	3/3	120/208	230/460	14.8"/16.1"/130 lbs.
30-199	1.0	1/3	120/208	115/230	14.8"/16.1"/130 lbs.

These 60 to 60 Hz brushless generators, including those in the next column are designed to accept long term input variation of up to ±15% from nominal with no change in output. Inertia stabilization allows these units to absorb input line transients of as much as 30% for as long as 500 milliseconds with less than 1% change in output.



60 TO 60 Hz ISOLATOR STABILIZER SERIES 37 IN LINE

Larger Motor Generators in ratings up to 25 KVA are also available to provide full line isolation and distortion free power to protect electronic equipment from power line excursions and momentary power loss.

Model No.	KVA Rating	Phase In/Out	Output Voltage	Input Voltage	Dimensions H"/L"/Weight
37-015	1.5	3/1	115/230	220/440	18.3"/34"/300 lbs.

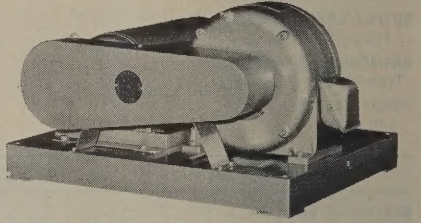
Series 37 Data Sheets containing detailed specifications are available upon request.



50 TO 60 Hz and 60 TO 50 Hz FREQUENCY CONVERTERS

These ruggedly built, belt driven, motor-generator sets are mounted on a sturdy steel frame base. Units in the 0.5 to 5 KVA power range are designed around the highly efficient NoBrush Permanent Magnet Generator. Units in the 6.25 to 25 KVA power range have brushless rotating rectifier type generators with voltage regulators, to provide ±1% output voltage regulation. These motor-generators provide frequency conversion, basic power, and superior line isolation and stabilization for exported and imported electrical and electronic equipment.

50 to 60 Hz

Model No.	KVA Rating	Phase In/Out	Voltage Output	Approx. Wt. lbs.
37-110	2.0	1/1	115/230	420

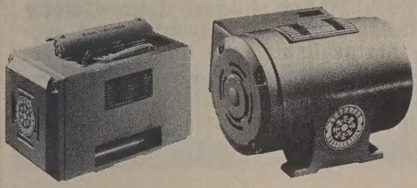
CONVERTERS & GENERATORS

The simplest, most rugged, most dependable power source.



60 TO 400 Hz FREQUENCY CONVERTERS SERIES 30 UNIT SHELL

A highly compact, brushless, Motor Generator Set for conversion of 50 or 60 Hz power to 400 Hz or higher frequencies. Generator and Motor Rotors are pressed on a common shaft, with shielded ball bearing at ends of shaft, all contained within an aluminum alloy shell.

Model No.	KVA Rating	Phase In/Out	Output Voltages Full Load *	Input Voltage **	Dimensions H"/L"/Weight

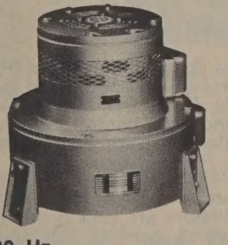
- ☐ Other Generator Outputs Available: 120, 180, 280, 360, and 840 Hz
- ☐ Other Standard and Non-Standard Voltages.
- ☐ Exact 400 Hz Output.
- ☐ DC Outputs at Low or High Voltage.



60 TO 400 Hz FREQUENCY CONVERTER SERIES 33 VERTICAL

High quality induction motor is close coupled to a famous "NoBrush" generator for a really outstanding unit. Very compact, with high power to weight and size ratio. Available variations include: 50 Hz Input; Standard and Non-Standard AC output voltages; DC outputs at low or high voltage; and other output frequencies.

Model No.	KVA Rating	Phase In/Out	Dimensions Diameter	Height	Weight
33-001	2.5	3/1	20.5"	18.3"	173 lbs.
33-002	3.5	3/1	20.5"	18.3"	178 lbs.
33-003	5.0	3/1	20.5"	18.3"	273 lbs.

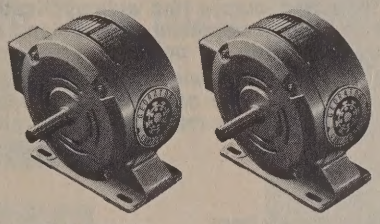
33-102	15.0	3/3	24.0"	24.2"	485 lbs.
30-120	25.0	3/3	23.0"	26.5"	1,213 lbs.



ALTERNATORS PERMANENT MAGNET

The original, revolutionary, "NoBrush" generator. Permanent magnets yield stability, reproducibility, ruggedness and virtually zero R.F. noise. Available in large variety of ratings, frequencies and voltages. Supplementary windings with rectifiers available for D.C. output.

400 Hz ALTERNATORS

Model No.	KVA Rating	Phase Out	Speed RPM	Dimensions H"/L"/Weight
36-001	0.25	1	3428	8¼"/4 1/16"/17 lbs.
36-003	0.5	1	3428	8¼"/4 1/16"/22 lbs.

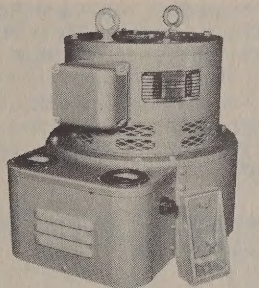
36-007	1.0	3	1714	13 3/16"/4 9/16"/35½ lbs.
36-008	2.0	3	1714	13 3/16"/4 9/16"/45 lbs.
36-009	2.5	1	1714	17¼"/6¾"/105 lbs.
36-010	5.0	1	1714	17¼"/6¾"/137 lbs.
36-011	5.0	3	1714	17¼"/6¾"/103½ lbs.
36-012	7.5	3	1714	17¼"/6¾"/120 lbs.
36-013	10.0	3	1714	17¼"/6¾"/135 lbs.
36-151	15.0	3	1714	25"/11.2"/310 lbs.
36-152	25.0	3	1714	25.3"/17"/730 lbs.

- ☐ Alternator Frequencies Available Include:
  50, 60, 120, 180, 240, 300, 360, 420, 840 Hz.
- ☐ All Units are Available with:
  - Standard and Non-Standard AC Voltages.
  - Multiple DC Outputs/Low Voltage taps.
  - Special Housings for Flange Mountings.
- ☐ Separate ROTORS and STATORS can be provided for OEM Applications.
- ☐ Permanent Magnet Alternators for: Pilot Excitors—Field Flashing—Tachometers—Control Applications—Aircraft.

LIGHTWEIGHT 400 Hz ENGINE-GENERATORS

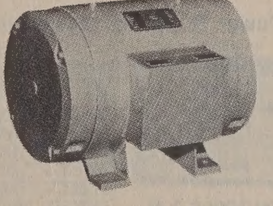
Lightweight portable 400 Hz permanent magnet engine generators are available with 1 ϕ or 3 ϕ outputs from 0.5 KVA to 2.0 KVA. Choice of outputs include 400 Hz, or combination of AC and DC output, or entire output rectified to single or dual DC output.



VOLTAGE REGULATED 60 TO 400 Hz FREQUENCY CONVERTERS

This new, Series 39, Regulated, Vertical Frequency Converter combines the "NoBrush" permanent magnet generator together with control windings and simplified sensing electronics, to provide both the traditional "Brushless" rugged design and a closely regulated 400 Hz power system. Voltage regulation is ± 1.5% no load to full load, 0.8 to 1.0 power factor, with a voltage adjustment feature of ± 5%.

Model No.	KVA Rating	Voltage Output	Voltage Regulation	Phase In/Out
39-001	5	120/208	± 1.5%	3/3
39-002	5	115/230	± 1.5%	3/1



60 TO 180 Hz, 360 Hz, 840 Hz FREQUENCY CONVERTERS FOR HIGH FREQUENCY TOOLS, MOTORS, AND LIGHTING

These frequency converters are available for powering high frequency metal-working tools, wood-working tools, motors, and lighting systems. The highly dependable, minimum maintenance, PERMANENT MAGNET BRUSHLESS DESIGNS are available in many ratings up to: 5 KVA for 180 Hz applications; 10 KVA for 360 Hz applications; and 30 KVA for 840 Hz applications.

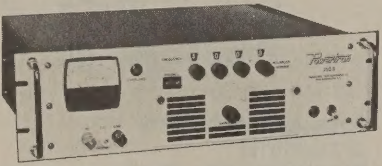
Celebrating our 25th anniversary

Powertron SOLID STATE AC POWER SUPPLIES

The Powertron AC Power Supplies provide stable, low distortion, AC power at frequencies within the audio frequency spectrum. These highly reliable and versatile power sources find wide application in calibration and test stations, motor drives, gyro wheel supplies, laboratory use, military component testing, and operating foreign equipment. These supplies may be used whenever it is necessary to provide AC power at a frequency not available from the power lines.

The various supplies feature all solid state construction, wide operating frequency range, low distortion, and a wide variety of output voltages and impedances. The units are designed to be used in modular form so that a single unit can provide single phase output, and two or three units may be used to provide two phase or three phase outputs respectively.



AMPLIFIER SPECIFICATIONS

(Series 250S, Illustrated)

Output Circuit:
Single phase, isolated (Ground terminal is provided for optional grounding of output.)

Output Power:
250 VA

Load Power Factor:
.7 Lead through .7 Lag for full power output. Useable to .2 at reduced power.

Output Voltage Range:
0-130 V RMS (An output connector provided at the rear of the unit may readily be reconnected to provide optimum power output at other voltages. Ranges available are 0-260 V, 0-190 V, 0-130 V, 0-90 V, 0-75 V, 0-67 V, 0-60 V, 0-38 V, 0-30 V, and 0-17 V.

Output Frequency Range:
45 Hz to 10,000 Hz for full power out. 20 Hz to 20,000 Hz at reduced power.

Output Distortion:
0.1% mid band

Load Regulation:
Factory set to ±0.5% mid band (A control is provided for zero regulation adjustment over most of frequency range.)

Line Regulation:
±0.1% for ±5% line change.

Transient Response:
50 Microseconds.

Hum Level:
80 db approx. below rated output voltage.

Thermal Overload Protection:
Output transistors protected by thermal cutout circuit.

Short Circuit Protection:
Output may be shorted indefinitely without damage to unit.

External Amplifier Input:
An input connector is provided at the rear of the unit when it is desired to drive the amplifier from an external source. Model XA-1 plug-in Module is required for this mode of operation.

External Sync. Input:
An input connector is provided at the rear when it is desired to synchronize the plug in oscillator with an external frequency source.

Convenience Outlets:
Two convenience outlets controlled by the power switch are provided at the rear of the unit. These permit single control operation of one or two additional amplifiers when 2ø or 3ø outputs are required. When not used for this purpose, the outlets may also be used to turn on auxiliary equipment which is mounted in the same test console.

Meter:
A voltmeter with range of 0-150 V RMS is provided to monitor the output voltage.

Input Power:
115 V or 230 V, 50-60 Hz (400 Hz input available).

Ambient Temperature Range:
0° C to 55° C.

Dimensions:
5¼ x 19″ Rack Panel x 14″ Deep.

Weight:
75 Lbs. Approx.

The ordering designations listed below are for convenience of specifying the components required for various power supply configurations. To select an appropriate unit for your requirements first determine which category, 1-phase, 2-phase, or 3-phase, is most suitable to your intended load. Then use the ordering designation adjacent to the required output power within that category. For the complete ordering designation replace the asterisk with the ordering code letters of the plug-in-oscillator listed

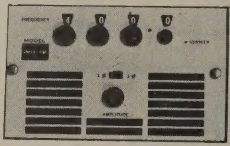
9000S-3- *	9KVA		



PLUG-IN OSCILLATORS

Single phase (1ø) and polyphase (Pø) oscillators are available for both fixed frequency and variable frequency output. A coarse and fine concentric control is included on each oscillator panel for precise amplitude adjustment. Polyphase oscillators include a switch on the front panel which provides either two-phase or three-phase output. All plug-in oscillators are provided with Sync. capability which permits locking-in their output frequency with an external source of the same nominal frequency.

CODE		FREQUENCY	ACCURACY

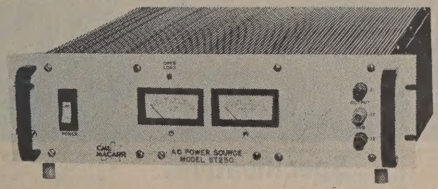
POWER SUPPORT EQUIPMENT

NEW! SYNAMP® solid state AC power sources synthesized sine wave NOW IN STOCK!!

single phase 50-60-400 Hz three phase

- High Efficiency 75% Typical
- Rack Mount Construction
- Versatility — may be used as a Frequency Converter or Precision AC Power Source
- Output Voltage Range: 105-130VAC
- Output Frequency Range: 45-460 Hz at Full Rated Output
- Modular Power Transistor Assemblies

ST series 250VA to 4000VA



MODEL ST250-41VA

MODEL	OUTPUT POWER VA	INPUT	DIMENSIONS H x W x D	SHIPPING WEIGHT

TT12000	12000	208/230 3ϕ 47-63 Hz	32 x 19 x 20	340 lbs.

Single Phase and Two Phase Output

Available at Extra Cost

Standard 3 phase power supplies may be used to provide a 2 phase output at ⅔ of rated power. An internal selector switch internally provides either 90 degrees or 120 degrees phase separation for 2 or 3 phases respectively.

Standard 3 phase power supplies may be used to provide a 1 phase output of 57% of rated power over an adjustable range of 105-130 volts.

Specifications

OUTPUT CONFIGURATION: Single phase — two wire isolated. Three phase — four wire WYE with floating neutral or delta.

INPUT CONFIGURATION: 115/230 ±10% 1ϕ 47-63 Hz all models thru 1KVA, others 208/230 ±10% 3ϕ 47-63 Hz. Special voltages available at slight extra cost.

OUTPUT VOLTAGE: Single phase, 105-130V @ full power. Three phase, 105-130V/185-225V line to line or line to neutral @ full power.

VOLTAGE ADJUSTMENT: Single phase units, internally adjustable. Optional front panel mounted. Three phase units, standard front panel mounted.

PHASE DISPLACEMENTS: Three phase units 3% maximum.

LOAD POWER FACTOR: .7 lead or lag at rated output.

EFFICIENCY: 75% typical.

VOLTAGE REGULATION: ±1% with ±10% line, ±1% load.

FREQUENCY STABILITY: .25% standard, options to .001%.

RESPONSE TIME: Less than 200 milliseconds at 60 Hz and 100 milliseconds at 400 Hz.

HARMONIC DISTORTION: 4% maximum at no load, 2% at full load.

AMBIENT TEMPERATURE: −20° to 50°C.

TEMPERATURE STABILITY: Voltage .01% per degree C typical. Frequency .05% per degree C typical.

CONTROLS AND METERS: All models 500VA and up include panel voltmeter and ammeter. Variable frequency models have front panel mounted frequency control dial.

PROTECTION: Input line circuit breaker. Current limit on output. Circuit breaker available at extra cost.

TERMINATIONS: Output on front and rear. Input on rear mounted barrier strip.

CONSTRUCTION: Standard 19″ rack mount with full dust covers. Bench adaptors available at extra cost. Add (-C) to Model No.

FINISH: Front panels finished in satin finish aluminum with black marking. Chassis surfaces are protected by clear irridite.

Ordering Information

To specify give model number and option code number as shown below. For example: 500VA single phase 45-66 Hz, Model ST500-01 Add (-VA) for Voltmeter and Ammeter on Model ST250.

Frequency	Code	Mode
45-66 Hz	-01	variable
320-460 Hz	-02	variable
45-66 Hz and 320-460 Hz	-03	2 range variable
50 Hz	-50	fixed
60 Hz	-60	fixed
400 Hz	-41	fixed

- Minimum Package Sizes 200VA in 5¼" high standard rack space
- Response time 50 microseconds
- Frequency stability .25% to .001%

Specifications

OUTPUT CONFIGURATION: Single phase two wire isolated; three phase four wire.

OUTPUT VOLTAGE: Single phase: 105-130V standard @ full power; Add (-1). Optional 65, 130, 260V w/automatic range voltmeter; Add (-2) to model no. Three phase: 105-130/185-225V line to line or Wye or delta loads.

PROTECTION: Current overload with automatic reset.

LOAD POWER FACTOR: .7 lead or lag.

HARMONIC DISTORTION: Less than .5%, 45-10 KHz @ full load. Less than 1% with plug-in oscillator.

REGULATION: ±.25% with ±10% input line variation ±1.0% NF-FL.

NOISE LEVEL: 70 db below rated output.

OPERATING TEMPERATURE: −20°C to 40°C.

TEMPERATURE STABILITY: Voltage .01% per degree C typical. Frequency .05% per degree C typical.

METERS: Models 500 VA and up include panel mounted output voltmeters. Optional at extra cost on lower power models. Add (-V) to model no.

CONTROLS: Output voltage and frequency potentiometer mounted on plug in oscillator panels where required.

CONSTRUCTION: Standard 19" rack mount with full dust covers. Bench adaptors available at extra cost.

FINISH: Front panels finished in satin finish aluminum with black marking. Chassis surfaces are protected by clear irridite.

Single Phase and Two Phase Output

Standard 3 phase power supplies may be used to provide a 2 phase output at ⅔ of rated power. An internal selector switch internally provides either 90 degrees or 120 degrees phase separation for 2 or 3 phases respectively.

Standard 3 phase power supplies may be used to provide a 1 phase output of 57% of rated power over an adjustable range of 105-130 volts.

Single Phase & Two Phase Output

Standard 3 phase amplifiers may be used to provide a 2 phase output at ⅔ of rated output power. Special plug-in oscillators are available with selectable 90° or 120° phase separation for 2 phases or 3 phase operation respectively.

Standard 3 phase amplifiers may be used to provide a single phase output at 57% of rated output power over an adjustable voltage range of 110-125 volts.

Specifications

OUTPUT CONFIGURATION: Three Phase, 4 wire wye, neutral floating.

OUTPUT VOLTAGE: 0-125 Volts line-to-line and 0-217 Volts line-to-line; both sets of terminals are presented at output. Full power available at output of 110-125 volts and 190-217 volts. Master gain control and phase 2 and 3 trim controls provided on front panel.

OUTPUT POWER: Rated output power for each model is shown in chart. Maximum power per phase is ⅓ of 3φ output.

LOAD POWER FACTOR: 0.7 lead or lag to unity at rated output; wider power factor range with slight derating.

FREQUENCY RANGE: Each amplifier model is rated at full power 45-6,000 Hz except for the models T15000A and T20000A which have a 300-500 Hz full power range. The operating output frequency range is determined by the particular plug-in oscillator which is used.

HARMONIC DISTORTION: Less than 3% over the entire 45 6,000 Hz amplifier range; less than 1%, 300-1000 Hz.

HUM AND NOISE: 60 db below maximum output voltage.

OUTPUT PHASE SEPARATION: 120 ±1° for fixed frequency models as well as 350-450 Hz models. 120 ±2° for 45-70 and 300-2,000 Hz models. 120 ±3° for 45-6,000 Hz models.

CONSTRUCTION: Models rated 300VA to 2500VA are standard 19″ rack mount units with full dust covers. Bench adapters available as accessories for these models; specify suffix (—C). Side support is recommended for rack mount models. Slides are available as optional accessories; specify suffix (—S). 5VA-20KVA models are furnished complete in cabinet enclosure.

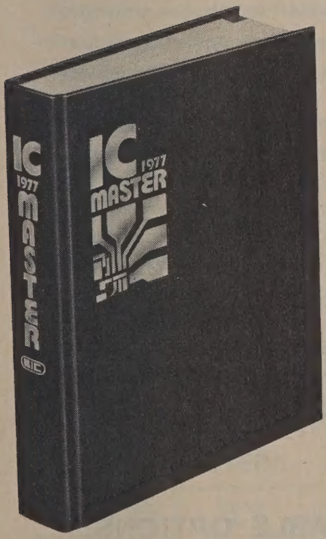
WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

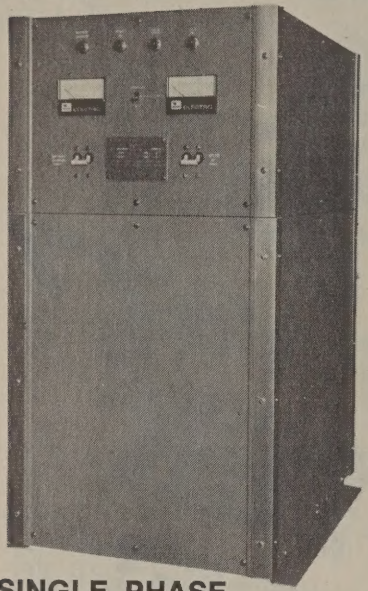
The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

United Technical Publications, 645 Stewart Ave., Garden City, NY 11530

1φ UNINTERRUPTIBLE 3φ POWER SYSTEMS



The Nova Uninterruptible Power System is a solid state system designed to provide uninterrupted A.C. power to critical loads. Systems 2.5 KVA and up carry a THREE YEAR WARRANTY!

Nova high efficiency systems, 85% typical, minimize battery requirements. Nova systems utilize smaller battery systems than those used to power comparable competitive systems.

Small size and relatively light weight minimize floor space and floor loading.

Deliveries for many systems range from stock to 30 days.

*Add standby time to model number (10 mins. = 10M; 2 hours = 2H).
All weights and dimensions excluding batteries.
For 50 Hz. models change model numbers as follows:
"60" in model no. to "50" or "3/6" to "3/5".

SPECIFICATIONS:

Input: 115, 230 480 VAC, 1φ or 3φ (others)
Frequency: 60 Hz., 50 Hz.
Voltage Regulation: ±1%
Frequency Regulation: ±0.15%
Power Factor Range: 0.7 lead to lag

Distortion: Less than 5% THD
Efficiency: 85% typical
Temperature: −20° to +50°C
Current Limited
Thermal Protected

AVAILABLE OPTIONS:

- Alarms and alarm contacts
- Solid State or Electro-Mechanical Transfer Switch
- Manual Bypass
- Meters
- Extended Back-up Time

1φ FREQUENCY CHANGERS 3φ

125 VA to 30 KVA, 1φ and 3φ
115 VAC, 220 VAC, 240 VAC, others
Sine Wave Output — 50, 60, 400 Hz.
Specifications same as Inverters on opposite page.

SPECIFICATIONS:

Output:

Voltage: 115/230 VAC 1ϕ (others) 115/200, 3ϕ (others)

Voltage Regulation: ±1% for line or load

Voltage Adjustment Range: ±10% of nominal

Frequency Regulation: ±0.15% for line and load

Frequency Adjustment Range: ±5% of nominal

Frequency/Temperature Coefficient: 0.01% per °C.

Transient Response: less than 50 mSec for 100% Load Change

Maximum Distortion: less than 5%

Efficiency: 75% (except 12 and 24 volt models) 90%-2.5 KVA and up

Load Power Factor: .7 lead or lag

CIRCUIT PROTECTION:

Reverse input polarity protection

Short circuit protection

Output automatic current limited

Thermal protected

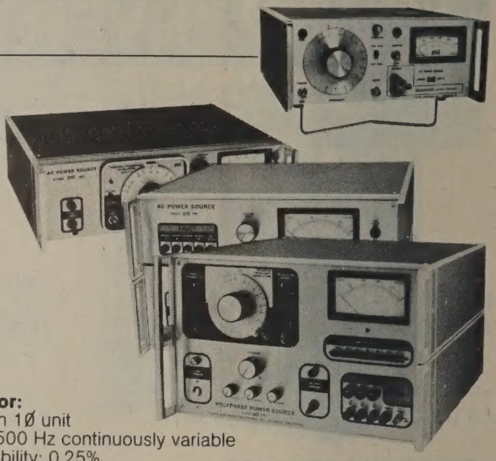
PACIFIC A.C. POWER SOURCES

FREQUENCY CHANGERS / LINE CONDITIONERS

LIGHTWEIGHT PORTABLES / 250 VA-1.5 KVA

laboratory bench-top units / ***D Series***



MODEL 105-D

MODEL 315

PACIFIC D Series units are lightweight, versatile, and fully instrumented for laboratory use. Units exhibit low acoustic noise, cooled by forced air with intake and exhaust on rear panel (250 A exhaust on bottom). Models are attractively styled in brown vinyl, aluminum cabinets. Rack mount tabs are available for all units.

PERFORMANCE SPECIFICATIONS:

Output Voltage: Variable 0-125 vrms. Three phase units are variable 0-125 vrms line-to-neutral 3 phase WYE. Other voltages, or 30 DELTA connection, available as options.

Output Current: Each unit rated for continuous operation at maximum current (see derating curve on page 2).

Peak Current: Each unit delivers peak current of about 250% rated rms current when driving non-linear (rectifier-capacitor power supply) load, without clipping voltage waveform.

Response Time: 50 microseconds

Frequency Range: 20-2,000 Hz full power.

Bandwidth: 10 KHz small signal (typical).

Power Factor: Any (see derating curve).

Isolation: Fully isolated (floating) output.

Load Regulation: 0.75% max.

Line Regulation: 0.25% max.

Distortion: 0.75% max.

Line Conditioning: 80 db common mode rejection. Internal storage eliminates most short duration line transients (see curve on back page).

Hum and Noise: 0.25% max.

Overload Protection: Fuses plus electronic current limiting into external shorts or surge type loads, recovery is automatic.

Panel Metering: Panel meters read volts to 3%, amps to 6% of I max (250-A is metered for volts only). Three phase units meter line-to-line volts, line-to-neutral volts, amps in each leg.

Efficiency: 60% max.

Internal Oscillator:
Standard in each 10 unit
Range: 47 to 500 Hz continuously variable
Frequency Stability: 0.25%
Standard in each 30 unit
Range: 47 to 500 Hz continuously variable
Frequency Stability: 0.25%
Plus three selectable fixed frequencies of 1% accuracy, 0.02% stability. Frequencies set to 50, 60, and 400 Hz, unless otherwise specified.
Oscillators with non-standard frequency range, or precision fixed frequencies, available on request.

External Input: External signal input with 100 v/v sensitivity standard on single phase units. Available as option on 30 units.

Phase Angles Accuracy (three phase units only): Each 30 machine produces three power vectors separated in phase angle by 120° (Std. 30 power), 90°, or 0°. Phase angles are maintained to ±1°.

Temp Range: 0-45°C operating, −25 to +85°C storage.

Overtemp Protection: Turns off unit (except for cooling fan) when internal temperatures exceed limits. Operation resumes automatically.

Input Power: 105-125v, 47-63 Hz 10 is standard for models 250-A, 105-D and 110-D. 210-250V is standard for all other models. Any unit can be connected for 110 or 220 volt input. Options available for very low line (below 105 volts) or for 400 Hz input.

BENCH-TOP/*Series D*

- **250 VA to 1.5 KVA IN COMPACT, ULTRA-LIGHTWEIGHT PORTABLES**
- **FULL POWER CONTROL AND PANEL METERING**
- **FIT STANDARD RACKS AND CHASSIS: RACK MOUNT TABS AVAILABLE FOR ALL MODELS**
- **HANDSOME STYLING IN ALUMINUM CABINETS WITH BROWN VINYL PANELS**

D SERIES

Model	VA	Output Current Amps	Phase	Size* HxWxD	Weight Lbs.
250-A	250	2	1	5¼x12x13	30
105-D	500	4	1	5¼x17x13	40
110-D	1 KVA	8	1	10½x17x17	80
315	1.5 KVA	4 per Leg	3	10½x17x17	55

**dimensions shown in inches*

ECONOMY/*SERIES H*

"H" series power sources are designed for fixed parameter, OEM applications. Power circuits are virtually identical to the "D" series units. Units have minimal panel controls, no panel meters, and are housed in economy styled, rack-mount cabinets. All of the "D" series specifications apply except that panel controls are restricted to: ON-OFF CONTROL input circuit breaker, or switch plus fuse; AMPLITUDE−0 to 125 VRMS by panel screwdriver adjustment; INPUT FUSE; OUTPUT LAMP−Indicates presence of output power. Internal oscillator is factory set to user specified frequency. Frequency stability is 0.02%/10 hrs., 0.10%/30 days. Amplitude stability is 1% 30 days.

- **HIGH-RELIABILITY PERFORMANCE IN COMPACT, RACK-MOUNT UNITS**
- **FACTORY-SET INTERNAL OSCILLATOR TO USER FREQUENCY**
- **FREQUENCY STABILITY 0.02%-10 HRS., 0.10%-30 DAYS**
- **AMPLITUDE STABILITY 1%-30 DAYS**

A.C. POWER SOURCES PACIFIC

WORLD LEADER IN A.C. POWER SYSTEMS TECHNOLOGY

MULTI-KVA POWER SYSTEMS / 2 KVA & UP

*single and 3-phase units/**M Series***

Series M machines cover the range of 2 to 27 KVA single or three phase. All Series M machines are assembled from building blocks of self-contained 1 KVA Power Amplifier Modules, and can therefore be configured in a large variety of forms. Three phase machines with added capacity in one leg for single phase loads are a common variation, as are machines with both WYE and DELTA output simultaneously available.

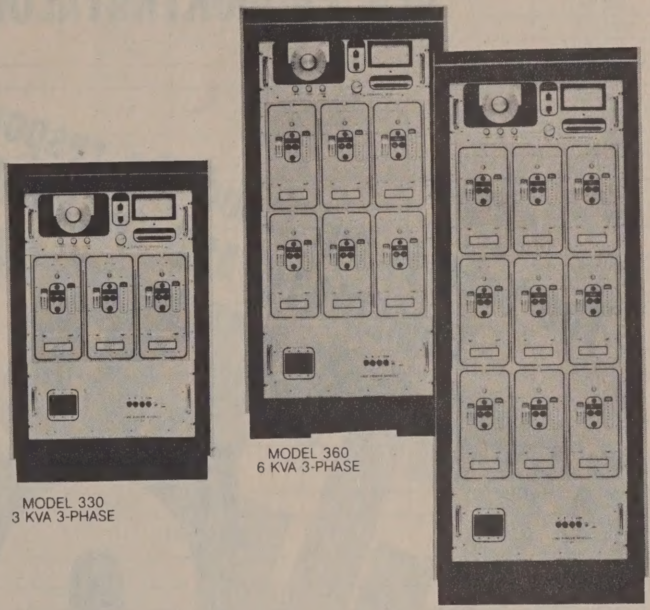
Units may be provided in single phase/three phase convertible machines. To obtain any variant form only the common Control Module is changed–the Power Amplifier Modules employed are always the same.

POWER AMPLIFIER MODULE

Each 1 KVA Power Amplifier is a small lightweight and easily installed Module (5x12" panel dimensions, weight is 30 lbs). Each module has completely redundant circuitry, its own internal power supply, fail-safe disconnects, thermal cutout and output ON/OFF control. Since each module is totally isolated, it can be connected in three phase configurations. Also, any of the three phase legs can consist of any number of modules in parallel for added power capacity. There is no limit to the number of modules which can be paralleled.

Each module is equipped with "self-healing"* output stage which disconnects output transistors which may have randomly failed. Each module has a special input circuit so that failure anywhere within the module cannot load input signals and cannot prevent operation of other modules.

Systems using multiple parallel modules can attain unprecedented reliability levels.



MODEL 330
3 KVA 3-PHASE

MODEL 360
6 KVA 3-PHASE

MODEL 390
9 KVA 3-PHASE

PERFORMANCE SPECIFICATIONS:

Output Voltage (1Ø): Variable 0-125 vrms. Other voltages available.

Output Voltage (3Ø): 0-125 volts line-to-neutral 3Ø WYE, 3Ø DELTA and/or other voltages are also available to user.

Output Current: Each unit is rated for continuous operation at the specified maximum current (see derating curve page 2). Rated current is 8 amps times the number of modules in parallel.

Peak Current: Maximum peak current available at the crests of the sine wave is approximately 20 amps times the number of modules in parallel.

Response Time: 50 microseconds.

Frequency Range: 20-2,000 Hz. Full Power.

Bandwidth: 10 KHz small signal (typical).

Power Factor: Any (see derating curve).

Isolation: Fully isolated (floating) output.

Load Regulation: 0.25% Max.

Line Regulation: 0.1% Max.

Distortion: 0.75% Max.

Line Conditioning: 80 db common mode rejection.

Line Surge: Special circuits prevent excessive line surge during turn on.

Hum and Noise: 0.25% Max.

Output Protection: Fuses plus current limiting with automatic recovery.

Panel Metering: Fully metered for volts (±3%) and amps (±6% of maximum current).

Efficiency: 60% Max (varies with P.F. and output voltage).

Internal Oscillator: Same as "D" Series.

External Input: Same as "D" Series.

Phase Angles/Accuracy: Same as "D" Series.

Temp Range: 0-45°C inlet air temp.

Cooling: Each 1KVA module has individual forced air cooling. Intake and exhaust are at the rear.

Input Power: User may designate any of the following inputs available as standard configuration:
- Form A–
  240 V 3Ø DELTA 50-60 Hz.
- Form B–
  120 V 3Ø DELTA 50-60 Hz.
- Form C–
  120/208 V 3Ø WYE 50-60 Hz.
- Form D–
  440 Volts 3Ø DELTA 50-60 Hz.

The following standard forms are available at additional cost:
- Form E–220 V 1Ø 50-60 Hz.
- Form F–110 V 1Ø 50-60 Hz.
- Form G–400 Hz. input.
- Form H–DC input.

Unless otherwise specified all series M units are delivered with Form A input connection.

SINGLE PHASE OUTPUT SYSTEMS

Model	VA	Amps	Dimensions HxWxD	Weight Lbs.
120	2 KVA	16	36x23x27	210
130	3 KVA	24	36x23x27	240
160	6 KVA	48	56x23x27	400
190	9 KVA	72	72x23x27	550

3 PHASE OUTPUT SYSTEMS

Model	VA	Amps Per Leg	Dimensions HxWxD	Weight Lbs.
330	3 KVA	8	36x23x27	240
360	6 KVA	16	56x23x27	400
390	9 KVA	24	72x23x27	550

Base price of 10 and 30 units includes cabinet enclosures with casters for portability.

Overtemp Protection: Each individual module turns off with internal overtemp. When OFF, load may be absorbed by other modules operating in parallel. Recovery is automatic.

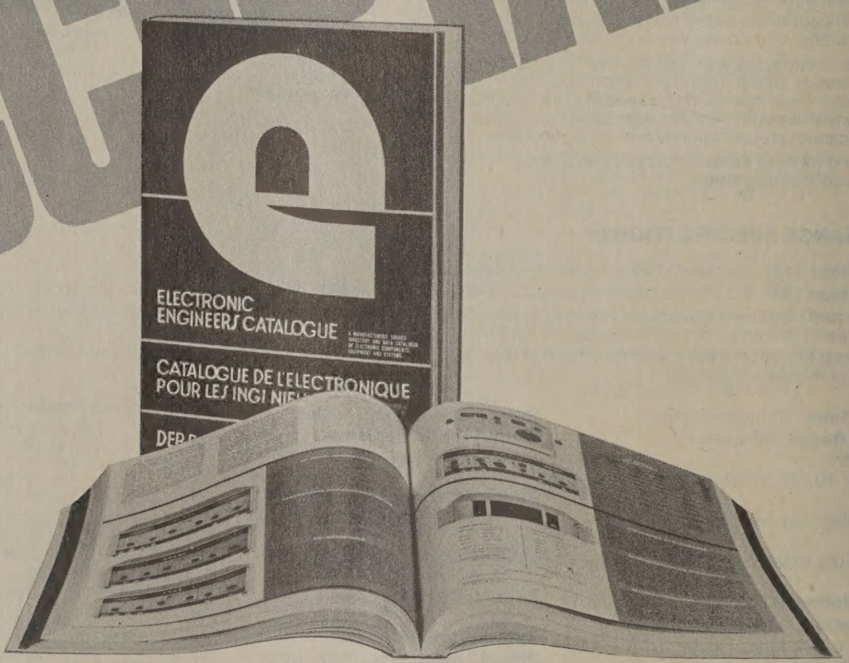
ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKATALOG FÜR ELEKTRONIKER

The book is out...and the response is in...
IMMEDIATE AND OVERWHELMING

ACCEPTANCE



e
ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGI NI
DER

The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to - and from - Western Europe and the United Kingdom.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 products alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

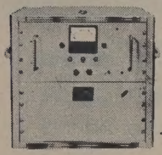
The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe and the United Kingdom. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. 645 Stewart Avenue, Garden City, New York 11530 / 516 222-2500

STABILINE® automatic VOLTAGE REGULATORS

TYPE IES9101

TYPE EMT10228



TYPE EMT4115B

Deliver a constant output voltage regardless of variations in input voltage or changes in line current. Types available from 0.25 to 275 kva. Submit specifications for ratings desired but not given in the charts. Input voltage ranges shown are at nominal output voltage; input range shifts with output voltage setting.

EMT SERIES — Electro Mechanical Transistorized types with virtually zero waveform distortion, 47-63 hertz frequency range, very low internal impedance, negligible phase shift and efficiency approximately 99%. Rated accuracy ±.75% for all line voltage or load current variations within unit stated range. Insensitive to load magnitude and power factor; no effect on system power factor.

EMS SERIES — Electro Mechanical Transistorized types for heavier load requirements. Same operating characteristics as EMT Series. Units with letter I before first digit in type number have individual control for each line-to-neutral voltage.

EMK SERIES — Electro Mechanical Transistorized types providing faster correction times than other electromechanical models.

IES SERIES — Instantaneous Electronic Solid-State types having extremely fast correction, no moving parts. Will maintain output voltage within a 100 millivolt rms band for any combination of rated input voltage and/or load from 1.0 to 0 power factor lagging. Efficiency to 95%. All units have provision for remote sensing and have plug-in solid-state circuit boards.

MILITARIZED — Meet requirements of applicable military specifications. Type EMTH41007MH is 3½ x 6 x 4½"; type EM4108MCR fits standard 19" relay rack. Accuracy ±1.0%.

STABILINE®

Full Range REGULATOR CONTROLLERS

Designed for use with any motor-driven POWERSTAT Variable Transformer to provide full range regulation of a-c voltage, a-c current or d-c voltage. Output voltage will remain within a 2-volt band when used with 120 volt units and a 4-volt band when used with 240 volt models. Output current can be maintained within ±1% of maximum current setting with user supplied current transformer and Superior Electric transformer T6340. Type FR501DC and user supplied d-c power will provide regulated d-c voltage.

▲At 400 Hertz
†Also available as rack model (suffix R when ordering).
¶For 60 Hertz operation only.
*Can also be operated on an input range of 95 to 135 volts with a rating of 57 amperes, 6.6 kva and a correction rate of 0.075 seconds per volt.
§Also available as rack (suffix R when ordering) or wall mounted (suffix W when ordering) models.
‡Unit can be converted for 208 volt operation by simple tap changes. Input and output voltage ranges change proportionally.
**At nominal output. Shifts with output voltage setting but not proportionally.
††Also available in open construction (suffix U) and with screened and enclosed (suffix UT) construction.
‡‡At nominal output. Shifts proportionally with output voltage setting.

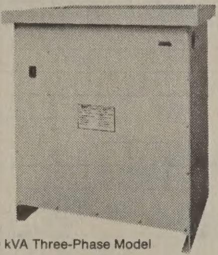
98% EFFICIENT AC LINE REGULATORS

500 VA to 100 kVA



100 kVA Three-Phase Model

FEATURES

- **Saves Energy**
- **98% Efficiency**
- **Fast Response**
- **Low Distortion**
- **Small Size**
- **Low Cost**

TOPAZ AC LINE REGULATORS SAVE MONEY SIX WAYS:

- Lower Purchase Cost…more product features and benefits for the dollar
- Lower Operating Costs…98% efficiency from no load to full load provides significant dollar savings by minimizing power losses
- Lower Installation Cost…less than 1/4 the size and weight of most regulators… requiring less installation manpower and floor space
- Lower Feeder Hardware Cost…negligible effect on power factor eliminates need to oversize input circuit breakers and other feeder hardware to handle additional reactive kVA generated by other regulators
- Lower Air Conditioning Costs…other ac line regulators generate up to nine times more heat losses…air conditioning power demand is substantially reduced when using Topaz regulators permitting installation of smaller, less expensive air conditioning equipment
- Lower Power Factor Correction Costs…the high input power factor of Topaz regulators results in improved overall plant power factor and reduces the need for expensive power factor correction equipment

SERIES 73000 AC LINE REGULATORS are intended for use in installations requiring close regulation of power lines subject to normal operating fluctuations. Output voltage is regulated to within ±3.3% of nominal.

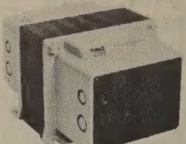
Topaz line regulators are the smallest, lightest, most efficient, distortion-free devices commercially available for regulating ac power. Problems of low efficiency, wasted power and frequency sensitivity inherent in ferroresonant devices have been eliminated in these regulators.

1.5 kVA Single-Phase Model



4 kVA Single-Phase Model

FEATURES AND BENEFITS

ENERGY SAVINGS

The design of Topaz AC Line Regulators is directed toward one of the most serious problems in line voltage regulation…that of wasted power. The 98% efficiency of Topaz AC Line Regulators reduces the amount of energy consumed in the regulation process and also reduces the cost of associated equipment, including feeder hardware (on larger units) and air conditioning.

FAST RESPONSE

Topaz AC Line Regulators respond to voltage fluctuations much faster than most other voltage regulators. Sensing circuitry constantly monitors line voltage and corrects for changes in less than one cycle of the operating frequency.

LOW DISTORTION

Most commercially available line regulators distort the output waveform by as much as five percent and many types cause distortion on the input power line. Distortion can adversely affect sensitive loads. Topaz regulators add less than 0.1% distortion.

INPUT POWER FACTOR

Topaz AC Line Regulators have a negligible effect on power factor. They reflect, almost exactly, the power factor of the load. All other line regulation techniques, with the exception of the motor driven variable autotransformer, have a substantial detrimental effect on power factor.

WIDE INPUT FREQUENCY RANGE

Topaz AC Line Regulators operate over a broad range of input frequencies (47-63 Hz). In contrast, ferroresonant regulators are highly sensitive to input frequency fluctuations and stop regulating when outside their narrow frequency range.

SIZE AND WEIGHT

Topaz AC Line Regulators are approximately ¼ the size and weight of ferroresonant transformers, facilitating handling and requiring minimal installation space.

TYPICAL EQUIPMENT AND SYSTEMS USING TOPAZ AC LINE REGULATORS

- Computers
- Video and Audio Equipment
- Instrumentation
- Communications Equipment
- Medical Monitoring Systems
- Process Control
- Utility Power Control Rooms
- Computerized POS Systems
- Life Support Systems
- Mobile Broadcasting Equipment

SPECIFICATIONS

Line Voltage Regulation:
±3.3% maximum for series 73000
±5% maximum for series 75000
±7% maximum for series 77000

Efficiency:
98% minimum

Operating Temperature:
0°C to 50°C

Temperature Coefficient:
0.05%/°C maximum

Output Distortion:
No spike; adds less than 0.1% Total Harmonic Distortion

Response Time:
1 cycle maximum

Operating Frequency:
47-63 Hz, sine wave

Load Regulation:
Less than 1% from no load to full load

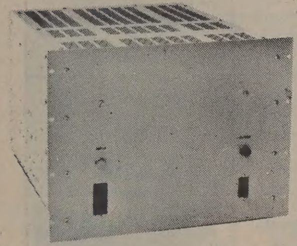
DC to AC SINE WAVE INVERTERS FREQUENCY CONVERTERS

200 VA to 30 kVA

GZ & FZ SERIES

Input Protection:
High and low voltage
Reverse polarity
Static Regulation:
Line Regulation: ±1% maximum for line variations between low line and high line, at half load.
Load Regulation: ±2% maximum for load variations between no load and full load, at nominal line.

Frequency Stability:
±0.5% of fixed frequency; ±0.01% optional
Output Protection:
Overload and short circuit
Total Harmonic Distortion:
Less than 5% at full load and nominal line
Operating Temperature:
-10° C to +55° C
Inverter Efficiency:
Typically 70% at full load



GX & FX SERIES

Input Protection:
High and low voltage and reverse polarity
Static Regulation:
Line Regulation: ±1% maximum for line variations between low line and high line, at half load.
Load Regulation: ±2% maximum for load variations between no load and full load, at nominal line.

Frequency Stability:
±0.5% of fixed frequency; ±0.05% optional
Output Protection:
Overload and short circuit
Total Harmonic Distortion:
Less than 5% at full load and nominal line
Operating Temperature:
-10° C to +55° C
Inverter Efficiency:
Typically 75% at full load
Recovery Time:
50 milliseconds for 20% load change

INPUT SPECIFICATIONS:

Nominal Input Voltage	Product Series	Voltage Range
12/24 VDC	GZ	11 to 15 or 22 to 30
28 VDC	GZ	24 to 32

UNINTERRUPTIBLE POWER SYSTEMS

300 VA to 15 kVA

SPECIFICATIONS:

INVERTER OUTPUT

Sinusoidal, with 5% total harmonic distortion.
10% voltage overshoot/undershoot for 20% instantaneous load change.

PROTECTION

Input power has fuse or circuit breaker protection.
Undervoltage protection on all inverters.
Reverse polarity protection on all inverters.
Current limiting on all chargers.
Overload and short-circuit protection on all inverters.

AUTOMATIC LOAD TRANSFER

25 millisecond transfer (typical). Panel light indicates that load is powered by the ac line.
4 millisecond switch optional most models.

Notes: 1. Sealed internal batteries are supplied as part of this model. External batteries may be connected in parallel with the internal batteries, thus extending the backup and recharge times. Battery information is available on request.
2. External batteries are not supplied with the basic system. External batteries may be procured from Topaz with the basic system or purchased from another source.
3. Backup times for internal batteries are specified for 25°C operation. Shorter times can be expected at lower temperatures.

ALSO AVAILABLE: Low Cost 300 VA Models

300	9234*	120	1	120	1	2.6A	60	External 12V (Note 2)	Dependent on battery	3 Amperes	7″ H. 7″ W. 5.5″ D.	13 lbs. Plus battery

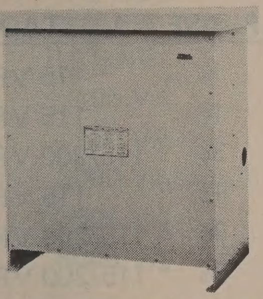
ULTRA-ISOLATION NOISE-SUPPRESSION TRANSFORMERS

125 VA to 130 kVA

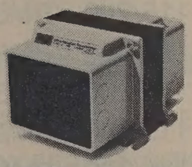
PROTECT SENSITIVE EQUIPMENT FROM POWER LINE NOISE

Featuring:

- **Clean, Noise-Free Power Output**
- **Unique Triple Box Shielded Design**
- **Low Coupling Capacitance**
- **Guaranteed Performance**
- **Topaz Quality**



ENCASED TYPE, available in 75 to 130 kVA ratings, three-phase



ENDBELL TYPE, available in ratings from 125 VA through 5 kVA single phase

LINE CORD/RECEPTACLE TYPE, available in ratings from 125 VA through 2.4 kVA

APPLICATIONS

- Isolating sensitive equipment from noisy power lines
- Isolating noisy equipment from sensitive equipment sharing the same power line
- Minimizing common-mode noise
- Minimizing transverse-mode noise resulting from common-mode noise at the input
- Complete electrostatic shielding

Many of today's electronic equipment and systems are sensitive to line voltage transients and spikes caused by utility feeder switching, lightning, air conditioning and other sources of noise. Topaz Ultra-Isolation Transformers prevent these transients from reaching sensitive equipment. A unique box shielding technique reduces capacitive coupling from primary to secondary to less than 0.0005 picofarads. This low capacitive coupling provides a common-mode noise rejection ratio of over ten million to one.

A full line of single-phase and three-phase models is available from 125 VA to 130 kVA. Topaz Ultra-Isolation Transformers may be used alone or in conjunction with Topaz AC Line Regulators.

TYPICAL EQUIPMENT AND SYSTEMS USING TOPAZ ULTRA-ISOLATION TRANSFORMERS

- Computers and Computer Peripherals
- Instrumentation
- Process Control
- Digital Communications
- Telemetry
- Audio and Video Recording

STANDARD ULTRA-ISOLATION TRANSFORMERS

SINGLE-PHASE MODELS—All Topaz standard endbell type and encased type Ultra-Isolation Transformers are manufactured with dual-voltage primary and secondary windings and are rated for operation at either 50 or 60 Hz. For maximum versatility, the dual-voltage windings permit hookup in any combination of the listed voltages—one to one, step-up or step-down. Single-phase transformers are available in three styles:

TERMINAL STYLE: Available in all power ratings. Transformers are supplied with terminals or lugs for direct-wired installations. Wiring instructions are included with each transformer.

LINE CORD/RECEPTACLE STYLE: Available on models with power ratings through 2.5 kVA. Transformers are supplied prewired in a 120 V-120 V configuration. There is a plug on the six foot input line cord and a standard 120V receptacle on the secondary.

125 VA through 500 VA models have a NEMA 5-15P plug attached to the input cord and a NEMA 5-15R output receptacle.

1 kVA models have a NEMA 5-15P input plug and a duplex NEMA 5-15R output receptacle.

2.4 kVA models are limited to 20 amperes input and have a NEMA L5.20P twist lock input plug and a duplex NEMA 5-15R output receptacle.

THREE-PHASE MODELS— Standards models are available prewired for specified operating voltages.

NON-STANDARD ULTRA-ISOLATION TRANSFORMERS—The following list includes all standard transformers. Transformers can be designed and manufactured to suit a full range of special requirements. Please contact Topaz for additional information.

Typical Specifications: Standard 50/60 Hz Single-Phase Models

Common-Mode Noise Attenuation: .005 pF—126 dB; .001 pF—140 dB; .0005 pF—146 dB

DC Isolation: 1000 megohms winding-to-winding and winding-to-ground

Dielectric Strength: 1000 VAC minimum

Electromagnetic Noise: Less than 0.11 Gauss (20 dB) at 18″ distance

Operating Voltages: To 110% of nominal

Operating Frequency: 50/60 Hz

Other Models Available: 400 Hz

Unitron has supplied its products and services to meet the requirements of virtually every type of power application existing in todays world of modern technology, from commercial applications to the most exacting military requirements.

FEATURES:

- MIL SPECIFICATIONS (Standard power)
- FEDERAL & NATIONAL STOCK LISTED
- LIGHT WEIGHT
- RFI PROTECTION
- HIGH EFFICIENCY
- LOW DISTORTION
- LOW AUDIO NOISE
- LONG MAINTENANCE FREE OPERATION
- SHORT CIRCUIT & OVERLOAD PROTECTION

What can I use to keep all the manufacturers' product data I receive in order?
What system makes filing or retrieving manufacturers' catalogs fast and easy?
Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:
For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:
United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

Adlake relays are designed and built to meet the most exacting demands of the electronic/electrical industry. All the care required for the manufacture of high-grade instruments is used to produce Adlake relay components. Serving a worldwide market through manufacturer's representatives and franchise distributors, the Adams and Westlake Company is ready to supply you with the superior features of long life and quality in relay components.

FORMERLY: OFF-THE-SHELF CATALOG
THE ONLY NATIONAL CATALOG OF ELECTRONIC PARTS, INSTRUMENTS AND EQUIPMENT DESIGNED EXCLUSIVELY FOR DISTRIBUTORS AND THEIR CUSTOMERS.

YESTERDAY'S RADIO MASTER IS TODAY'S

ELECTRONIC DISTRIBUTORS MASTER CATALOG

Known as O-T-S, OFF-THE-SHELF CATALOG until this edition, the MASTER CATALOG encompasses the following product areas: audio and communications equipment; electromechanical components; electronic circuit components and subassemblies; panel components and hardware; production equipment and tools; test instrumentation; power sources; wire and cable; and related materials and chemicals.

The MASTER CATALOG is broken down into four basic sections. **A GENERAL INDEX** which lists manufacturers and products alphabetically. **A MANUFACTURERS' CATALOG SECTION** which displays their respective product pages and lists their addresses and phone numbers. **A MANUFACTURERS' DIRECTORY,** where participating manufacturers, again listed alphabetically with addresses and phone numbers, highlight their distributors. And a **GEOGRAPHIC DISTRIBUTORS' DIRECTORY** which includes the names, addresses and phone numbers of the local distributors nationwide which stock the products of manufacturers whose data appears in the "Manufacturers' Catalog Section."

ELECTRICAL SPECIFICATIONS

Contact Rating: Noninductive load
Light Duty (Code L): Fine silver goldplated — low level to 2 amps @ 26 VDC or 1 amp @ 115 VAC
Heavy Duty (Code H): Silver cadmium oxide — 5 amp @ 26 VDC or Electrical: 10^6 at rated load
Other contact material available

Life Expectancy: Mechanical Operations: 10^8
Electrical: 10^6 at rated load

Contact Resistance: 50 milliohms max. initially
200 milliohms at end of life

Operate Time: At nominal coil voltage or current $\leq$ 8ms

Release Time: At nominal coil voltage or current $\leq$ 3ms

Contact Bounce: At 10 ma contact current:
2ms typ. at operate, N.O. contacts
3ms typ. at release, N.C. contacts

Dielectric Strength: 1000 Vrms; 500 Vrms across contact gap

Insulation Resistance: 10,000 megohms minimum @ 25°C, 100 VDC, 50% RH; Special insulation with 10^{14} ohms available

Coil Temperature: Max. 105°C (220°F)
Max. continuous coil dissipation 2.3W at 20°C.

Ambient Temperature
Operating: −55°C (−72°F) to 80°C (175°F) @ nominal operating voltage
Storage: −55°C (−72°F) to 105°C (220°F)

Vibration: Operating: .062 DA @ 5-55 Hz; 10 g @ 55-110 Hz
Non-Operating: 10 g @ 5-500 Hz

Shock: Operating: 20 g @ 11ms
Non-Operating: 30 g @ 11ms

Weight: 23 to 35 grams (approx. 1 oz.)

SOCKET ORDER INFORMATION

THINPAK® Miniature Relays/AZ1530 Series

Up to 4PDT Contacts — 1, 2 or 5 Amp

For PC Board Mounting — 0.6″ center-to-center
Sealed plastic dust cover on 1 and 2 pole relay.

The AZ miniature THINPAK relay has been designed for applications with either demanding space limitations, such as 0.6″ center-to-center PC card mounting, or operating requirements that cannot be met by reed relays or conventional contact type relays. The high pressure 1, 2, or 5 amp contacts enables the unit to switch capacitance or lamp loads with current spikes that would normally weld the contacts of reed relays. The high sensitivity, long life and insulation resistance of more than 10^{10} ohms makes it an ideal unit for galvanic separation between electronic circuits.

The 1 and 2 pole relays have a plastic dust cover ultrasonically welded to the baseplate to protect the inside from flux and cleaning agents during machine soldering and spray or vapor cleaning.
UL Component Recognition File E43203A

Contact Rating: Noninductive load

Light Duty: (1 Amp)	Fine silver goldplated 1 Amp @ 26 VDC or 0.5 Amp @ 115 VAC
Medium Duty: (2 Amp)	Silver Cadmium-Oxide 2 Amp @ 26 VDC or 1 Amp @ 115 VAC

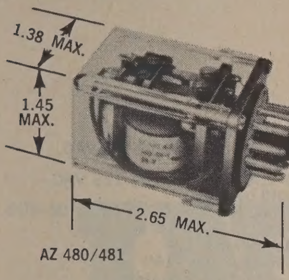
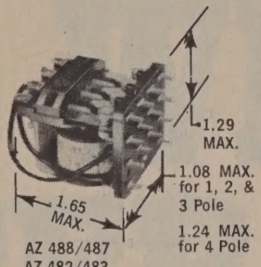
General Purpose Relays/AZ480 Series

Up to 4PDT Contacts — 10 Amp

U/L Recognized (File No. E44211)



AZ 480/481



AZ 488/487
AZ 482/483

AZ 480 relays are available in either an open or plastic enclosed version. The open relay, with either solder or PC terminals, can be mounted with an attached base plate or with a 6-32 tapped hole in the core. It also can be supplied with a 6-32 mounting stud and locating tab. The relay enclosed in a plastic dust-cover is available either as a plug-in version with octal type socket (8 or 11 pins), or with PC terminals.

Contact Rating: 10 amp @ 115 volts AC 60 Hz non inductive
Contact Material: Silver-cadmium-oxide
Contact Arrangement: 1, 2, 3 and 4 form C (up to 4PDT)
Life Expectancy: Mechanical: 10 million operations
Rated Load: ¼ million operations
Dielectric Strength: 1500 Vrms
500 Vrms across contact gap
Insulation Resistance: 100 megohms minimum
Coil Voltage: To 280 volts AC
Coil Power: Nominal — DC: 1.2 watts — AC: 2.5 VA
Max. Continuous Dissipation: 2.5 watts @ 35°C (95°F) ambient temperature

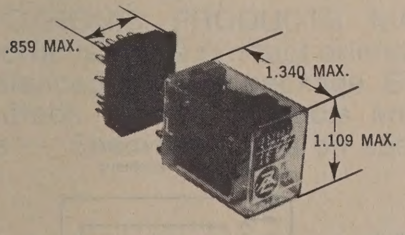
* Also available with #6-32 UNC-2A mounting stud and locating tab (add letter "A" to part no.) or with #6-32 UNC-2B tapped core and locating tab (add Letter "B" to part no.) Add letter "U" to above P/N for UL Approved Versions.

Miniature AC, DC Relays/TEC1300 Series

4PDT Contacts — 5 Amp

U/L Recognized (File No. E45020) / CSA File No. 31387

The miniature relay series 1300 with AC or DC coils and 4PDT contacts, available with either plug-in or PC terminals, is ideally suited for use in alarm systems, communications, and data processing equipment.



Contact Rating: Resistive Load 5 amp at 26 VDC or 115 VAC*

Contact Material: Silver gold plated. Other contact material available

Contact Arrangement: 4 form C (4PDT)

Life Expectancy: Mechanical Operations: 10^8

Electrical Operations: At Rated Load: 5 x 10^4
At 3 Amp 26 VDC or 115 VAC: 10^6

Dielectric Strength: 1500 Vrms; 500 Vrms across contact gap

Insulation Resistance: 1500 Megohms min. @ 20°C, 100 VDC, 50% RH

Coil Power at 20°C:
AC: 1.20 Va nom. ; 2 Va max. continuous
DC: .90 Watts nom.; 2 Watts max. continuous

Coil Temperature: Max. 105°C

Weight: Approx. 42 gr. (1.5 oz)

Terminals: Solder lug/plug-in or PC on relay
Solder lug or PC on socket

Enclosure: Clear, high impact polycarbonate cover

THINPAK® Miniature Relays/AZ1630 Series Magnetic Latching

Up to DPDT Contacts — Dry Circuit to 2 Amp

For PC Board Mounting — 0.6″ center-to-center.
Sealed Plastic Dust Cover.

The THINPAK Series AZ 1630 magnetic latching relay, is a miniature memory relay which can be operated with an impulse of more than 10 ms and store the information indefinitely without power consumption. This makes it an ideal component for economical low-bit memory systems such as that needed for tool machines, elevators, packaging and vending machines, aircraft and car simulators, etc. The construction of the relay and selection of materials assures that the status of the relay cannot be changed by mechanical vibrations or shock, up to specified limitations. The N.O. side of the contact closes after energizing the operating coil with a DC pulse. The contact switches to the opposite position by energizing the release coil. In standard versions, both coils use the same operating voltage, which allows energizing and de-energizing the relay from the same voltage source. The high pressure 1 or 2 amp contact enables the unit to switch capacitance or lamp loads with current spikes that would normally weld the contacts of a reed relay. The high insulation resistance of more than 10^{10} ohms and the low contact resistance of less than 50 mΩ make it ideal for galvanic separation between electronic circuits.

The relays have a plastic dust cover ultrasonically welded to the baseplate to protect the inside from flux and cleaning agents during machine soldering and spray or vapor cleaning. Cleaning by immersion is not recommended.

Contact Rating:	Noninductive load.
Light Duty:	(Fine silver goldplated.) 1 Amp @ 26 VDC or 0.5 Amp @ 115 VAC.
Medium Duty:	(Silver cadmium oxide.) 2 Amps @ 26 VDC or 1 Amp @ 115 VAC.
Dry Circuit:	(Silver hard gold overlay.) Dry circuit or low level to 0.2 Amp @ 26 VDC or AC.
Life Expectancy:	Mechanical Operations: 10^5 Operations at Rated Load: 10^6.
Contact Resistance:	50 milliohms maximum initially.
Operate Time: (Typical)	3 ms at nominal voltage.
Release Time: (Typical)	2 ms at nominal voltage.
Contact Bounce: (Typical)	At 10 mA contact current: 2 ms at operate N.O. side. 4 ms at reset N.C. side.
Capacitance: (Typical)	N.C. to movable 0.6 pF. N.O. to movable 0.9pF. Contact to coil 12 pF.
Dielectric Strength:	Contact-to-contact 500 Vrms. Contact-to-coil 500 Vrms.
Insulation Resistance:	10,000 megohms min. @ 20°C. 100 VDC, 50% RH.
Coil Temperature:	Maximum 105°C (220°F).
Ambient Temperature: Operating:	(at intermittent duty 20 sec. maximum on time. 100 sec. minimum off time). −5°C (23°F) to 40°C (104°F).
Storage:	−55°C (−72°F) to 105°C (220°F).
Vibration:	0.062 DA @ 10.55 Hz. 10 g @ 55-300 Hz.
Shock:	30 g.

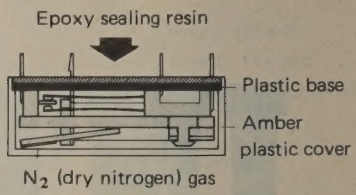
Amber Relays NFE, KE, HCE

What is the Amber Relay?

The NF, K and HC relay lines have found wide use and have proven their reliability over the past years. Nevertheless, certain applications have been restricted because of environmental factors, or because of printed circuit board fabrication processes employed. After much research and testing, the sealed versions of these relays have been developed; the Amber Relay line. These relays, with their high density seal and inert atmosphere considerably broaden the range of applications and can improve the reliability of your product at a reasonable cost.

Sealed construction



Major Features

1. Solution to PC board soldering and cleaning problems-costly hand soldering eliminated.
2. Highly stable contact resistance maintained, even after long periods of idle use.
3. Adverse environments—where sealed amber relays perform outstandingly!

R Relays

New kind of high speed SPDT reed relay

- High speed — up to 500 cycle/sec. operations
- Long life (mechanical) — more than 10^9 operations
- Large contact capacity — 1A 20VDC (power)
- Low operating power —
  80mW (Single side stable)
  40mW (Bistable 1 coil)
- Latching type available

Differences between General reed and R relays

	General reed relays	R relays
Structure	 Coil Glass reed capsule Contact (magnetic substance)	 Stationary contact Epoxy resin Coil Coil terminals "Getter" hole Moving contact Stationary contact Permanent magnet
Contact arrangement	1NC or 1NO contact	1NC contact
Contact capacity	5 to 10W	20W (high contact pressure)
Operating function	Single side stable	Single side stable Latching

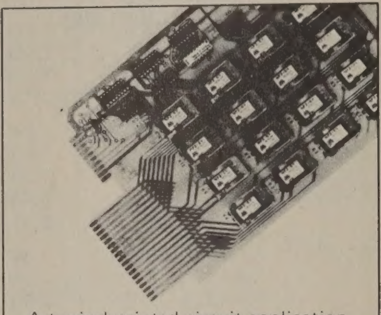
NF Relays

Flatpack with high sensitivity and reliability

- Low profile — stands only .402 inches high
  Ideal for high packaging density
- High sensitivity — Minimum operating
  NF2/140mW, NF4/235mW
- UL, VDE recognized
- Variety of available lines —
  Sealed Amber types
  MBB (Form D) contact types
  High breakdown voltage types for transient protection — 1,000 Vrms between open contacts, contact sets



A typical printed circuit application for microwave communication as designed by Granger Associates.

Typical Applications

NF relays are widely acceptable in applications where small size and high sensitivity are requirements. Such applications include:

Electronic equipment, Household applications, Alarm systems, Office machines, Communication equipment, Measuring equipment, Remote control systems, General control circuits, Machine tools, Industrial machinery, etc.

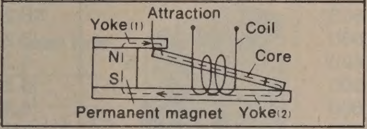
NC Relays

TTL compatible 5 AMP DIL relays

- Space saver — Flatpack and Lean line
- High contact capacity — 5A 250V AC
- Low operating power — 2C, 230 mW 4C, 460 mW (Single side stable)
- Soldering flux inflow prevented by terminal location
- Latching type available
- High breakdown voltage for transient protection — 1,000 Vrms between open contacts, contact sets
- Patented in U.S.A. Patent No. 3950718

Magnetic Structure



NC relays are constructed in a manner which makes the most efficient use of the magnetic forces inherent to the relay. No springs or other mechanical devices are employed to transfer contacts: all forces are magnetic, either attracting or repelling, so that no external force must be overcome for transfer. Power requirements are thereby reduced and contact release simplified. The result is greater sensitivity and reliability plus longer life.

Two Space Savibg form!

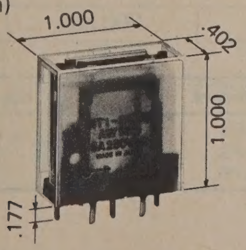
NEW

NT Relays

Vertical flat power relays

- High contact capacity up to 5A 250VAC
- Sensitive relay — 140mW (DC) low operating power
- Compact size-small mounting space for high density packaging
- Long life-Mechanical: more than 10^7 operations
  Electrical (5A 250VAC resistive): more than 2×10^5 operations
- International terminal pitch — .100 inch (2.54 mm)



Types and Data

K Relays

Uniquely designed highly sensitive relays

- Interchangeable with existing cradle relays
- 100 times more reliable through simplified design and bifurcated contacts
- Extra long life (mechanical) — more than 10^8 operations (electrical 1A 30W) — more than 10^7 operations
- Patented highly sensitive magnetic system
- Sealed Amber types available
- UL, CSA, VDE recognized.

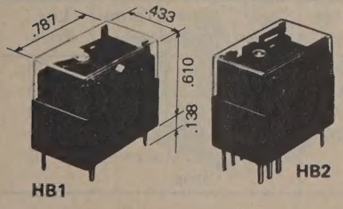
Note: Standard packing → Carton: 100 pcs./Case: 500 pcs.

HB Relays

Cost saving flux tight subminiature DIP relays

- Small size for increased packaging density
- Sensitive — very low operating power
- Soldering flux inflow prevented by molded construction
- Simple mechanism for stable quality — just 7 piece parts
- DIP — matching 16 pin IC socket
- Contact capacity — 1A 125VAC, 2A 30VDC



Types and Data

HC Relays

Highly qualified miniature relays for wider applications

- Interchangeable with comparable relays.
- Extra long life — more than 10^8 mechanical operations.
- 4 types of contact arrangement — 4C (5A 250VAC), 3C (7A 250VAC), 2C (7A 250VAC), 1C (10A 250VAC)
- UL, CSA, VDE recognized.

HL Relays

10 AMP space saving power relays

- High switching capacity in a compact size —
  SPDT (15A 125VAC),
  DPDT (10A 250VAC)
- High quality assured through advanced manufacturing techniques —
  Integral molding, Heat riveting and Spot welding
- Long life — Mechanical : more than 10^8 operations (DC), more than $5x10^7$ operations (AC)
  Electrical: more than $5x10^5$ operations
- UL recognized.

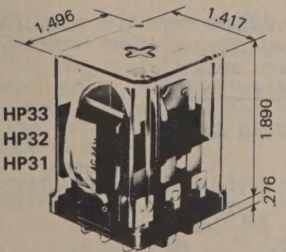
HP Relays

Highly reliable construction 10 AMP power relays

- Interchangeable with existing models
- Longer life insured by screwless assembly —
  Simplified and non-loosening molding blocks of contact spring holder and terminal base.
- High quality insured by mass production with excellent manufacturing technique
  Integral molding, Heat-riveting and Spot welding
- Versatile application of terminal for plug-in, soldering and Q.C. terminals.
- UL, CSA recognized.



HG Relays

Compact, large capacity relays for AC, DC application

- Up to 20A 250VAC resistive load, 1.5 KW 3 phase 220VAC motor load
- Available with plug-in, solder or QC terminals (Faston 250)
- UL, CSA recognized.

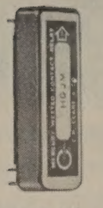
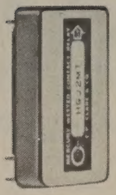
MERCURY-WETTED CONTACT RELAYS
HGJM HIGH SPEED MODULAR RELAYS

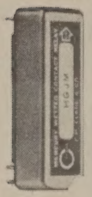


HGJM

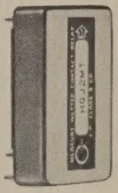


HGJ2MT

LOW PROFILE



HGJM



HGJ2MT

HIGH SENSITIVITY

HGJM

Clare HGJM relays have established new industry standards for quiet, fast and stable operation. HGJM Series SPDT relays have the 100VA load and multi-billion operation reliability characteristic of our HGSM and are recommended for all new applications.

Noise levels are less than 10μV at 5ms after coil energization (10kHz bandwidth). The relays are stable to 200Hz, with on and off times down to 2.5ms. The 1 Form C contact will switch μV, nanoampere loads to 2A or 500V loads (100VA max, ac or dc). The relays are offered in 0.400″ height high sensitivity models and 0.350″ height low profile versions. Both mount on staggered 0.100″ PCB grid patterns. The low profile models permit 0.5″ board centers.

HGJ2MT

Clare HGJ2MT relays feature the same outstanding electrical characteristics as the HGJM relays in a DPDT (2 Form C) package. High sensitivity HGJ2MT relays have common open time durations of 50μs at 100Hz for capacitor transfer technique applications. Electrostatic shielding is standard on all models.

MERCURY-WETTED CONTACT RELAYS

HGM, HG2M HEAVY DUTY MODULAR RELAYS

HGM

HGM relays are Clare standard HG switch capsules in module form. They have heavy duty contacts but are excellent for low level signals. The standard HG switch in the HGM is not polarity sensitive. Contacts are SPDT make-before-break rated at 5 amps, 500 Volts. 250VA maximum. Life expectancy is 20 x 10⁹ at specified ratings.

HG2M

HG2M has he same characteristics as the HGM but contains 2 capsules to give you double-pole, double-throw configuration make-before-break. This results in saving space and cost over single element units.

HGX SWITCH CAPSULE

HGX-1004

Mercury-wetted switch capsule is sealed in glass and pressurized with hydrogen. To make it safe and practical to use with permanent magnets, the switch is potted in an impregnated paper tube.

Five No. 22 gauge lead wires project 12″ from the tube. The wires are color coded to facilitate identification. Red, normally open; black, normally closed; yellow, armature contacts. An arrow on the decal shows the proper mounting position. The decal is located on the most sensitive side of the switch.

The HGX-1004 is capable of handling the same contact load (5 amps maximum, 500 volts maximum, 250VA) as the HG relay. Contact protection is required.

This device finds use as a limit switch, float switch, stepping switch, pulse generator, and time base, or in other applications where it may be actuated by a permanent magnet.

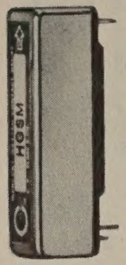
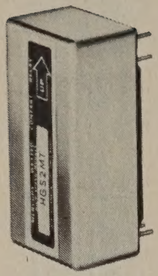
MERCURY-WETTED CONTACT RELAYS

HGSM, HGS2MT MODULAR RELAYS



HGSM



HGS2MT

HGSM

Clare HGSM relays are PCB mount models with 2A or 500V (100VA max.) switching capabilities. The HGSM series SPDT relay is recommended for replacement applications only. New applications should specify the faster HGJM series with the same load switching capabilities, life expectancy and lower noise. The HGSM package is .640 high and mounts on staggered 0.100″ grid patterns.

HGS2MT

Clare HGS2MT relays have the same ratings and life expectancy as the HGSM series in a DPDT model. The HGS2MT relay is also recommended for replacement purposes only. HGJ2MT relays are recommended for all new applications requiring 100VA (per pole) switching capabilities in DPDT configurations.

MERCURY-WETTED CONTACT RELAYS
HGRM/HGR2MT, HGSR MODULAR RELAYS

These time proven standard mercury-wetted contact relays have 100VA, 500V or 2A maximum load characteristics and multi-billion operation reliability are still available for replacement purposes. They are not recommended for new applications because of the limited speed (125Hz). The economical HGJM relays with the same 100VA load and life characteristics plus faster, quieter operation and the popular staggered 0.100″ grid mounting pattern are recommended for all new applications. The packages stand 0.400″ high. Note the differences in the pin spacing between the HGRM and HGSR relays.

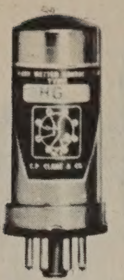
MERCURY-WETTED CONTACT RELAYS

HG, HG2A, HG3A, HG4A PLUG-IN RELAYS



HG

HG2A, HG3A

HG4A

HG SERIES

Clare HG, HG2A, HG3A and HG4A heavy duty mercury-wetted contact relays offer 1, 2, 3 or 4 Form D packages respectively in standard industrial plug-in styles. The entire series feature heavy duty 250VA, 500V or 5A per pole maximum ratings for rugged loads. The entire relay series is polarity insensitive. Plated steel covers provide excellent mechanical protection and electrical shielding.

ENGINEERING DATA

HG SERIES

CONTACT RATING: Power 250VA, max. voltage 500V, max. current 5A, max., (10A max. carry only) with proper contact protection

CONTACT CIRCUIT RESISTANCE: 20 to 50 milliohms, stable within ±2 milliohms over life

LIFE EXPECTANCY: 2 x 10^{10} operations (with proper contact protection)

TIMING: Depending on relay configuration and coil drive

Operate — 2 to 10ms

Release — 2 to 8ms

BREAKDOWN VOLTAGE: 1000Vac, rms, 60Hz between mutually insulated terminals

ENVIRONMENTAL:

Vibration (non-operating) — 10-500Hz, 0.06" d.a. or 10g's, whichever is less.

Shock (non-operating) — 30g's, 11 ±1ms ½ sinewave

Temperature (operating) — −38.8° to +85°C

MERCURY-WETTED CONTACT RELAYS

HGS, HGP OCTAL PLUG RELAYS

HGS

HGP

HGS

HGS Mercury wetted relay offer increased speed and reliability along with high sensitivity. HGS 1000 Series provide SPDT make-before-break and HGS 5000 Series provides SPDT break-before-make. Both are rated at 2 amps, 500 Volts, 100VA max. Standard design available only in single element assemblies, they come in the following, single-side-stable, bistable and chopper. Life expectancy is 20 x 10⁹ at specified ratings.

HGP

HGP is similar to the HG Series except for the inclusion of permanent magnets making a slight increase in height. Magnets provide increased sensitivity. Contacts are SPDT make-before-break rated at 5 amps, 500 Volts, 250VA maximum. Life expectancy is 20 x 10⁹ at specified rating.

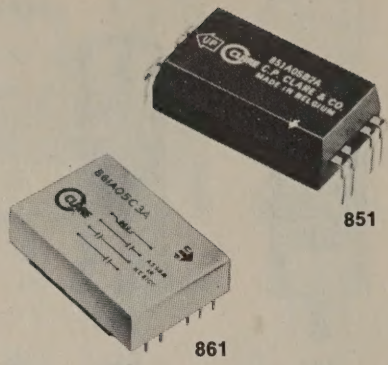
MERCURY-WETTED REED RELAYS

851 MOLDED AND 861 METAL COVERED RELAYS



851A05B2A
C P CLARE & CO.
MADE IN BELGIUM
861A05C3A
851
861

851 SERIES

Clare's 851 relay series represents new design dimensions and offers freedom in the solution of switching problems. They provide billion operation bounce-free mercury-wetted switching performance, load handling capability from signal-level to 50VA, multipole flexibility, epoxy molded construction, and a cost approaching dry reed relays. 851 series relays are designed for printed circuit board mounting.

861 SERIES

Clare 861 series Mercury-Wetted Microclareed relays are superior when compared to dry reed relays of the same size. The relay has a reliable reed capsule with a no-bounce mercury-wetted armature. You obtain some of the mercury-wetted contact relay advantages at a slight price premium over dry reed relays.

ENGINEERING DATA

851 AND 861 SERIES

CONTACT RATING (Resistive load with proper contact protection):
Power — 50VA max.
Voltage — 350Vdc or peak ac max.
Current — 1 ampere, max., switched
3 amperes, max., carry only

CONTACT RESISTANCE (ON Impedance): 50 milliohms maximum, ±2 milliohms throughout life

INSULATION RESISTANCE (OFF Impedance): 500 megohms over open contacts, 10,000 megohms between coil and contacts at 100Vdc, +25°C, 20-50% relative humidity

DRAIN TIME: 30 seconds after reaching upright vertical position plus at least one no-load operation to clear the contacts

BREAKDOWN VOLTAGE: 1000V, rms, 50/60Hz or 1400Vdc between all mutually insulated terminals

OPERATING TIME: 3 milliseconds, maximum (No bounce on closure)

RELEASE TIME: 3 milliseconds, maximum with nominal clamping

ENVIRONMENTAL:
Vibration — 10-500Hz, 0.06″ double amplitude or 10g's (non-operating)
Shock — 30g's, 11 ±1ms, ½ sinewave (non-operating)
Temperature — −38.8° to +65°C (operating)

LIFE EXPECTANCY (With proper contact protection): 20 x 10^6 operations at max. contact rating

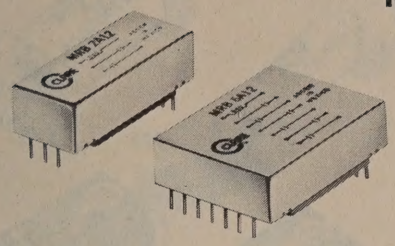
DRY REED RELAYS

MRB METAL COVERED MICROCLAREED® RELAYS



Clare's MRB Microreed relays offer versatile signal level to 10VA switching capabilities, total input/output isolation, 800 microsecond typical switching speeds in the miniature sized relay family.

The MRB relays operate with coil power requirements as low as 10 milliwatts. The ultra-reliable operation will exceed 100 x 10⁶ operations at signal level loads or 10 x 10⁶ operations at the rated load.

Optional MRB relays are available in 3 or 5 Form A, 2 Form B, 3 or 4 Form C. 1A latching or 2A latching and 2A2B contact forms. UL recognized versions in all but Form C are available as listed in UL File E43775. The relays have molded epoxy bases with stamped metal covers and convenient 1.000″ x 0.100″ grid mounting centers for printed circuit board mounting. This low profile package will mount on 0.5″ PCB centers. Electrostatic shielding is available. 1.000″ x 0.150″ grid mounting models are available in 1 to 5 Form A versions. Consult the factory for details.

Power — Form A/B 10VA max. Form C 3VA max.
Voltage — Form A/B 200 Vdc or peak ac, max. Form C 28 Vdc or peak ac, max.
Current — Form A/B 0.75 amperes, switched, max. Form C 0.25 amperes, switched, max. Form A/B 2.0 amperes, carry only, max. Form C 1.5 amperes, carry only, max.

CONTACT RESISTANCE: (ON Impedance): Initial: 200 milliohms max., measured at 10mA, 1000Hz

LIFE EXPECTANCY: 100 x 10⁶ operations at signal levels. 10 x 10⁶ operations at full rated load

TYPICAL OPERATE TIME: Less than 800μs including bounce

TYPICAL RELEASE TIME: As low as 90μs. Less than 500μs with nominal zener clamping. All release times dependent upon contact forms and coil drive.

BREAKDOWN VOLTAGE: 250Vac, rms, 60Hz across open contacts or 350Vdc max.

INSULATION RESISTANCE (OFF Impedance): 10^{10} ohms min. at 100Vdc +25°C, 40% rel. hum.

ENVIRONMENTAL (Operating): Vibration: 0.06″ d.a. or 10g's, 10-2000Hz. Shock: 20g's, 11 ±1ms, ½ sinewave. Temperature: −40°C to +85°C

DRY REED RELAYS

925 OPEN TYPE AND 951 MOLDED RELAYS

925 SERIES

Clare's new 925 series dry reed relays utilize an economical open type construction and the reliable Microclareed® miniature dry reed switch which gives up to 10 million operations at rated load. The relay frame is formed in a single molded piece for greater strength and rigidity. The relays are available in 1 Form A, 2 Form A and 1 Form B contact arrangements with 5/6, 12, or 24Vdc coils.

951 SERIES

The Clare 951 series dry reed relays offer signal level to 10VA switching capabilities, standard contact arrangements of 1, 2 and 4 Form A configurations, total input/output isolation, and rugged epoxy molded construction. Clare manufactured capsules and their demonstrated switching reliability provide 100 million operations at signal-level loads or 5 million operations at rated loads.

ENGINEERING DATA

925 SERIES

CONTACT RATING (Resistive load):
Power — 10VA, max.
Voltage — 200Vdc, max.
Current — 0.75 ampere, switched, max.
2.0 amperes, carry only, max.

CONTACT RESISTANCE (ON Impedance): 250 milliohms, max. initial total circuit, measured at 10mA, 1000Hz

LIFE EXPECTANCY: 100 x 10^6 operations at signal levels, 10 x 10^6 operations at full rated load

INSULATION RESISTANCE (OFF Impedance): 10^{10} ohms min. between all insulated points at 100Vdc, +25°C, 40% relative humidity

DIELECTRIC WITHSTANDING VOLTAGE: 250Vac, rms, 60Hz across open contacts or 350 Vdc max. 500 Vdc all other mutually insulated points.

TIMING (At nominal voltage):
Operate — Less than one millisecond including bounce
Release — Less than one millisecond with nominal voltage zener clamping

ENVIRONMENTAL (Operating): Temperature — −40° to +85°C

PHYSICAL:
Mounting — Any position
Contact — Rhodium over gold
Terminals — Solderable

951 SERIES

CONTACT RATING (Resistive load):
Power — 10VA, max.
Voltage — 150Vdc, or peak ac, max.
Current — 0.75 ampere, switched, max.
1.0 ampere, carry only, max.

CONTACT RESISTANCE (ON Impedance): 200 milliohms, max. initial

LIFE EXPECTANCY: 100 x 10^6 operations at signal levels, 5 x 10^6 operations at 750mA, 12Vdc, resistive, 5 x 10^5 operations at 360mA, 28Vdc, resistive

INSULATION RESISTANCE (OFF Impedance): 10,000 megohms between all insulated points at 100Vdc, +25°C, 20-50% relative humidity

CAPACITANCE: 0.6pF across open contacts, 1.4pF open contacts to coil, 2.5pF closed contacts to coil

DIELECTRIC WITHSTANDING VOLTAGE: 175Vac, rms, 50/60Hz or 250Vdc across open contacts, 1000Vac, 50/60Hz or 1400Vdc all other points

TIMING (At nominal voltage):

Form	Operate (typical)	Bounce (typical)	Release (with diode)
1A	175µs	120µs	250µs
2A	250µs	120µs	250µs
4A	350µs	120µs	250µs

ENVIRONMENTAL:
Vibration — 0.125″ d.a. or 20g's, 0-5000Hz (non-operating)
Shock — 100g, 11 ±1ms, ½ sinewave (non-operating)
Temperature — −40° to +105°C (operating)

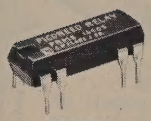
DRY REED RELAYS

PRME EPOXY MOLDED PICOREED® DIP RELAYS



PRME

Clare's new dual-in-line package PRME Picoreed relay represents a significant addition to the mincrominiature Picoreed relay family packaging. The relays feature 600 microsecond typical response times, signal level to 10VA switching capabilities, total input/output isolation, epoxy molded consruction and an IC compatible TO-116 DIP package. Traditional Clare reliability gives 100 x 10^6 operations at signal level loads or 5 x 10^6 operations at the rated load.

The PRME one Form A switching arrangement is compatible with most DTL/TTL drive IC's. The coil draws only 13 milliamperes from standard 5 volt logic supplies. Low contact noise and low thermal emf characteristics make the PRME ideal for electronic process control equipment and low level switching applications.

The 0.180″ height optimizes the industry trend toward high density packaging by allowing PRME mounting on 0.375″ PCB centers compatible with IC components. The PRME adapts to either automatic insertion equipment techniques for direct PCB mounting on 0.30″ x 0.100″ grid patterns or to mounting in standard 14 pin DIP sockets.

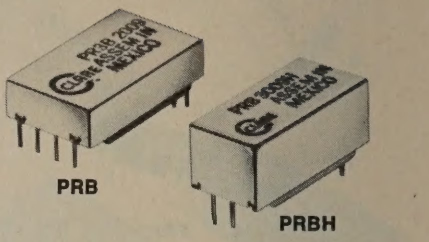
DRY REED RELAYS
PRB, PRBH METAL COVERED PICOREED® RELAYS



Clare's micro-miniature PRB and PRBH series Picoreed relays offer signal level to 10VA switching characteristics, power requirements ranging from 48 to 500 milliwatts (dependent on relay configuration) and operate times typically less than 500 microseconds in economical space saving packages. The low profile PRB series permits 0.375″ PCB mounting centers and the high sensitivity PRBH series will mount on 0.5″ PCB centers.

The 5 volt PRB/PRBH relays are fully compatible with the standard 5 volt DTL/TTL logic families and will solve many interface application problems. Both series have molded epoxy bases with stamped metal covers and mount on 0.70″ x 0.100″ grid patterns. The PRB low profile models are also available in 6 Form A, 1B and 1A1B contact configurations. Electrostatic shielding is available.

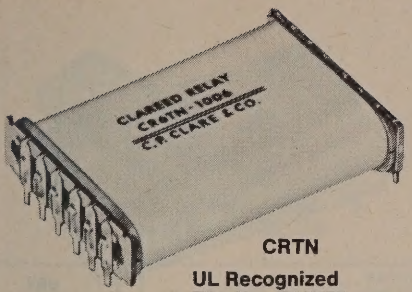
CRTN SERIES CLAREED® DRY REED RELAYS



CRTN

UL Recognized File No. E43775

Clare's economical CRTN standard size reed relays offer signal level to 15VA power handling capabilities, total input/output isolation, and low milisecond switching speeds. CRTN relays are direct replacements for our CRT series relays. Like all Clare reed relays, they are immune to false operation and are insensitive to overload transients that affect solid state devices. Clareed relays are rated for millions of reliable, trouble free operations. Optional CRTN series contact configurations are 3 & 5 Form A, 1B or 2B, 1C or 2C, and 1A latching or 2A latching. Special relays are available with up to twelve contacts. UL recognized versions of our 1 to 12 Form A relays are available as listed in UL File E43775. The relays feature open assembly construction and PCB 2.5″ x .218″ grid mounting centers.

NOTES:

1. Pin numbers are for reference only.

†2. The following lists of external series limiting resistors for each winding are recommended to limit coil current to the specified values.

Form	Voltage	Resistor	Form	Voltage	Resistor
1AL	12	410 ohms, ¼ W	2AL	12	220 ohms, ¼ W
(15mA)	24	1230 ohms, ¼ W (½ W cont. duty)	(28mA)	24	660 ohms, ½ W
	48	2870 ohms, ½ W (1W cont. duty)		48	1540 ohms, 1W (2W cont. duty)

For latching relays the Must Operate or Set Pulse must be 2 milliseconds minimum. The Must Release or Reset Pulse must be 5 milliseconds minimum to avoid false contact reclosure.

3. To order UL recognized (1 to 12 Form A) relays, replace the product designator TN with the letter U. Example: CR3TN1011 becomes CR3U1011.

4. Coil Indicators:
   Coil No. 1 — A red dot above the terminal center line indicates a positive terminal and a red dot below the terminal center line indicates a negative terminal.
   Coil No. 2 — A green dot above the terminal center line indicates a positive terminal and a green dot below the terminal center line indicates a negative terminal.

ENGINEERING DATA

CRTN

CONTACT RATING (Resistive load):
Power — 15VA, max.
Voltage — 250 volts dc or peak ac, max.
Current — 1 ampere, switched, max. 5 amperes, carry only, max.

CONTACT RESISTANCE (ON Impedance): Initial — 70 milliohms max., measured at 100mA, 1000Hz

LIFE EXPECTANCY: 100 x 10^6 operations at signal levels. 20 x 10^6 operations at full rated load

TYPICAL OPERATE TIME: Less than 4.0ms including bounce

BREAKDOWN VOLTAGE: 500Vac, rms, 60Hz across open contacts or 750Vdc, max.

INSULATION RESISTANCE (OFF Impedance): 10^{10} ohms min. at 100Vdc +25°C, 40% rel. hum.

ENVIRONMENTAL (Operating):
Vibration — 0.06″ d.a. or 10g's, 10-750Hz
Shock — 30g's, 11 ±1ms, ½ sinewave
Temperature — −65° to +85°C

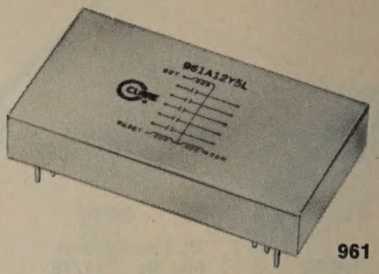
DRY REED RELAYS

961 MAGNETIC LATCHING RELAYS



961

Clare's 961 series Self-Latching Relays offer proven reed reliability plus bistable switching in one through six pole configurations. The heart of the relay is a new self-latching switch that provides the magnetic memory function without the external biasing magnets used in conventional latching relays.

The relays are designed to operate on the recommended one millisecond pulse at the specified nominal voltage. The pulse duration is limited only by coil heating and may be as long as one second. The 961 series relays are not subject to the over-drive limitations of conventional latching reed devices. Once pulsed into a set (closed) or reset (open) state, the relay will remain in that state until the opposite mode is selected.

ENGINEERING DATA

CONTACT FORMS: 1, 2, 3, 4, 5 or 6 poles, self-latching.

CONTACT RATING: 5VA, max., switched, 250Vac, max., switched, .5A, max., switched, 1.0A, max. carry

CONTACT RESISTANCE (Initial): 100 milli-ohms, max.

LIFE EXPECTANCY: 5 x 10^6 operations at 24Vdc, 200mA, switched 10^7 operations at 48Vdc, 100mA, carry only, 10^8 operations at signal levels

SET/RESET PULSE DURATION: 0.5 millisecond min., at nominal voltage, 1.0 millisecond pulse recommended

SET TIME: 1.5 millisecond max., including bounce

RESET TIME: 0.1 millisecond max.

DIELECTRIC WITHSTANDING VOLTAGE: 600 Vdc min. across contacts, 150Vdc max. between coils, 1000Vdc min. contacts to coil and all points to cover.

INSULATION RESISTANCE: 10^9 ohms min. at 100Vdc, +25°C, 40% relative humidity

ENVIRONMENTAL:
Vibration — 10g, 2 to 2000Hz
Shock — 50g, 11 ±1 milliseconds
Temperature — −10° to +85°C operating
−40° to +105°C storage

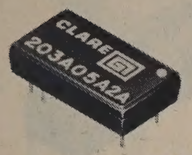
SOLID STATE RELAYS

203 ¾ AMPERE AC RELAYS



CLARE
203A05A2A

203 **UL Recognized File No. E61258**

Clare's ¾ ampere 203 Solid State AC Relay has a switching load of 240Vac at 0.35 power factor. It features zero crossing synchronous switching and opto-isolation that withstands 2000Vac. 7½ ampere peak one-cycle surge rating. The 203 relay will switch solenoid, motor starter, incandescent loads and telecommunication ringer frequency loads with ease and reliability. Compact DIP package has pin mounting for standard pc boards.

Part Number	Contact Form	Pickup Voltage (Vdc)	Dropout Voltage (Vdc)	Load..Voltage Range (Vac)
203A05A2A	SPST-N.O.	4.0	1.0	6.3-240

ENGINEERING DATA

INPUT: Nominal — +4.0 to 6.5Vdc

OUTPUT (Max. Ratings):

Repetitive Peak Offstate Voltage (Note 5) — ±400Vdc

RMS Load Voltage — 140/240Vac

RMS Output Current — 0.750A

Peak One-Cycle Surge Current — 7.50A

Peak One-Second Surge Current — 3.75A

STORAGE TEMPERATURE: −40° to +125°C

OPERATING TEMPERATURE: 0° to +85°C

INPUT:

Pickup Voltage (Must operate) — 4.0Vdc max.

Dropout Voltage (Must release) — 1.0Vdc min.

Input Current (V_{input} = +4.5Vdc) — 12.0mAdc max.

OUTPUT:

RMS Load Voltage — 6.3Vac min., 140/240 Vac max.

RMS Load Current — 10mAac min., 750mAac max.

Load Power Factor — 0.35 min., 1.0 max.

Load Frequency — 15Hz min., 63 Hz max.

Offstate Leakage Current (Load Voltage @ 240Vac) — 7mAac max.

Output Voltage Drop (I_{Load}) = ¾ A — 1.2V peak max.

Source Voltage (At 1st Turn On) — ±10Vac peak max.

Turn On Time (Zero Voltage Turn On) — ½ cycle max.

Turn Off Time (Zero Current Turn Off) — ½ cycle max.

ISOLATION (Input to output, input to case or output to case):

Dieletcric Withstanding Voltage — 2000Vac, rms, min.

Insulation Resistance — 10^{10} ohms

Capacitance (Input to Output) — 10pF

List Price $16.00

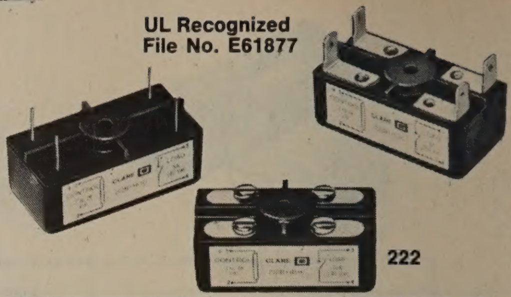
SOLID STATE RELAYS
222 MODULAR AC RELAYS

UL Recognized
File No. E61877



Clare's 222 series AC Solid State Relays have heavy duty switching capabilities with 5 or 10 ampere ratings at 140 or 250Vac. The optoisolator provides total input/output isolation and the sensitive input is fully compatible with DTL/TTL logic. The 222 series relays are ideally suited for computer peripheral, process control and inductive load applications. One cycle surge is 1000% of rated current. Choice of .032 pins, quick connect or screw terminals.

UL Recognized under File E61877.

SOLID STATE RELAYS
223 MODULAR DC RELAYS

Clare's SPST (N.O.) 223 Series DC Solid State Relays have fast 100 micro-second switching capabilities with 2 or 5 ampere ratings at 50Vdc. The optoisolator provides total input/output isolation and the sensitive input is fully compatible with DTL/TTL logic. The 223 series relays are ideally suited for motor and servo controllers in process control and machine tool applications.

Part No.	Contact Form	Input Voltage (Vdc)	Pickup Voltage (Vdc)	Dropout Voltage (Vdc)	Output Current (A)	Output Voltage (Vdc)	Terminal	Prices

UL Recognized
File No. E61258

Clare's 212 AC Solid State Relay has heavy duty switching capabilities with 10 or 25 ampere ratings at 140 or 250Vac. Control voltage of 3 to 28Vdc. One cycle surge current rating is 1000%. The opto-isolator provides total input/output isolation and the sensitive input is fully compatible with DTL/TTL logic. Zero crossing synchronous switching. The 212 relay is ideally suited for computer peripheral, process control and inductive load applications. Every relay features both quick-connect and screw-type terminals. UL recognized under File E61258, as Electronic Motor Controllers.

ENGINEERING DATA

INPUT at 25°C:
- Control Voltage — 3Vdc min., 28Vdc max.
- Pickup Voltage (Must operate) — 3.0Vdc max.
- Dropout Voltage (Must release) — 1.0 min.
- Input Current at 5Vdc Input — 4mAdc typ., 6mAdc max.
- Input Current at 28Vdc Input — 35mAdc typ.

OUTPUT at 25°C:
- RMS Load Voltage — 12Vac min., 140 or 250Vac max.
- RMS Load Current — .05A min., 10 or 25A max.
- Repetitive Peak Offstate Voltage (140V rating) — 200V peak max.
- Repetitive Peak Offstate Voltage (250V rating) — 400V peak max.
- Output transient immunity (dv/dt) — 100V/μs min. 200V/μs typ.
- Frequency Range — 50Hz min., 70Hz max.
- Offstate Leakage Current @ 140V (140V rating) — 8mAac max.
- Offstate Leakage Current @ 250V (250V rating) — 13mAac max.
- Load Voltage at Turn On — ±12V peak typ.
- Turn On Time at 60Hz — 8.3ms max.
- Turn Off Time at 60Hz — 16.6ms max.

ISOLATION (Input to Output, Input and Output to Case):
- Dielectric Withstanding Voltage (60Hz) — 1500Vac min.
- Insulation Resistance — 10^9 ohms min.
- Capacitance Input to Output only — 8pF typ., 10pF max.

TEMPERATURE RANGE (Operating and Storage): −40°C min., +80°C max.

PHYSICAL:
- Weight — 4 ounces
- Case Material — Self extinguishing Charcoal grey plastic
- Base Plate — Aluminum

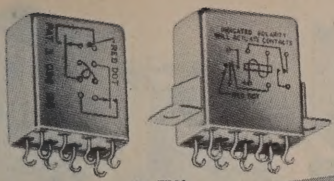
MINIATURE/INDUSTRIAL CRYSTAL CAN RELAYS

F, FW FULL SIZE AND HF, HFW HALF SIZE RELAYS



F, FW

C.P. CLARE & CO.
HF 1201 D00

HF, HFW

Clare provides full and half-size crystal can relays of unusual versatility, capable of reliable long life operation under adverse environments. The relays are available in both solder seal versions (F & HF) and welded seal models (FW & HFW). These relays are ideal for use in industrial application as well as military and aerospace. Relays employ a rigid frame to maintain permanent alignment of all elements. Contact arrangements are 2 form C. These relays are manufactured to meet Mil-R-5757 requirements.

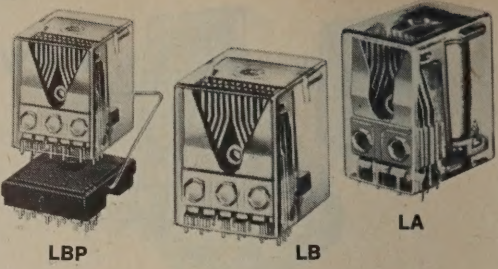
MODERN TELEPHONE RELAYS

LA, LB, LBP MINIATURE COVERED RELAYS

Designed for the user who must have high quality at a reasonable price. The LA relays have 4PDT contacts and the LB/LBP relays have 6PDT contacts. These miniature relays have extraordinary switching capacity and versatility for their size. Contacts rated 2 amps at 28Vdc. LA/LB Series is for direct P.C.B mounting; and the LBP Series is for direct plug into socket mounting. These relays are ideal components for industrial and telecommunications applications.



ENGINEERING DATA

LA/LB SERIES

CONTACT RATING (Resistive load): 2A at 28Vdc

CONTACT MATERIAL: Palladium alloy, with Gold alloy overlay on bifurcated make and break springs.

CONTACT RESISTANCE (ON Impedance): 100 milliohms max. initial

LIFE EXPECTANCY: 100,000 operations at rated load min. 100,000,000 operations mechanical life min.

OPERATE TIME: 10-25ms typical

RELEASE TIME: 5ms max.

BREAKDOWN VOLTAGE: 500Vac, rms, 60Hz between all mutually insulated points

INSULATION RESISTANCE (OFF Impedance): 500K megohms min. at 25°C, 50% rel. hum.

ENVIRONMENTAL (Operating, 10μs max. contact chatter):
Vibration — 5-55Hz, 10g's
Shock — 15g's, 11ms, ½ sinewave

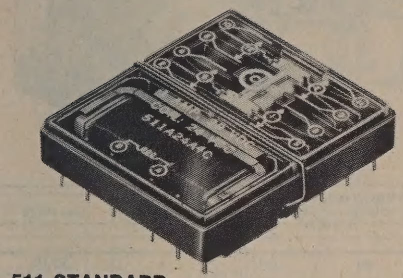
MODERN TELEPHONE RELAYS

511 LOW PROFILE RELAYS



511 STANDARD

Clare's new 511 series Modern Telephone relays offer reliable low level to 1 ampere switching capabilities in 2 and 4 Form C or D models. The low profile package is only 0.35" (8.9mm) high and allows PCB mounting on standard 0.5 inch (12.7mm) centers.

The 511 series enclosures feature an amber polycarbonate dust cover and a molded base of thermosetting electrical grade plastic material. This box type base with molded-in terminal pins fully protects the inside of the relay during wave soldering and subsequent partial immersion cleaning operations.

ENGINEERING DATA

CONTACT ARRANGEMENT: 2 or 4 Form C (Bifurcated) Standard. 2 or 4 Form D (Bifurcated) or Form C/D combinations are optional

CONTACT RATING (Resistive load at 25°C)

Current	Voltage	Life (Operations)
1.0A	28Vdc	5,000,000
1.0A	48Vdc	500,000
.1A	48Vdc	50,000,000
.5A	115Vac, 50/60Hz	750,000

COIL DATA (at 25°C):

Voltage — 6, 12, 24, 48Vdc

Power — 2.4 watts max. continuous, 1.3 watts nom., (typical), 0.8 watts pickup, (typical)

Temperature Rise — 34°C per watt

LIFE EXPECTANCY:

Electrical — See Contact ratings

Mechanical — 100 x 10^6 operations

OPERATE TIME: See chart

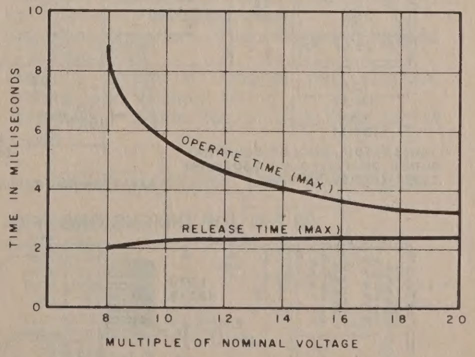
RELEASE TIME: See chart

BREAKDOWN VOLTAGE: 500Vac, rms, 50/60Hz min. between all mutually insulated elements

INSULATION RESISTANCE (OFF Impedance): 50,000 megohms min. at 500Vdc, +25°C, 50% relative humidity

ENVIRONMENTAL: Temperature range (operating) −45° to +65°C

OPERATE & RELEASE TIMES



CONTACT BOUNCE:

Normally open at operate — 3.0ms maximum

Normally closed at release — 10.0ms maximum

Notes:

1. Coils are not suppressed
2. Contact bounce not included in operate and release times

TELEPHONE TYPE RELAYS
J, JDP OPEN TYPE RELAYS

J & JDP relays are compact telephone type relays for applications ranging from simple switching in alarm circuits to complex computer functions. Contact combinations of 4, 6 & 8 pole double throw are rated 4A at 120Vac, 60Hz or 30Vdc resistive. Mechanical life exceeds 70 x 10^6 operations.

Type J relays are open type construction for direct chassis mounting. Series JDP relays are furnished with a socket with solder lug terminals and a dust cover enclosure.

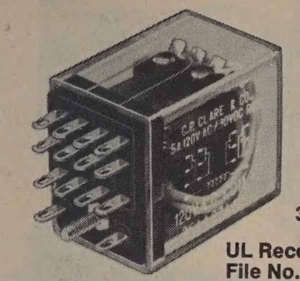
GENERAL PURPOSE RELAYS

354 MINIATURE 4-POLE RELAYS



354

UL Recognized File No. E47012

The 354 relay handles motor, lamp and solenoid switching requirements in everything from vending machines to disc drive applications. They also switch signal levels in intercoms, two-way radios and small telephone exchanges plus input multiplexing in control systems.

The options make it all possible. Contact ratings up to 5 amperes, ac or dc coils, plus solder lug/plug-in, taper tab or pcb terminals. The relays have UL recognition, File E47012, as Magnetic Motor Controllers for use in industrial applications.

ENGINEERING DATA

CONTACT RATINGS:

Contact Types	Ratings
Gold Flashed Silver Button	3A at 30Vdc or 120Vac resistive or 1/10 H.P. at 120Vac
Gold Flashed Silver Cadmium Oxide Button	5A at 30Vdc or 120Vac resistive or ⅛ H.P. at 120Vac

LIFE EXPECTANCY:
Electrical — 100,000 operations min. at rated load
Mechanical — 50 million operations

TYPICAL OPERATE TIME:
Operate — 20 milliseconds max., not including bounce
Release — 10 milliseconds max., dc not including bounce. 15 ms max. ac

BREAKDOWN VOLTAGE: 700 Vac, rms, 60Hz min. between open contacts, 1500Vac, rms, 60Hz between all other mutually insulated elements

INSULATION RESISTANCE (OFF Impedance): 1000 megohms min., at 500Vdc, +25°C, 50% relative humidity

CONTACT RESISTANCE (ON Impedance): 50 milliohms max. initially

U.L. RECOGNITION: File Number E47012 under Bulletins 508 "Industrial Control Equipment", 114 "Office Appliances and Business Equipment", 478 "Electronic Data Processing Units and Systems" and 751 "Vending and Amusement Machines"

ENVIRONMENTAL:
Vibration — 6g's 10 to 55Hz (operating test, no contact chatter, hard mounted, 10 microsecond detection level)
Shock — 20g's, 11 ±1ms, ½ sinewave (non-operating test, no mechanical damage)
Temperature Range — −45° to +50°C ac models: −45° to +65°C dc models

PHYSICAL:
Weight — Approx. 1.5 oz.
Enclosure — Polycarbonate
Insulating Material — High dielectric molded plastic resin
Marking — Nominal voltage, part number, schematic, contact rating
Terminals — Solder lug/plug-in, taper tab or pcb

GENERAL PURPOSE RELAYS

GP3 HEAVY DUTY RELAYS

The GP3 (Lexan® dust cover) Relays are UL recognized (UL File E47012) and CSA certified as Magnetic Motor Controllers. The rugged AC or DC relays are available in SPDT, DPDT and 3PDT configurations with Gold flashed Silver Cadmium Oxide contacts rated at 10 amperes at 28Vdc resistive or 120/150Vac, .8 power factor. The GP3 plain case models are available with matching molded nylon sockets for plug-in applications. The GP3 bracket case model is available for direct chassis mounting only. Mechanical life expectancy is 10 million operations, electrical life 100,000 operations minimum at rated load .187″ quick connect terminals are standard.

ENGINEERING DATA

GP3

CONTACT RATING: 10 amperes at 28Vdc resistive or 120/150Vac, .8 power factor. 6 amperes at 240/300Vac, .8 power factor. ⅓ hp at 120Vac, ½ hp at 240Vac

CONTACT RESISTANCE: Initial — 50 milliohms max. at rated current

LIFE EXPECTANCY:
Electrical — 100,000 operations minimum at rated load
Mechanical — 10,000,000 operations

OPERATE TIME: 15ms typical

RELEASE TIME: 11ms typical

BREAKDOWN VOLTAGE: 600Vac, rms, 60Hz minimum between open contacts. 1600Vac, rms, 60Hz all other mutually insulated elements

INSULATION RESISTANCE: 1000 megohms minimum at 500Vdc

ENVIRONMENTAL:
Vibration — 0.1″ d.a. or 10g, 10 to 55Hz (operating)
Shock — 15g for 11 ±1ms (non-operating)
Temperature Range — −45° to +45°C (AC) 3 pole. −45° to +70°C (DC). −45° to +55°C (AC) 2 pole

OPTIONS:
BRACKET CASE — To order, change 8th character from "A" to "N". Example — GP3R231AA2000 becomes GP3R231NA2000. No charge.

NOTE: Options include neon indicator lamp, external push-to-test button, various mounting modifications and .205″ quick-connect or pcb terminals. Contact your local Clare Sales Office for details.

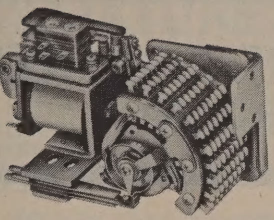
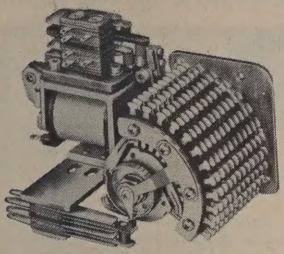
STEPPING SWITCHES

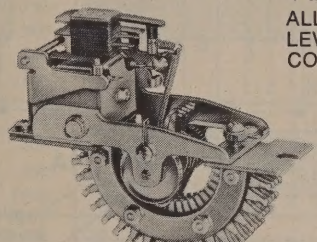
210, 211, 20, 26 SEQUENTIAL SWITCHING



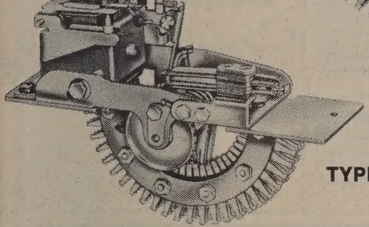
TYPE 210



TYPE 211



TYPE 20



TYPE 26

Clare stepping switches offer an economical alternative to solid state switching. Multiplexing, counting and sequencing problems are easily solved by providing the most working capacity in the smallest space. Clare stepping switches allow you to select, interrupt or change connections in a succession of circuits in response to current pulses.

Type 210 offers 3, 6 and 12 levels of 10 points with a life expectancy of 100 million steps at 12 levels. Contacts are rated 0.1A at 115Vac or 30Vdc resistive with a 3A carry rating. Operate time is approx. 20ms at 25°C and release time is 10ms. Solder lug terminals are standard.

Type 211 has the same electrical characteristics as the type 210 but in 3, 6, and 12 levels of 11 points.

Type 20 offers 4 and 8 levels of 20 points with a life expectancy of 180 million steps at 8 levels. Contacts are rated 0.1A at 115Vac or 30Vdc resistive with a 3A carry rating. Operate time is approx. 20ms at 25°C and release time is approx. 10ms at 25°C. Solder lug terminals are standard.

Type 26 has the same electrical characteristics as the type 20 but is offered in 4 and 8 levels of 26 points or 6 levels of 52 points.

ALL SWITCHES LISTED HAVE 1 BRIDGING LEVEL WITH THE REMAINING LEVELS BEING NON-BRIDGING. 2C OFF-NORMAL AND 2C INTERRUPTER CONTACTS ARE STANDARD.

ENGINEERING DATA

CONTACT RATINGS (Resistive load): 0.1A at 115Vac or 30Vdc switched, 3A carry only, max.

CONTACT RESISTANCE (ON Impedance): 0.15 ohm typical

LIFE EXPECTANCY: (See description)

TYPICAL OPERATE TIME: Approximately 20ms at 25°C, release time approx. 10ms

BREAKDOWN VOLTAGE: 1000Vac, 60Hz across open contacts

INSULATION RESISTANCE (OFF Impedance): 10^{11} ohms at 500Vdc between levels

ENVIRONMENTAL:

Vibration — 0.06″ d.a., 10-55Hz

Shock — 30g's, 11 ±1ms

Temperature — 0°C to +85°C

MICRO-MINIATURE REED RELAYS
Series CR-2200

Coto's micro-miniature CR-2200 series reed relays offer the same versatility, dependability and switching capabilities as the larger "miniature" relays . . . yet in a package ⅓ smaller than a "DIP". A wide variety of contact types are available to meet most micro-miniature switching needs. Coto utilizes premium grade reed switches exclusively. The relays are encapsulated and thoroughly tested by the most modern and sophisticated techniques. Again, the finest quality . . . from Coto.

- Relay occupies only .17 sq. in. of PC Board space . . . smaller than a DIP!
- Wide variety of contact types to meet most switching applications
- A choice of coil resistances at each voltage
- All relays are epoxy encapsulated in a magnetically shielded can, which has been coated with a bright, chemically resistant and insulating epoxy.
- Electrostatic shielding available
- Less than 500 microsecond switching speed typical on most models

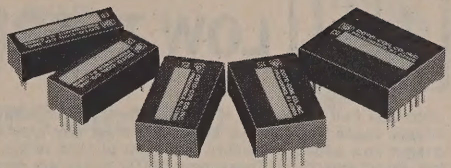
MINIATURE REED RELAYS
Series CR-2000 • • 1″ x .100″ Grid



DESCRIPTION Coto-Coil's Series CR-2000 is a new family of relays which have a pin termination on the popular 1″ x .100″ grid pattern. They are economical and available with a large variety of options (see reverse side).

The CR-2000 can be completely epoxy-encapsulated in a phenolic shell for maximum environmental protection and high insulation resistance. They are also available in a covered but non-encapsulated form for maximum economy.

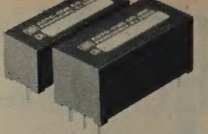
LOW THERMAL EMF REED RELAYS

Series CR-3200



Coto-Coil has developed a unique new method* that virtually eliminates offsets caused by thermal emf's in almost any type of reed switch. This design now allows the entire spectrum of reed relays to be used for very low signal switching. These new COTO relays are especially designed for scanning low-level analog and digital signals, multiplexing, data acquisition, and automatic testing of components and systems. They offer all the advantages of an encapsulated reed relay, such as high isolation, speed and long lifetime under practically any environmental conditions, in addition to a very low and stable offset.

*Patented

COTO's new line of low-offset relays is offered with a large variety of contact combinations, switch types and thermal offset ratings, in order to meet each customer's requirement with maximum performance at a minimum cost. The relays are encapsulated in an epoxy-filled shell, and the offsets that are present are remarkably independent of ambient temperature and external environment.

RELAYS	MODEL NO	COIL (Nominal)			CONTACT FORMS	THERMAL EMF RATINGS*	PIN CONFIG.	PKG.

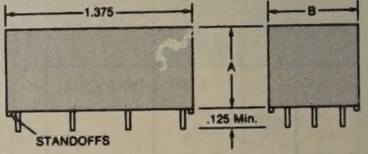
*Thermal Offset Ratings Per Switch:

4 <200nV	8 <3μV
5 <500nV	9 <5μV
7 <1μV	0 <100μV

Thermal offset measurements are made across each switch, except in Relays 3202, 3205, 3250, 3222 and 3232 where measurements are made differentially between the two low-thermal switches.

NOTES:
1) All relays are magnetically shielded.
2) Unless otherwise specified, all relays are electrostatically shielded.
3) Isolation resistance of 10^{10} or 10^{12} ohms is available.



Package I: 1.375 x .500(A) x .500(B)

Package II: 1.375 x .600(A) x .650(B)

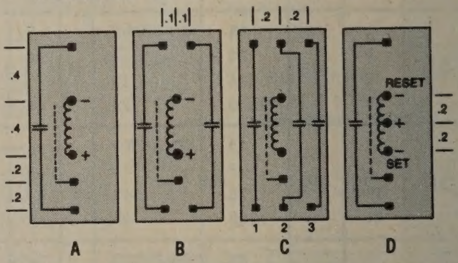
Shield and switch pins are .025" square, tinned copper.

Coil pins are .036" dia., nickel copper.

Pin pattern is centered within the case by ±.010".

Relays are encapsulated in a phenolic case, epoxy-filled.

PACKAGE and PIN CONFIGURATION (Bottom View)



Relays 3204, 3205, 3206, 3223 and 3233 contain a bias magnet, and coil polarity shown above must be observed.

Mercury-wetted Relays 3231, 3232 and 3233 must be mounted vertically with the arrow pointing up and shield pin at the bottom.

Switches 2 and 3 in Diagram C are the low-thermal switches in Relay 3250.

CONTACTS	DRY	HIGH VOLTAGE	MERCURY WET
Max. Power (Volt-Amps)	10	10	28
Max. Voltage (DC or Peak AC)	200	1000	100
Max. Current (Amps)	.500	.500*	1.0
Initial Contact Resis. (Ohms)	.300	.300	.300
Min. Breakdown Voltage (DC or Peak AC)	300	1000	800
Isolation Resis. (Ohms)	10^{10}	10^{10}	10^{10}
Operate Time (Typ. —msec)	1.5	1.5	2.0
Release Time (Typ. —msec)	.2	.2	.5
Average Life at Full Rating (# operations)	50x10^6	50x10^6	100x10^6

*0.010 Amperes max. @ 1000 VDC

INSULATION RESISTANCE
10^{10} ohms minimum at 100VDC, +25°C, 50% relative humidity between all isolated pins. 10^{12} ohms is also available.

CAPACITANCE
The contact-to-contact capacitance for low thermal contacts is approximately 2.0pf. This value is composed of 0.2pf from the reed contacts and 1.8pf from the low thermal offset circuitry. With the electrostatic shield the contact-to-coil capacitance is typically 2.0pf.

MUST OPERATE and RELEASE VOLTAGES
Must-operate voltages at 25°C:
5v relay — 3.8; 6v relay — 4.5; 12v relay — 9.0
Must-release voltages at 25°C:
5v relay — 0.4; 6v relay — 0.5; 12v relay — 1.0

INITIAL CONTACT RESISTANCE
The maximum initial contact resistance for each contact is 0.3 ohms. Typically the initial contact resistance measures to be 0.250 ohms and is composed of 0.070 ohms from the reed contacts and 0.180 ohms from the low thermal offset circuitry.

TESTING and RELIABILITY
The low thermal emf reed relays are most commonly used under essentially dry circuit conditions. For these low-level loads the life of a clean contamination-free switch can exceed 500 million operations. In order to assure the highest possible reliability each switch and completed relay is subjected to an extensive series of cycling and dynamic testing. In addition each isolated pin is checked against every other pin for insulation resistance at the rated breakdown voltage. Finally a thermal offset test at the rated voltage is performed.

THERMAL TESTING. Care must be exercised in setting up in-house testing procedures for measuring thermal offsets of the CR-3200 relays. Without properly designed test circuitry and instrumentation, far greater thermal EMF offsets can be generated external to the relay than internally. Coto's engineering department will be pleased to assist in recommending testing circuitry and components for Q/C testing.

EFFECT OF AMBIENT TEMPERATURES. One of the specific design features of the CR-3200 low thermal relay is its exceptional stability with ambient temperature changes. For the purpose of rating, all standard CR-3200 relays are tested at a nominal 25°C ambient. However, temperature excursions from 0°C to 50°C will result in no more than a 500 nanovolt offset change in a 1μV rated relay.

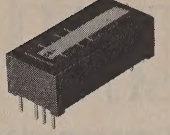
LOW THERMAL EMF REED RELAYS FOR LOW-LEVEL DATA ACQUISITION SYSTEMS



SERIES CR-3300

After many years as the leading supplier of ultra-low thermal EMF relays for low-level data acquisition systems, Coto has now developed a new generation of low thermal EMF reed relays. The CR-3300 series relays utilize a new simpler design that reduces the cost, while increasing the performance and reliability of the relays.

The CR-3300 relays are designed especially as input devices for data acquisition systems. These systems, along with process controllers and monitors, datascanners, multiplexers and digital and analog multipoint recorders, often require as many as 1000 input relays in one system which must switch signals to 1 microvolt resolution in an industrial environment. These applications require ultra-high reliability, low and stable thermal offset voltage, superior packaging and high control/signal circuit isolation. The CR-3300 relays are designed to meet these requirements and more, at a reasonable cost.

CONTACT FORM	Model Number	Nominal Coil VDC	Coil Res. Ohms ±10%	Must Operate VDC	Must Release VDC	Pin. Dia. Bottom View
2A	CR-3302-5	5	350	3.8	0.4		CR-3302-12	12	2000	9.0	1.0	
3A	CR-3350-5	5	350	3.8	0.4		CR-3350-12	12	2000	9.0	1.0	
3A	CR-3360-5	5	350	3.8	0.4		CR-3360-12	12	2000	9.0	1.0	

Pin 9 is the electrostatic shield pin.
NOTE: For Model CR-3360 the 3rd non-low thermal switch (9-10) is connected in common with the electrostatic shield at Pin 9.

Switches connected to pins 5-6 and 7-8 are the low thermal EMF switches.

PACKAGING

Relays are epoxy encapsulated in a flame-retardant polyester case (SE-O rated). The reed switches are coated with a silicone rubber to provide a stress-free encapsulation.
Tinned electrolytic copper pins minimize thermal EMF junctions at the PC Board connections.
The coil and coil terminations are well isolated from the switches and shield which provide a minimum of 1500 VRMS isolation between control and signal circuits.
All relays are magnetically shielded.
Unused terminals are omitted.

PARAMETER		TEST CONDITIONS	VALUE
Max. Switch Voltage		DC/Peak AC	200 Volts
Max. Switch Current		DC/Peak AC Resistive	500 mA
Max. Carry Current			2.0 Amps
Max. Contact Rating		DC Resistive	10 Watts
Life Expectancy		At Signal Level	100 x 10^6 Cyc.
		At Rated Load	10 x 10^6 Cyc.
Static Contact Resistance (Initial)		0.050 Volt, 10 mA Contact Load	0.100 Ohms Max.
Dynamic Contact Resistance (Initial)		0.5 Volt, 50 mA Load 100 hz, 1.5 msec after coil energized	0.200 Ohms Max.
Insulation Resistance		Between all isolated pins @ 100 V, 25 deg. C, 40% relative humidity.	10^{10} ohms min. (10^{12} ohms avail.)
Open Contact Capacitance		Shield Floating	1.0 pf Typ.
		Shield as Guard	0.4 pf Typ.
Contact to Shield Capacitance		Contacts Open	1.5 pf Typ.
		Shield & Coil shorted together	1.5 pf Typ.
Dielectric Strength (Minimum)	Between Contacts	DC/Peak AC Static Conditions	250 Volts
	Contacts to Shield		500 Volts
	Contacts and Shield to Coil	AC VRMS	1500 Volts
Operating Time (Including Bounce)		At Nominal Voltage 30 hz Sq. wave	1.0 msec Typ.
Release Time		Zener Diode Clamp Coil Suppression	100 μsec Typ.

THERMAL EMF

RATINGS. The thermal EMF is specified differentially between the two low thermal EMF switches (pins 5-6 and 7-8). This measurement is made by shorting pins 5 and 7 with a copper shunt and connecting a microvolt meter across pins 6 and 8. The CR-3300 relays are available with maximum differential thermal EMF ratings of either 10 μV, 5 μV, 3 μV or 1 μV. The ratings are determined by 100% testing and sorting according to the thermal EMF's measured after the coil has been energized for 15 minutes at its nominal voltage.

EFFECT OF AMBIENT TEMPERATURE. CR-3300 relays are exceptionally stable with ambient temperature changes. For the purpose of rating, the thermal EMF is measured at a nominal 25 degrees C ambient. Slow temperature excursions from 0 degrees C to 50 degrees C should result in no more than a 1 μV thermal EMF variation. External heat sources which create thermal gradients in the relay may cause larger variations and should be avoided.

COIL POWER AND DUTY CYCLE. The thermal EMF of the CR-3300 relays is directly proportional to coil power or the square of the applied voltage. When the relays are operated in a scanning mode the thermal EMF will be proportional to the coil duty cycle. Thus a 5 μV relay operated at a 10% duty cycle will normally exhibit less than a 1 μV offset.

TESTING. Care must be exercised in testing the thermal EMF of the CR-3300 relays. Large errors in the thermal EMF readings may be introduced by an improperly designed test set up. The connections to the copper switch pins should be made with 4 identical low mass connectors and lead wires. Care should be taken to avoid all external thermal gradients. Pure copper wire and connections should be used throughout. Coto's engineering department will be pleased to assist in recommending thermal EMF test procedures.

ENVIRONMENTAL RATINGS

Storage Temperature: —50 to +100°C
Operating Temperature: —20 to +70°C
NOTE: (The must operate and must release voltages and the coil resistance are specified at 25 degrees C. These values vary by approximately 0.4%/degrees C as the ambient temperature varies).
Vibration: 20 g's to 2000 hz
Shock: 50 g's

TESTING AND RELIABILITY

All relays utilize premium quality, contamination free reed switches with rhodium contacts. In order to assure the highest possible reliability each switch and completed relay is subjected to an extensive series of cycling and dynamic testing. In addition each isolated pin is checked against every other pin for insulation resistance at the rated breakdown voltage. Finally a thermal EMF test at the rated voltage is performed.

High Quality Low-Cost REED RELAYS Series CR-4000 CR-4200

These new uniquely-designed reed relays are manufactured and tested by the most advanced production techniques, which result in minimum customer costs, and a high standard of quality and performance.

- Only premium grade catalogued reed switches used throughout
- 100% testing of switches, coils and completed relays
- Relays are completely encased in a tough flame-retardant shell.

1A Latch Single Coil	CR-4245-5, 6, 12, 24	.200	10	200	.5	300

1. Available with 1000 ohm coil only.
2. External series limiting resistance recommended:
   5 or 6V — None 12V — 1000 ohms 24V — 3000 ohms
3. Coil polarity must be reversed to set and reset latch.
4. External coil suppression recommended for proper latch operation.

Specifications subject to change without notice.

The above listing of magnetic reed switches does not constitute a complete listing of all switches commercially available to fit Coto Coil reed relay coils. It does indicate the most common types and sizes manufactured by various companies. Coto's sales department will be pleased to assist you in recommending a source for your switch requirements or supplying the complete relay for your application.

DELTROL CONTROLS RELAYS

100U/101U SERIES

Small general purpose relay for light power load applications, such as other relays, solenoids and small motors. Continuous duty operation. 5 amp contacts: 1/8" dia. 10 amp contacts: 3/16" dia. Contact material: Gold-flashed fine silver and silver-cadmium oxide is standard. Mounting: No. 6-32 stud and locating tab. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066). CSA listed (File No. 20690).

B-4 DUST COVER

Sealed knock-out holes for standard conduit fittings. Relay mounts on pre-drilled base. Constructed of Aluminum. Snap action cover release. Accommodates following relay series 100, 100D/100F, 100RF, 100T, 100U/101U, 110, 120 and 130.

(S/N 20256-80) List $2.65

L = 4

105 SERIES

General purpose plug-in relay for continuous duty operation. Eight and 11-pin plugs for up to 3PDT configuration. Contact material: Gold-flashed fine silver and silver-cadmium oxide is standard. Add $ .40 to list for 105G neoprene gasket version. Plastic Cover. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066).

270 SERIES

Miniature solid state relay designed to switch low to medium current AC loads from low level logic signals. Current loads from 50 mA to 7 amps. Operates from AC or DC (opto-isolator LED for DC inputs; incandescent for low voltage AC inputs; neon for 120 VAC input). Continuous Current: 1.5 Amps RMS @ 25° C. with integral heat sink; 7 amps RMS at 25° C. with Std. TO-3 style heat sinks.

900 SERIES

Heavy duty power relay for industrial control applications. Particularly suited for motor controls, heater loads, welder loads, and other power switching applications. Molded nylon coil resists fungus and moisture, has a cleaner appearance. Long life, rugged construction. Rating: 25 amps, 1-½ hp, 120/240 VAC. Contacts: 5/16" dia. silver cadmium oxide, gold-flashed. Heavy duty screw-type terminals. Mounting: two 3/16" holes on 1-7/8" centers. Recognized under the Components Program of Underwriters Laboratories, Inc. (File No. E37066). CSA listed (File No. 20690).

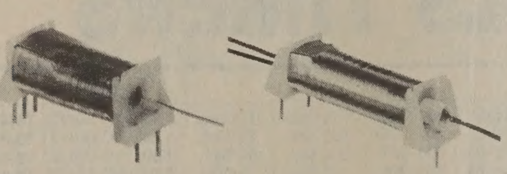
SPECIAL DESIGNS

HIGH INSULATION RESISTANCE RELAYS

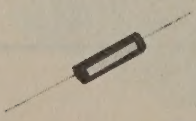


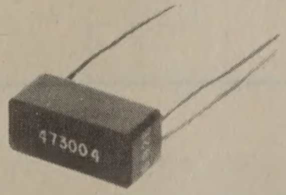
Two typical designs are shown above:

A — A miniature reed relay with a floating lead to maintain high IR.

B — This is a relay using Form A and Form B switches timed to provide a Form C (break before make) function with flying leads to maintain 10^{13} ohms. Up to 5 Form A contacts are available @ 10^{13} ohms.

PROXIMITY SWITCHES
FORM B

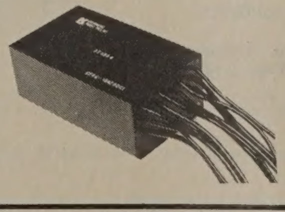




This is a Form B switch and magnet assembly, .7″ L x .150″ Sq. The normally closed switch opens, when approached by an ⅛″ Sq. steel rod.

Epoxy molded switch and magnet assemblies are available in many sizes, contact ratings and terminal arrangements.

SPECIAL HIGH VOLTAGE RELAY

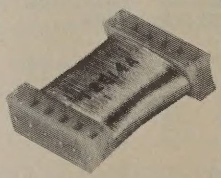


This relay has three separate coils, each containing a 5,000VDC and a 10,000VDC switch. The package is molded with a flame retardant epoxy and constructed to withstand 15,000VDC between the switches and all other conductors. The relay is 3⅞″ L x 2⅜″ W x 1½″ H.

Douglas Randall makes custom designed relays to solve difficult problems. A few models are shown below to illustrate the variety of variations available. Special molding techniques make it possible to manufacture unusual sizes, shapes and terminal arrangements with low tooling costs.

The electrical variations possible with Reed Relays are practically limitless.
Douglas Randall will gladly review your applications and offer rapid engineering and prototype service.

SNAP-IN RELAYS



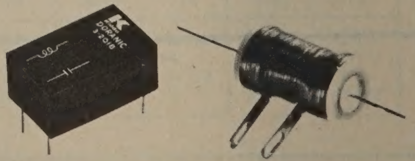
This 4 pole relay mounts in Berg-clips, like the Series SI on page 3466. Douglas Randall can now duplicate the following discontinued IBM models:

1 — Position: 766040, 766042, 766059, 766060, 766065, 766068 and 766086

2 — Position: 766043, 766044, 766057, 766067, 766072 and 766087

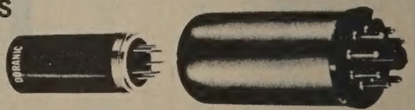
4 — Position: 766046, 766047, 766066, 766071 and 766079

HIGH SENSITIVITY RELAYS



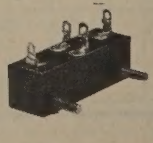
The relays shown will operate at 10 MW coil power.

PLUG-IN RELAYS



Reed relays are easily adapted to standard style headers for socket mounting.

SPECIAL TERMINALS AND MOUNTING SCREWS



The relay shown has terminals to accept #16 lead wire and mounting screws. Entire package is epoxy encapsulated for mechanical strength.

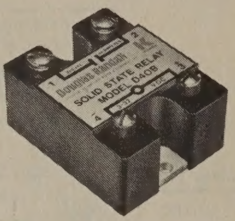
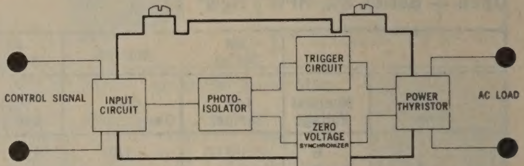
SOLID STATE RELAYS RATINGS TO 40 AMPS

AC OUTPUT / DC OR AC CONTROL UL RECOGNIZED / FILE NO. E60556 / C.C. NMFT2





Douglas Randall's line of solid state AC output relays are UL recognized (File E60556 / C.C. NMFT2). Featuring opto-isolation and zero-voltage switching models are available to handle up to 40 Amp. DC or AC control signals can be specified and Form A or B output contact.

INPUT SIGNAL DATA (AC OR DC)

	DC	AC
Range	3-32V[5]	90-240VAC (80-140VDC)
Must Operate	3VDC	90VDC (80VDC)
Must Release	1VDC	10VAC (10VDC)
Input Impedance	1000Ω Min., 40KΩ Min.	
Isolation		
Signal to Load	1500V, $10^{10}\Omega$ DC	
Signal to Base	1500V, $10^{10}\Omega$ DC	
Capacitance	15 pF Signal to Load	
Temperature Range	−30°C to +80°C	

MODEL NUMBERS (NOTE 4)

Output Rating		DC Signal	AC Signal
90-140VAC	4A	D04A	A04A
	8A	D08A	A08A
	12A	D12A	A12A

OUTPUT DATA (AC OUTPUT)

Maximum Current	4A	8A	12A	25A	40A
One Cycle Surge Current	50A	75A	100A	250A	400A
Overload (1 sec., RMS)	25A	35A	40A	40A	75A
Minimum Current	10mA Typ. 20mA Max.	10mA Typ. 20mA Max.	10mA Typ. 20mA Max.	10mA Typ. 25mA Max.	10mA Typ. 25mA Max.

AC Line Voltage: 90/140V or 200/280V[1] @ 47-63 Hz[2]
Voltage Drop @ Rated Current: 1.6V Max.
Typical Turn-on Voltage: 5V
Response Time (DC Signal): ½ Cycle Max.
dv/dt[6] Off State: 5V/μsec
Commutating: 100V/μsec

Off State Leakage Current:
90/140VAC — 4.5mA Typ.
200/280VAC — 5.5mA Typ.
Isolation Output to Base: 1500V, $10^{10}\Omega$ DC[3]
Contact Form: SPST (NO)[4]

NOTES AND OPTIONS

1. Special wide range models can be made which will switch loads from 18V to 140V. These relays can handle either 24VAC or 120VAC loads.
2. Special models are available which switch loads at 400 Hz.
3. 2500VAC isolation can be supplied on request.
4. Form A (SPST-NO) relays are standard. Form B (SPST-NC) switching is optional. Models incorporating this feature are designated by NC. e.g. A40B-NC.
5. All DC models are TTL compatible over the full operating temperature range.
6. All relays incorporate an RC snubber network which prevents false operation from transients up to the dv/dt level shown. More severe transients may require additional external protection. We will review your application and recommend the additional protection needed.

MECHANICAL SPECIFICATIONS

Size: 2¼"L x 1¾"W x 1⅛" maximum.

Weight: 4 ounces maximum.

Termination: Standard Models — Control Signal: 6-32 screws. Output: 8-32 screws.
Standard Models are furnished with ¼" Quick Connect adapters.
Special Models can be provided with lead wires or other types of termination in OEM quantities. Consult the factory for details.

SPECIAL DESIGNS

Douglas Randall has designed many special solid state relays, such as a polarized, latching, SPDT unit which will switch 12A at 28VDC. We also have the capability of making special package sizes and terminal arrangements for our solid state relays at moderate tool cost. Your inquiries will be reviewed promptly.

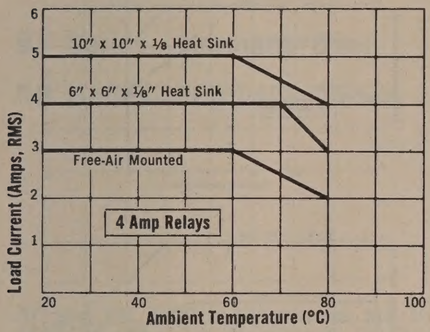
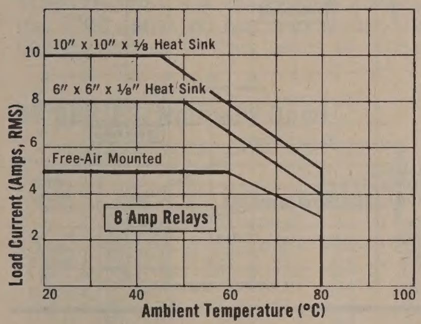
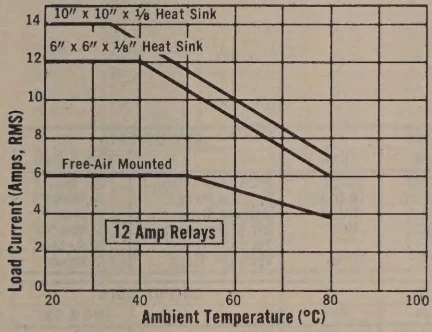
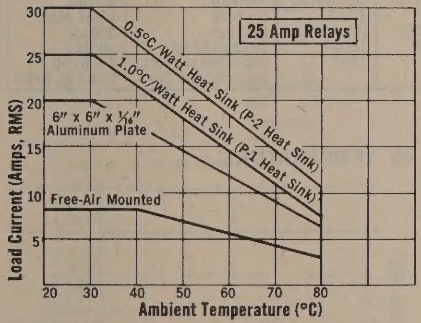
AC OUTPUT (Cont'd)

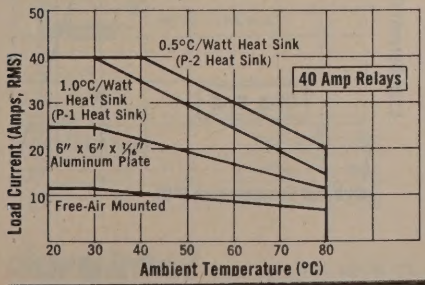
LOAD CURRENT VS TEMPERATURE











PROPORTIONAL CONTROLS

AC OUTPUT / RESISTOR CONTROL*

Douglas Randall Proportional Control Modules provide a variable AC output voltage to loads up to 15 Amps. They are solid state, full wave SCR phase angle control units, which offer a reliable, compact method of controlling motors, heaters, incandescent lamps, and other AC devices. Standard models vary the output from 0% to 90%.

INPUT*

Variable Resistor (150,000Ω, 1 watt) — For 120VAC
Variable Resistor (1 Megohm, 1/2 watt) — For 240VAC

MODEL NUMBERS

Output Voltage	90-130VAC			200-240VAC		
Model Number	R05A	R10A	R15A	R05B	R10B	R15B
Current	5A	10A	15A	5A	10A	15A

OUTPUT DATA

Maximum Current	5A	10A	15A
One Cycle Surge Current	50A	75A	100A
Overload (1 sec., RMS)	25A	45A	65A
Minimum Current	.040A	.040A	.040A
AC Line Voltage	90/130V or 200/240V @ 47-63Hz		

OPTIONS

Preset Minimum/Maximum:
Set internally at the factory to any value in the control range.

Preset Output:
Not variable — fixed output is preset internally to any value in the control range.

*Special designs can be driven by DC signals.

Special Ranges, Control Potentiometers and 400 Hz Load Controls are available as special designs.

Mechanical Arrangement:
See AC output relays opposite page.

SOLID STATE RELAYS SERIES K

DC OUTPUT / DC CONTROL SIGNAL

Douglas Randall Series K are SPST (NO) relays which will switch loads of 4, 8 or 12 Amps @ 2-32VDC or 2-55VDC. They provide rapid switching and opto-isolation between input and output. The sensitive inputs are compatible with DTL or TTL logic. Arc free switching makes these relays suitable for hazardous atmospheres.

MODEL NUMBERS

Output Voltage*	Current	Model
2-32VDC	4 Amp	K04A
	8 Amp	K08A
	12 Amp	K12A
2-55VDC	4 Amp	K04B
	8 Amp	K08B
	12 Amp	K12B

*Inductive loads must be diode suppressed.

INPUT SIGNAL DATA

Range	3-32VDC
Must Operate	3VDC
Must Release	1VDC
Input Impedance	1000Ω Min.
Isolation	
Signal to Load	1500V
Signal to Base	1500V
Temperature	−30°C to +80°C

MECHANICAL ARRANGEMENT

See AC output relays on page 2144

OUTPUT DATA

Continuous Current	4A, 8A, or 12A
DC Line Voltage	2-32VDC or 2-55VDC
Off State Leakage	10mA DC
Turn On Time	50 Micro Sec.
Turn Off Time	500 Micro Sec.
Voltage Drop @ Rate Current	1.5VDC Max.
Isolation Load to Base	1500V

SIZE:
2¼L x 1¾W x 1⅛H Max.

WEIGHT:
4 Ounces Max.

TERMINATION:
Standard Models —
Control Signal:
6-32 Screws
Output:
8-32 Screws

Standard Models are furnished with ¼″ Quick Connect adapters.

Special Models can be provided with lead wires or other types of termination in OEM quantities. Consult the factory for details.

AC OUTPUT / DC CONTROL SIGNAL

These relays operate from 5.5VDC (CV-1) or 28VDC (CV-2) signals and switch loads to 3 Amps @ 120/240VAC, 60 Hz. Opto-Isolation provides complete separation of the logic circuit inputs from the AC power loads. Zero-Crossover switching and internal suppression enable the relays to switch AC motors, motor starters, solenoids and lamp loads. Dimension A is 2.00″ max.

DC OUTPUT / DC CONTROL SIGNAL

Operating from 5.5VDC (CV-3) or 28VDC (CV-6) signals, these relays switch loads to 3 Amps @ 55VDC. Opto-Isolation provides complete decoupling of the input signals from the power loads. These relays can switch DC motors, motor starters, solenoids and lamp loads. Dimension A is 2.00″ max.

DC OUTPUT / AC OR DC CONTROL SIGNAL

These relays (sometimes referred to as converters) accept power level signals up to 55VDC (CV-4) or 120VAC (CV-5) and provide an open collector transistor output. When the input terminals are energized, the output transistor switches to the ON state (saurated) providing logic level signals for all standard purposes, including DTL, TTL and CMOS among others. Opto-Isolation provides complete decoupling between the input and output terminals. A ±5VDC power supply is required to operate with these units. Dimension A is 1.25″ max.

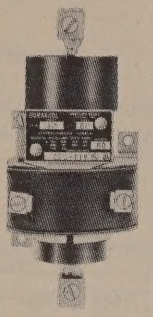
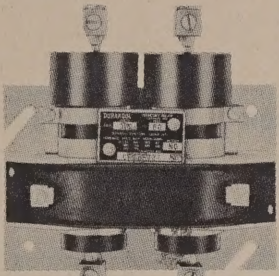
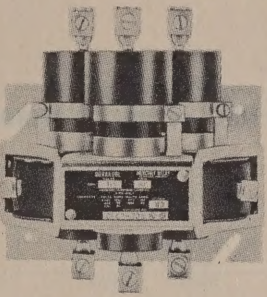
CBC Series—Normally Closed



Model CFC 700



Model CFC2 700



Model CFC3 700

CFC and CBC 700 Series devices are listed under file #E35126 and CSA file #22416. Catalog numbers other than 700 series are not U.L. or C.S.A. listed. Contact ratings are shown on page 3475. Leaded versions are also available. Only popular operating coil voltages are shown; consult the factory for part numbers of other AC and DC coils.

durakool®

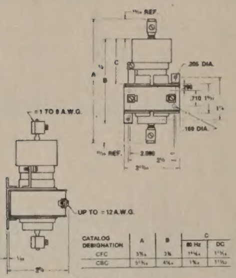
TIME DELAY RELAYS



All Durakool time delay relays feature the advantages of mercury to mercury contacts in stainless steel hermetically sealed contact tubes. Release delay functions are performed without the necessity of auxiliary external switches. All catalog numbers shown are U.L. listed bracket mount types; panel mount and cased versions are also available. Virtually hundreds of additional timing ranges and AC/DC operating coil voltages are available.

FLASHERS

Durakool BBU Timers function as self-energized recycling flashers when connected as shown above. Flashing cycles can be provided from 15 flashes to 200 flashes per minute in both AC and DC operating coil voltages.

durakool inc., 1010 N. MAIN ST. • ELKHART, IND. 46514 • 219/264-1116 • TELEX—25-8482

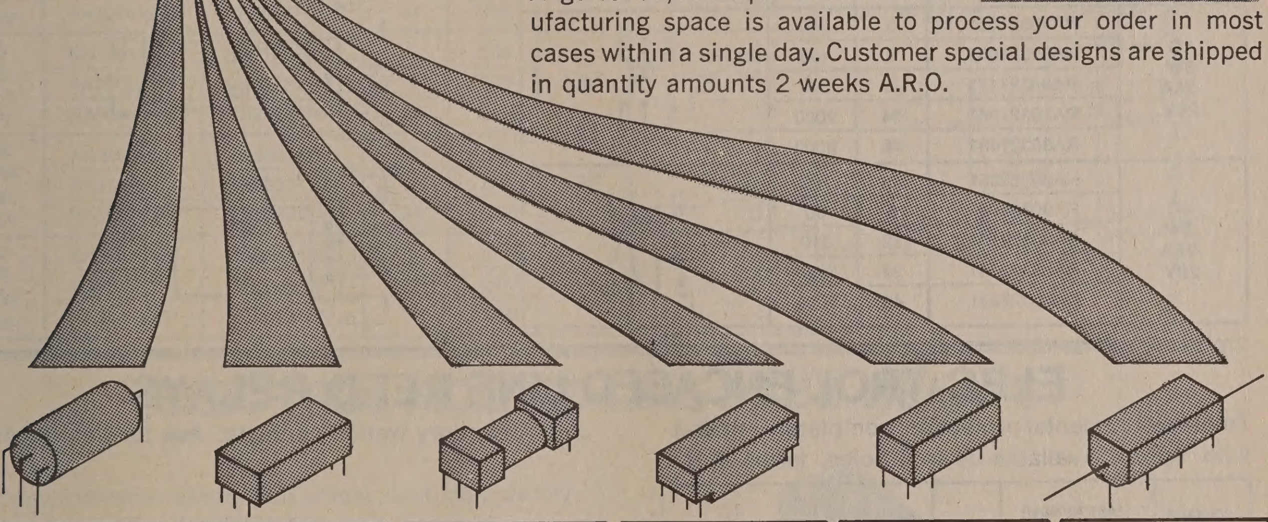
EAC

ELECTRONIC APPLICATIONS COMPANY

4918 SANTA ANITA AVENUE
EL MONTE, CALIFORNIA 91734

INNOVATIVE RELAY DESIGNS SINCE 1959

This ultra modern facility of EAC is located in the industrial hub of Los Angeles. 30,000 square feet of manufacturing space is available to process your order in most cases within a single day. Customer special designs are shipped in quantity amounts 2 weeks A.R.O.



TUBULAR	MOLDED	LITTLE GEM	JENCO Division of EAC	DIP REPLACEMENT Pin Compatible	CUSTOMER SPECIAL DESIGN
Highest volume production. Magnetic shield. Lowest cost. Same day shipment from stock. 1A to 3A, 1C to 2C, Latch, Mercury, High Voltage.	PCB mounting. Vacuum impregnation of polyamide epoxy. Highest reliability. Highest insulation resistance. 1A to 6A, 1C to 3C, Latch, Mercury, High Voltage.	PCB mounting. Open frame. Magnetic shield, encapsulated. .1 and .15 pin spacing is standard. 1A to 6A, 1C to 3C, Latch Mercury, High Voltage.	EAC acquired the Jenco line in 1974. Manufacturers of fine, high performance relays. All Jenco relays are readily available from EAC/Jenco stock.	These relays are available in all competitive configurations. Because of their inherent higher reliability, they are slightly larger than the standard DIP relay.	Design your own relay. Any pin configuration, any size, any shape, any degree of reliability. Use our EAC Application Questionnaire.
Highest overall performance for most competitive cost.	Pricing consistent with reliability requirements. See Catalog, or call EAC.	1 Form A under .75 @ 2500 pcs. 2 Form A under 1.00 @ 5000 pcs.	Jenco has relays to switch 25kv. Reliability is inherent with EAC/Jenco.	Call us for price quotations. Relay reliability is not large or expensive.	Price is **very** competitive. Tell us our limits and your requirements.

FREE CATALOGS ARE AVAILABLE BY REQUEST. TELEPHONE, TWX OR WRITE TO US OF YOUR NEEDS.

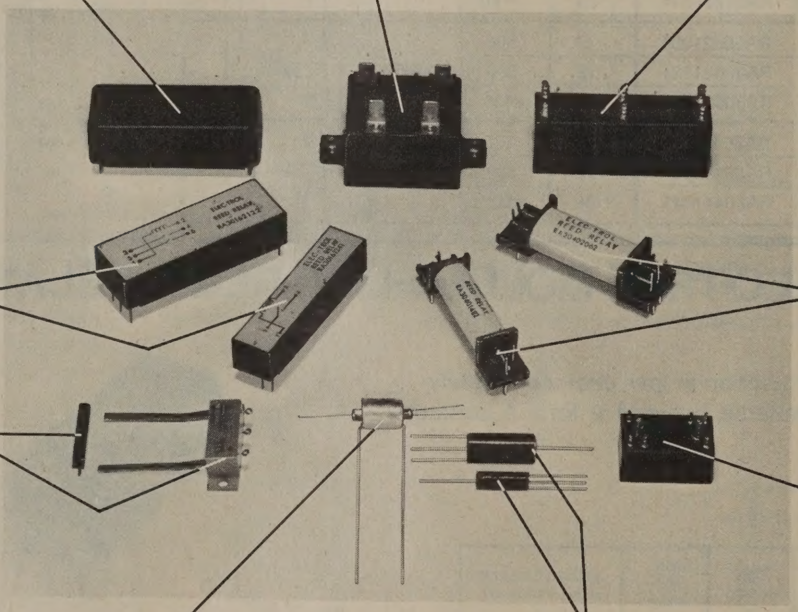
ELEC-TROL SPECIAL PRODUCTS



1-pole Form C Latching Reed Relay with up to 20W switching

Hybrid Relay with reed relay input and triac output

High Voltage Form A Reed Relay available in 1 & 2 poles with up to 7500V switching

Sealed Reed Relays available in up to 6 poles, Form A or C with up to 50W switching

Open Line Reed Relays available in up to 4 poles, with up to 50W switching

Reed Switch and Coil for proximity detection

2-pole Form A Current Sensing Reed Relay for circuit protection

High Isolation Reed Relay with 10^{15} ohms isolation between coil and reed switch

Typical 1-pole, Form A, Small Axial Lead Reed Relays

Although Elec-Trol sells more dry reed relays than any other manufacturer in the USA, we also design and manufacture a vast variety of other types of standard and special relays, both reed and solid state.

In special products, we offer services that few competitors can match. For example, our fully staffed engineering department can: (1) rapidly produce production drawings from a customer's design; (2) help the customer develop his design and prepare it for production; or (3) assume full responsibility for the complete design to meet the customer's application needs.

Also with in-house ability of designing and making all our own molds and production tools and the high volume throughput capability of our two manufacturing facilities–we can deliver large or small production quantities of a customer's specially designed product quickly and on schedule at competitive prices.

A few examples of typical custom products are shown above: but if you don't see the one you want, ask us. We'll make it.

If you have a relay requirement that cannot be met by standard products, send us your specifications or information regarding your application. An Elec-Trol Special is often the answer.

The Nation's Most Advanced Facility for the Development, Production and Testing of Relays

With over 20 years of relay experience our product line now consists of more than 20 standard relays. Within the 67,000 square feet of manufacturing space we service the switching needs for major military and industrial accounts. Quality Control is not an accident here. We believe in and practice total control of all factors which could affect the end quality of our product. Continual emphasis is placed on utilizing state-of-the-art in new designs. We encourage all of our customers to visit our facility and view the operation first hand.

Electronic Specialty reed relays are offered in a variety of package and switch configurations to allow wide design flexibility and versatility.

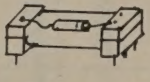
LR RELAY — Switching and Load Characteristics

The standard switches (Options B and G) are recommended for general use. Low level switching applications require other instrument grade switches (Options C and H) or mercury wetted contacts (Option E).

Switch Option	Contact Configuration	Description	Maximum Resistive Contact Rating VA	Amps	VDC	Initial Contact Resistance Ohms	Average/ Minimum Breakdown Voltage VDC	Typical Times in Milliseconds OP	OP Bounce	REL	REL Bounce
B	Form A Form B	Standard	10	.50	200	.100	400 / 275	.45	.35	.75	.35
C	Form A Form B	Instrument Grade (Low Level)	10	.50	200	.100	300 / 250	.70	.35	.75	.35
D	Form A	High Voltage Switching	10	.50	500	.100	1500 / 1350	.90	.45	—	—
E	Form A	Mercury Wetted Contacts (Zero Bounce)	50	2.0	100	.050	2000 / 1500	2.50	0.00	1.70	—
G	Form C Form B	Standard	3	.25	28	.150	300 / 250	.35	.60	.30	1.40
H	Form C Form B	Instrument Grade (Low Level)	3	.25	28	.150	300 / 250	.35	.60	.30	1.40

RELAY OPTIONS:

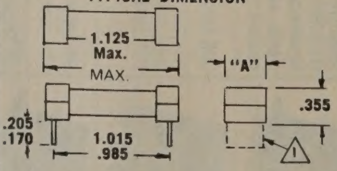
1. Electromagnetic shielding
2. Electrostatic shielding
3. Diode (Top mounted thus: LR1, LR2 mounted; internal LR3, LR4, LR5.)



SWITCH OPTIONS:

	Type	Description
1.	B & G	Standard: .5A, 10W, Form A; .25A, 3W, Form C
2.	C & H	Low level dry switch, instrument grade
3.	E	Mercury wetted contacts
4.	D	Hi voltage switching

TYPICAL DIMENSION



△1 Terminal pin spacing is on .1" grid. Standard terminals are .025 diameter tin coated copper for coil and .022 diameter tin or gold plated "Alloy 52" for switch terminals.

LR REED RELAY SPECIFICATIONS:

Characteristics: @ 25°C
Coil Resistance: ±10% of nominal.
Maximum Pull In: 80% of Nominal Voltage.
Minimum Drop-Out: 8% of Nominal Voltage.
Coil Voltage: Available in 5, 6, 12 & 24 VDC. See table for nominal resistance values.
Temperature Range: Operating . . . −40° to +85°C (−40° to +185°F).
Storage . . . −40° to +105°C (−40° to +220°F).

DEFINITION OF PART NUMBER

See detail sheets for detail explanation.

LR 5 2-4A 12-0B *

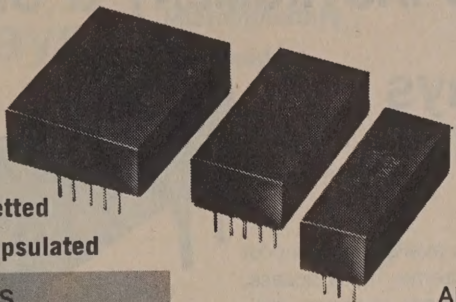
- Reed switch type B thru H.
- Shielding Options:
  - 0 - Basic Relay.
  - 1 - Electromagnetic shielding.
  - 2 - Electrostatic shielding.
  - 3 - Electromagnetic and electrostatic shielding.
- Nominal coil voltage (expressed as two digits).
- Switch configuration.
- Coil terminal location (top view):
  - 1. Diagonal. 2. Side. 3. End.
- Relay width:
  - 1 - .375 Max. 2 - .475 Max.
  - 3 - .575 Max. 4 - .675 Max.
  - 5 - .775 Max.
- Basic Series::
  - 1.25 max. long by .355 max. high.

* D added to the P/N indicates a suppression diode.
* L added to the P/N indicates 390 coil option available on LR1*-1A05-0B or LR1*-1A05-0C.

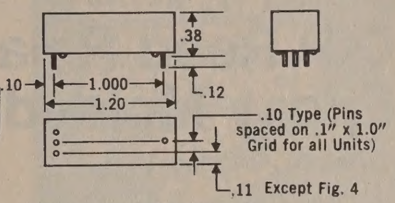
ELECTRONIC INSTRUMENT & SPECIALTY CORP.

Miniature Reed Relays

- .10″ x 1.00″ Grid
- Dry Reed
- Mercury Wetted
- Epoxy Encapsulated



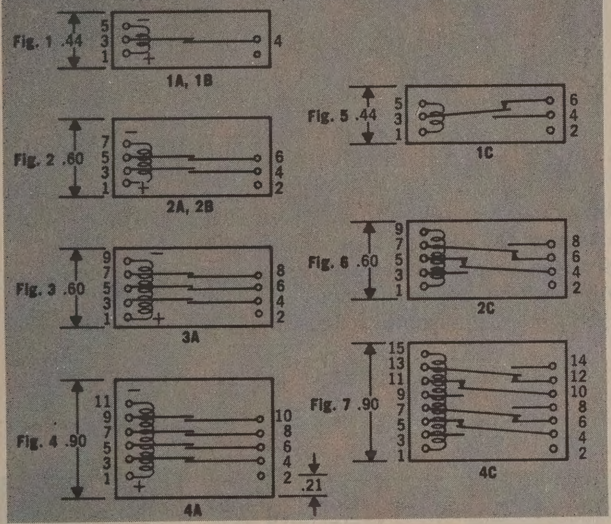
Dimensions Typical of all Units



Pins are .022/.027 Dia. Tinned

SCHEMATICS/DIMENSIONS

Note: All Views are Top of Unit — Pins on Bottom



OPTIONS

For Electrostatic Shield, add Suffix S (connected to Pin #2)
For Magnetic Shield, add Suffix H

CONTACT RATING

Dry Reed, Form A, B:

½ amp. max., 200 volts max. with 10 watts power limitation. Initial contact resistance .10 ohm max. Breakdown voltage 300 volts min.

DRY Reed, Form C:

¼ amp. max., 28 volts max. with 3 watts power limitation. Initial contact resistance .15 ohm max. Breakdown voltage 250 volts min.

Mercury Wetted Form A:

2 amp max., 100 volts max. with 50 watts power limitation. Initial contact resistance .05 ohm max. Breakdown voltage 1000 volts min.

GENERAL SPECIFICATIONS

Switching Speed, Typical*	Operate Time	Release Time	Bounce Time
Dry Reed, Form A	.5 ms	.1 ms	.2 ms
Dry Reed, Form B	.2 ms	.2 ms	.3 ms
Dry Reed, Form C	.5 ms	.1 ms	N.O. .5 ms N.C. 1.5 ms
Mercury Wetted, Form A	2.0 ms	2.0 ms	.0 ms

Insulation Resistance:
Greater than 1 × 10¹⁰ ohms, except Form C (1 × 10⁹) at 100 VDC 40% rel. hum.

Life Expectancy:
100 x 10⁶ operations at low level
10 x 10⁶ at rated load
Mercury Wetted 10 X higher

Operate Temperature: −30°C to +65°C

Storage Temperature: −55°C to +85°C

* Consult factory or local representative for performance details.

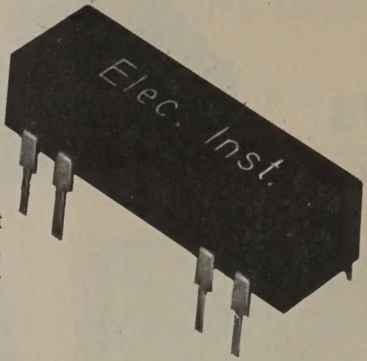
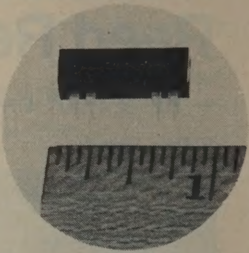
ELECTRONIC INSTRUMENT & SPECIALTY CORP.

DIP Reed Relays Epoxy Molded

Form 1A, 2A, and 1C





ACTUAL SIZE

Now high-performance DIP reed relays available in low-cost Lead-Frame configuration. Offering extremely easy access, these superbly engineered relays are made to provide reliable, trouble-free operation at inexpensive prices.

- **Low Profile**
- **Automatic Insertion**
- **Improved Accessibility**
- **Driven Directly from TTL & DTL Logic**

Electronic Instrument and Specialty Corporation is a leading producer of reed relays for industrial and commercial applications. EI&S Corp. assures highest quality and superior performance from all reed relays under the most demanding conditions.

GENERAL SPECIFICATIONS

Speed, Typical*	Operate Time (excluding bounce)	Release Time
Dry Reed, Form 1A	.2 to .5 ms	.1 ms
Dry Reed, Form 1C (N.O.)	.4 ms	.1 ms
Mercury Wetted, Form 1A	2 ms	2 ms

Insulation Resistance: 1 x 10^{11} ohms min., except Form C (1 x 10^{10})

Life Expectancy: 100 x 10^6 operations at low level; 10 x 10^6 at rated load, Mercury Wetted 10 X higher

Operate Temperature: 0°C to +65°C

Storage Temperature: −55°C to +85°C

*Consult factory for performance details.

ORDERING INFORMATION

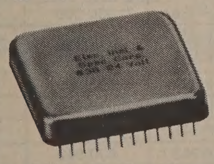
To order, specify Catalog Number, Coil Voltage and Optional Electrostatic Shield if required.

Example:	2160S	12	S
	Catalog Number	Coil Voltage	Electrostatic Shield

SPECIAL PURPOSE RELAYS

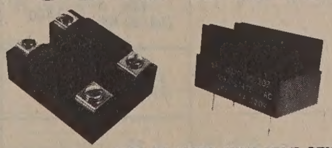
Electronic Instrument has produced a wide assortment of tailored relays beyond its standard lines. Some of these styles are shown below and are available with almost off-the-shelf delivery. If your requirement is not a standard, send us your specifications and let us prove our capability to produce the relay for your application at economical prices.

MULTIPLE FLAT PACK



Relay designed to permit 0.5 inch PC board stacking; will insert easily in standard contact strip.

Solid State AC Relays



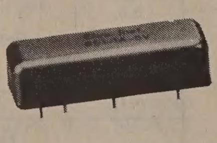
- Optoelectronic Isolation
- Requires Little Power; TTL; MOS Logic or even a Photocell Provides Ample Power
- Zero Voltage Crossover
- Contacts AC SPST (Normally Open)

1 TO 25 AMPS AVAILABLE SEND FOR COMPLETE LITERATURE

VRM (MERCURY-WETTED VERTICAL)

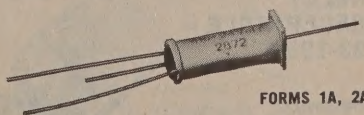
Solution to problems encountered when printed circuit boards must be mounted horizontally — yet require stable contact resistance with no bounce.

HIGH TEMPERATURE



A wide selection of high temperature relays capable of operating up to 150°C are available.

LOW COST



FORMS 1A, 2A, 1B

Axial Leads
Size: ⅜ dia. x ⅞ long (bobbin) Form 1A only
Rating: ½ amp., 200 VDC, 10 watts

The STANCOR Type 93 relays are used in vending machines, heating, air conditioning, business machines, control panels, appliances, data processing equipment, office machines, communications systems and instruments.

The coil bobbin and contact terminal block are molded plastic and are resistant to arc tracking. The contact terminal allows - (a) easy insertion and removal of connectors, (b) stresses caused by wiring hook-up cannot change relay adjustment. The contact springs are molded as an integral assembly and give excellent stability in all environmental conditions. The armature contact springs are connected to the terminals by flexible insulated leads welded to the terminals. Connections for the contacts and coil are located on the front of the relay.

Solder terminal type has combined front, single hole screw and stud mounting. Printed circuit* type may be controlled by SCR if firing angle is no more than 10 degrees.

The plug-in relay has high impact case and standard pin connections.

Quick connect type designed for front mounting or polarized socket mounting. Use 93-185-1 socket kit. Relay has .20 x .187 terminals. UL & CSA recognized under Component Recognition Program.

CONSTRUCTION FEATURES

Interchangeable Mounting — The base plate of the 154 series contactors has been designed to provide mounting ease when replacing virtually any competitive contactor on the market.

Non-Position Sensitive — The spring-actuated armature mechanism of the 154 contactor allows you to mount the contactor in any convenient mounting position . . . a great help in designing control boxes for today's compact equipment.

Low Coil Wattage — The efficient magnetic design and advanced materials used in the 154 give you the advantage of low coil wattage without sacrificing the mechanical power needed for long, reliable life at rated load. Low coil wattage is especially important when contactors are controlled by 24 V. NEC Class 2 circuits. Low wattage allows you to optimize transformer size/cost requirements.

Double-Break Contact Action — The contact structure and double-break action of the 154, along with oversize contacts and contact cover (standard on 40 ampere version), provide superior reliability and life at full rated load. The 154 will reliably deliver life equivalent to 20 years of cycling at full rated load on a central air conditioning system.

CONVERSION INSTRUCTIONS

All 10 and 15 ampere contact assemblies on standard type C contactors are normally open. To convert to normally closed, use screwdriver. No special parts needed.

1. Remove movable contact assembly and lock washer by backing off terminal nut "A".
2. Loosen screws "B" and remove stationary contact assemblies.
3. Invert movable contact assembly, and replace on contactor with flat "I" spring resting on contact block. Contacts facing out.
4. Remove screws "B" from, and reinsert into opposite end of, stationary contact assembly. Re-install stationary contact assemblies, holding contacts in alignment with movable contacts while tightening screws.

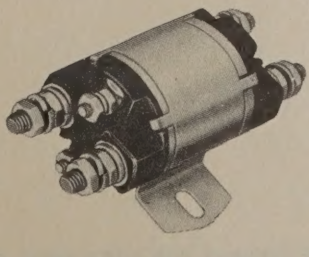
6 TERMINAL



- Max. Pick-Up 70% rated coil voltage
- Design Ambient −40°C to +65°C.
- Maximum Continuous coil watts: 12 @ rated voltage.
- Recommended Mounting Position: Unit in vertical plane with coil terminals up. Horizontal plane is acceptable.
- Design meets U.L. 583 Industrial Truck Standard. Dust and splash proof cover.
- Application: Controlling D.C. starting motors on gasoline engine driven auxiliaries. Battery charging power circuits, motor reversing circuits as found in winch applications.
- The 124 is also applicable where ruggedness and high current capacity is required for D.C. mobile equipment such as: in-plant lifts, industrial equipment, recreational vehicles - golf carts, camp trailers, motor homes.

ENGINEERING DESIGN DATA

D.C. Type	Coil Rating	Operation in % of Nom. Coil Rating		Breakdown Voltage All Terminals-60 Hz RMS			Contact Material		Electrical Life		Mechanical Life§		Max. Oper. Amb. °F
	Nominal Magnetic Coil Rating (Watts)	Pick-up	Max.* Safe Operate	Opposite Polarity	Open Contacts Same Polarity	To Ground	Power	Pilot	Oper. At Rated Load	Oper. Per Min.	Oper. At No Load	Oper. Per Min.	
60	2	75%	110%	1000	1000	1000	Fine Silver	—	100,000	4	250,000	4	122
150	3	75%	110%	500	500	500	Silver Alloy	—	500,000	12	1,000,000	12	122

* Magnet coils designed for continuous duty. Do not operate at rate higher than indicated under Mechanical Life.

§ Based on steady state test under laboratory environmental conditions. Consult factory if application involves unusual load, speed of operation, off-on ratio environmental or operating conditions. Electric life substantially greater when operated below rated load.

* Magnet coils designed for continuous duty. Do not operate at rate higher than indicated under Mechanical Life.
§ Based on steady state test under laboratory environmental conditions. Consult factory if application involves unusual load, speed of operation, off-on ratio, environmental or operating conditions. Electric life substantially greater when operated below rated load.
† Load tests — making inrush ratings (0.4 to 0.5 P.F.) — breaking 125% continuous rating (0.65 to 0.8 P.F.).

OPERATION DESCRIPTION

The 188 relay is a single pole On-Off miniature Bi-stable device. When coil power is applied, the contacts are open. When coil power is removed, the contacts will alternately close or be held open.

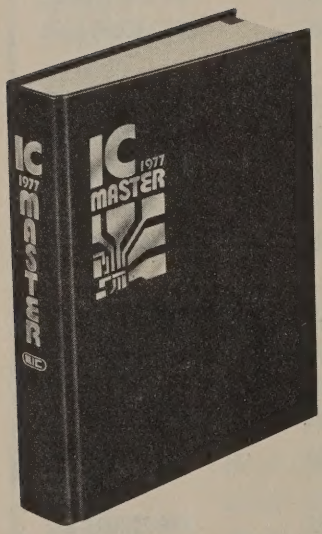
WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

United Technical Publications, 645 Stewart Ave., Garden City, NY 11530

MERCURY FILM RELAYS

- OPERATE IN ALL POSITIONS
- TWO BILLION CYCLE RELIABILITY
- NO CONTACT BOUNCE
- STABLE CONTACT RESISTANCE

Often engineers are not satisfied with the performance of dry reed relays. Mercury relays offer superior life, reliability and contact resistance stability. Unfortunately they operate in only one position — straight up.

Mercury film relays solve this problem. The Series M relay offers the user all of the benefits of mercury relays, yet they operate in all mounting positions.

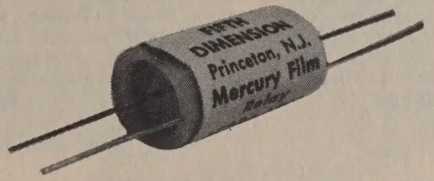
The Series M is reliable. Tests on over 100 units have established that the Mean Cycle Between Failures exceed 2.0 Billion operations. The Series M has long life. One customer has accumulated over 11 Billion operations per contact without failure. Contact bounce is not observed. Seldom will contact resistance change by more than 0.015 ohms over life. Both low level and power loads are reliably switched.

Broken, cracked, or stressed glass switching capsules are a primary cause of early life relay failures. The Series M and Series E feature the LC2 switching chamber. This is a patented device built not of glass but of a rugged welded hermetically sealed metal construction. The LC2 has only one moving part. An armature spring responds to the magnetic field of the coil and closes on the stationary contact. In doing so two mercury films are merged to present a near perfect signal conducting path. No pools of mercury slosh about in the contact chamber. All inside metal walls are wetted with a film of mercury. The surface tension and wetting force so tenaciously hold the mercury films in place that gravitational forces have no effect on operation. Yet these mercury films are free to communicate throughout a system which renews and reheals the relay contacts with each operation.

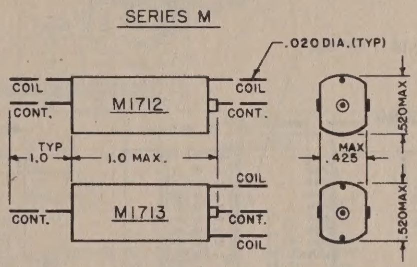
Two mercury film relays are described on this page. The Series M is an open frame relay with flexible transistor type axial leads. It is designed to be completely functional yet low in cost.

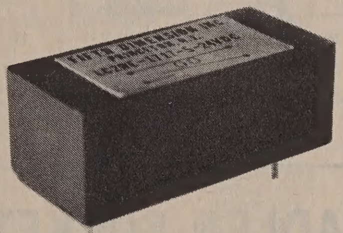
The Series E is a tough completely encapsulated relay with PCB pins formed for the popular 1.0 inch by 0.10 or 0.15 inch grid spacing. The Series E is a relay built to take punishment mechanically, electrically and environmentally.

For engineering information and test data on our complete family of LC2 Switches and Relays contact the factory.

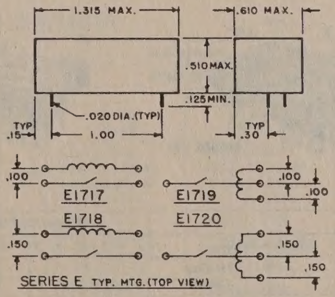


SERIES M





SERIES E



SPECIFICATIONS

	250 mw COIL	500 mw COIL
Contact Form	'A'(1)	'A'(1)
Life	Indefinite	Indefinite
Reliability (MCBF)	$>2 \times 10^9$(2)	$>2 \times 10^9$(2)
Rated Contact Load (DC)	5V; 2 amps 24V, 1 amp 200V; 0.1 amps	5V; 2 amps 24V, 1 amp 200V; 0.1 amps
Contact Resistance	0.15 ohms	0.15 ohms
Contact Res. Stability	±0.015 ohms	±0.015 ohms
Contact Breakdown	1250 vac(3)	1250 vac(3)
Coil Resistance		
5 VDC	100 ohms	50 ohms
12 VDC	575 ohms	288 ohms
24 VDC	2300 ohms	1150 ohms
Operate Time	4.0 ms	3.5 ms
Release Time	4.0 ms	3.5 ms
Contact Bounce	None	None

NOTES: (1) Contact factory for Form B; Form C; and latching models.
(2) Based upon tests conducted on over 100 units tested to over 3.4×10^{10} operations.
(3) Contact factory for higher voltage models.

4C	1.172
6C	1.391
8C	1.594

T154/T163 industrial relays with versatile mounting means including solder, printed circuit board and socket options. (Refer to Socket Guide) Sensitivity selection to match applications ranging from 20 to 140mW per pole. Contact selection to meet load switching requirements. U/L Recognized File #E206041.

Voltage relays adjusted for maximum pickup of 75% of nominal coil voltage.

Weight: 1.0 to 6.0 ounces.

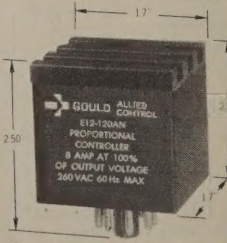
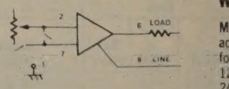
SOLID STATE PRODUCTS

PROPORTIONAL CONTROLLER—SERIES E12

Type E12 solid state proportional controllers control loads up to 8 amperes. When terminal pins 2 and 7 of the octal plug connector are shorted, the unit provides 100% output voltage. When a resistance is substituted for the short the unit will provide as low as 10% full output voltage. By varying the resistance, the output voltage can be varied from 10% to 100% of the full line voltage. This is especially useful for dimming lamps, controlling heaters, and controlling motor speeds.





Wiring Diagram

Maximum resistance across Pins 2 & 7 for minimum output
120V line, 250K, ½ watt
240V line, 500K, ½ watt

Catalog Number	E12-120AN
Max. Load Current	8 Amp
Output Voltage	260 VAC
List Price	$21.20

CRADLE® SERIES/MAGNETIC LATCH RELAYS

T351/T362 Bi-Stable and Magnetic Latch industrial relays. Single or Dual Coil construction. Versatile mounting means, including solder, printed circuit board and socket options. (Refer to Socket Guide). Contact selection to meet Load Switching Requirements. **T351** has single point contacts. The **T362** has bifurcated contacts. Dimensions and appearance are same as for 2C and 4C cradle relays, see page 1.1686

Input voltage: standard 12 and 24 VDC. Other voltages available on request.

U/L Recognized File #E-20604

Weight: 1.5 to 4.0 ounces.

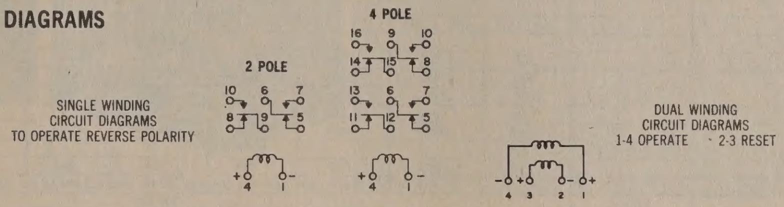
MAGNETIC LATCH WIRING DIAGRAMS (Reset Position Shown)



MINIATURE PC RELAYS—SERIES MPC/MPCS

These miniature pc board mounted relays feature low profile high density packaging with unique hingeless armature for longlife, gold plated silver contacts for switching low level up to 2 amperes (50 watts maximum per pole). Interlocking housing provides maximum protection from contamination and increases reliability. The standard version MPC is available in 1, 2 and 4 pole configurations. The sensitive version MPCS has a 1-pole or 2-pole configuration.

Relays are adjusted for:

Pickup—Maximum—75% of Nominal Coil Voltage.

Drop-out—Minimum—10% of pickup maximum.

Maximum Power Dissipation 1.3 watts at 25°C.

Weight 8 to 11 grams.

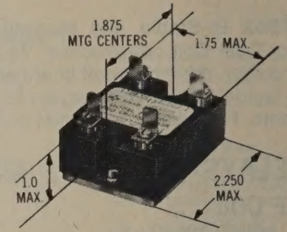
SOLID STATE PRODUCTS/SOLID STATE RELAYS

OPTO ISOLATED POWER RELAYS—SERIES E-3



This new line of solid state relays offer the following advanced design concepts for flexible application.

ZERO VOLTAGE SWITCHING—All Series E-3 Power Relays are designed for True Zero Voltage switching. Power is applied to load at zero-voltage cross-over. Power is removed from load at zero-current cross-over.

HIGH NOISE IMMUNITY—Gould—Allied Control has virtually eliminated misfiring due to RFI transients. Our testing shows the Series E-3 Power Relay to be superior to competitive units under identical test conditions.

HIGH IN-RUSH CAPABILITIES—The Series E-3 Solid State Power Relay has been tested to and is guaranteed to meet in-rush loads of 1000% of rated current.

PHOTO-ISOLATED—Input-Output circuitry is isolated by the use of latest state of the art technology. The use of light emitting diode and the photo detector provide circuit isolation of 1560 VAC.

INTEGRATED CIRCUIT COMPATABLE—The Series E-3 Solid State Relay operates directly from and is compatable with the computer age integrated technology allowing a wide range of design applications.

SIGNAL VERSATILITY—The Series E-3 Solid State Power Relay is available in three input signal models allowing wide versatility in application selection.

ONE MODEL FOR ALL OUTPUT VOLTAGES—One model of the Series E-3 Solid State Relay is used to cover all commonly used voltages providing the user with a single model inventory in commercial applications. (Output voltage: 80 to 280 VAC, 47-63 Hz).

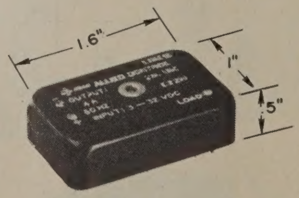
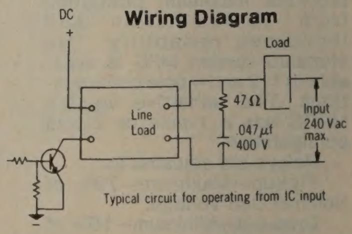
SOLID STATE PRODUCTS/SOLID STATE RELAYS

PRINTED CIRCUIT, 4 AMP, SINGLE POLE—SERIES E22





Typical circuit for operating from IC input

Type E22 miniature solid state relays are full-wave power switches which control either resistive or inductive ac loads up to 4 amperes. They control over the full wave cycle, beginning onehalf cycle after initial turn-on. When input is removed, the relay de-energizes the load when the current crosses zero. These features virtually eliminate electrical noise, and make the relay ideal for use on computer logic circuit boards having low noise immunity. Light emitting diode and photo detector provide input output isolation, thereby eliminating interfacing problems. DC input relay models are reverse polarity protected as well.

Input Voltage	Catalog Number	Output
DC		
3-32VDC	E22N	260VAC 4 Amp 50-60 Hz

ELECTRONIC
ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE
POUR LES INGI NIE
DER P

The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to - and from - Western Europe and the United Kingdom.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 products alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe and the United Kingdom. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

OPTO-ISOLATED SOLID-STATE RELAYS 2½ to 40 amps

Solid-state relays ready for your circuit design. PCB or surface mounted units designed to switch inductive, capacitive or resistive loads up to 40 amps.

Special features:

- Optically coupled
- Zero voltage synchronous switching
- 1500 VAC isolation
- 2½ — 40 Ampere rating
- PCB mount or lug terminals
- Epoxy encapsulation
- 120 or 240 VAC switching capability.

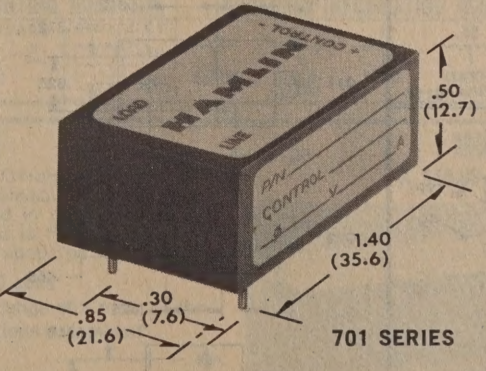
723 SERIES



701 SERIES

HYBRID SOLID-STATE RELAYS 1½ to 6 amps

PCB or surface mounted units capable of controlling inductive, capacitive, high-inrush or resistive loads.

Special features:

- 1500 VAC isolation
- On/off switching
- 1½ — 6 amps rating
- PCB mounting or lug terminals
- Epoxy encapsulation
- 120 or 240 VAC switching capability

DESIGN ENGINEERS SOLENOID KIT

A MAGNETEC INNOVATION . . . A unique C-frame Solenoid Kit which the design engineer will find indispensable. The **192 combinations** of Series 'S' Solenoids included in the kit allow the engineer to go from initial design concept to final specification by simply tailoring his own . . . right on the spot! The Kit includes:

- 8 solenoid sizes
- 6 linkage options
- 4 action options
- 24VDC coils
- force range of 8 oz to 14 lbs
- all options assembled

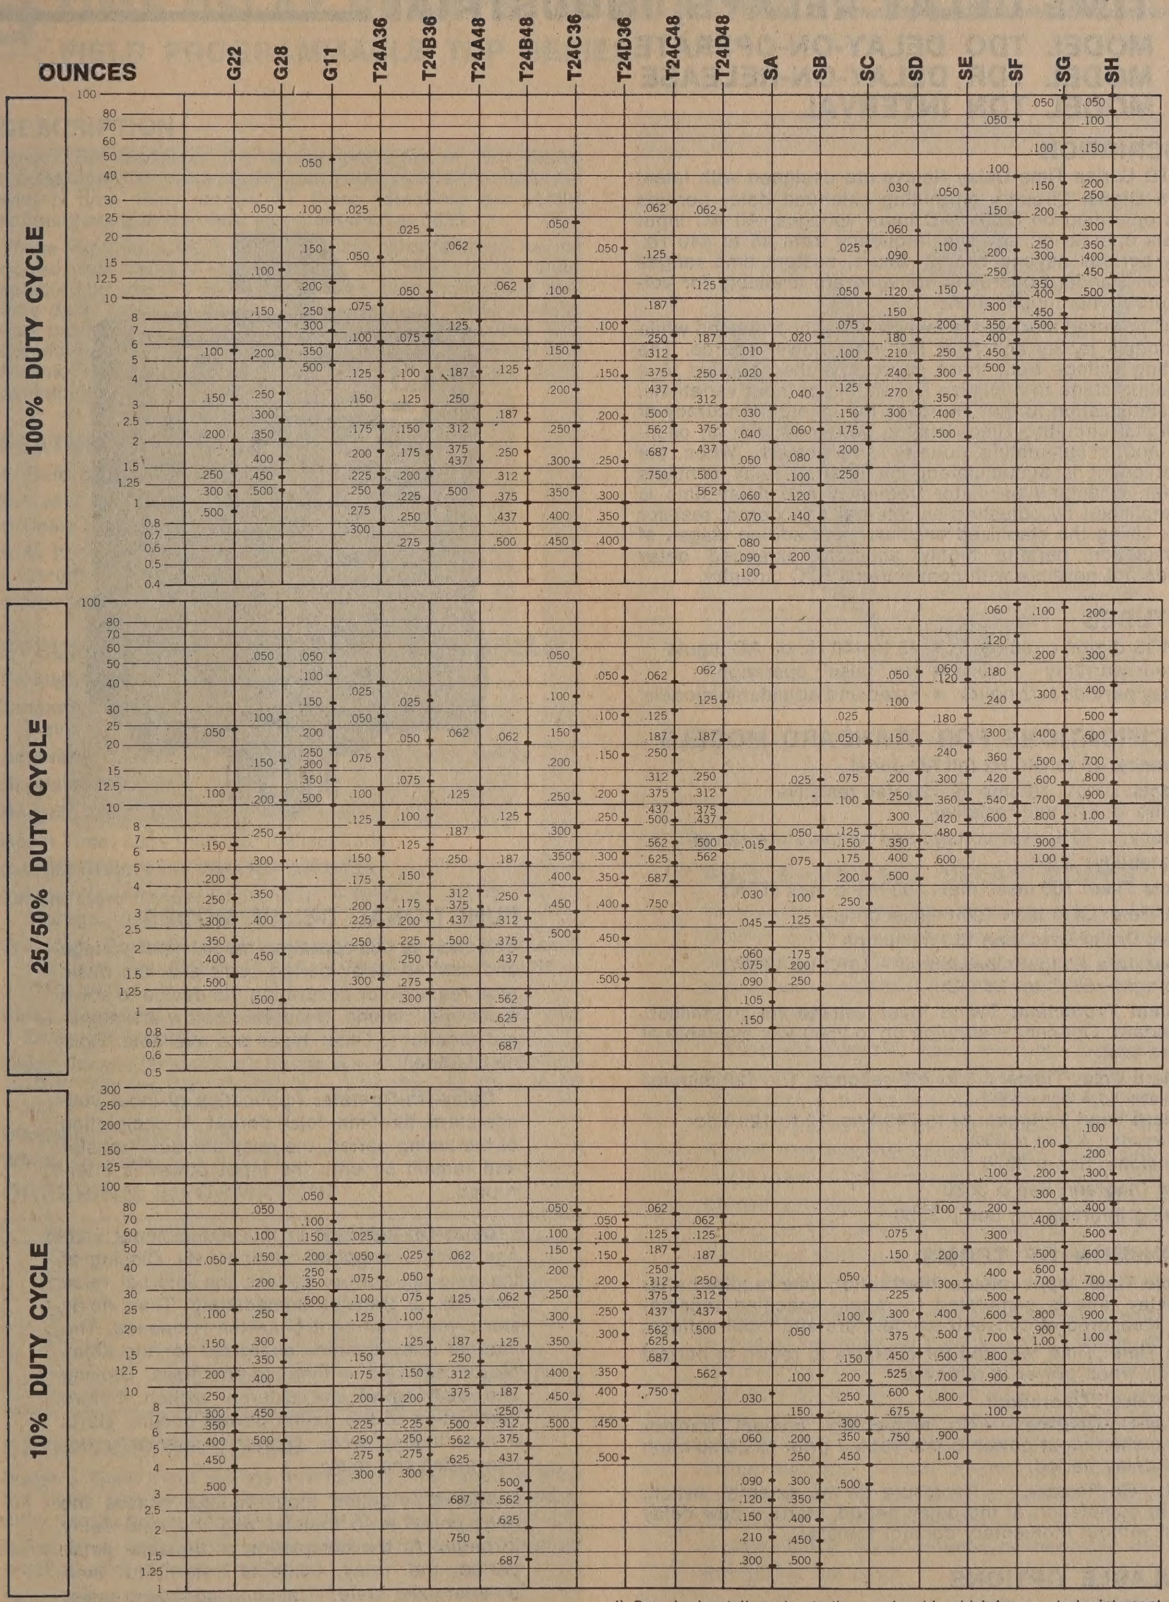
SELECTOGRAPH

FORCE vs. STROKE



HOW TO USE THE SELECTOGRAPH

1) Calculate — Duty Cycle = $\frac{\text{"on time"}}{\text{"on time"} + \text{"off time"}}$ x 100.

2) Select graph covering duty cycle nearest that of application.

3) Locate required force on vertical axis.

4) Scan horizontally and note those solenoids which have a stroke intercept both above and closest to the force line being scanned.

5) Refer to product description and select the type that best meets physical requirement.

6) Using a coil voltage of 6, 12, 24 or 120VDC, determine Magnetec part number.

TIME DELAY RELAYS, INDUSTRIAL

MODEL TDO DELAY-ON-OPERATE
MODEL TDR DELAY-ON-RELEASE
MODEL TDN INTERVAL

DESCRIPTION

The TD Series Time Delay Relays are designed with latest CMOS Digital Circuitry permitting extended delay periods when operating on DC or AC input voltages. All AC input models operate on any line frequency from 45 to 440 Hz. Delay periods beyond two (2) hours, custom time ranges and non-standard operating voltages are available for volume production applications.

All DC powered models are reverse polarity protected while AC models rectify and filter the input power source. The resulting voltage from these sources is then applied to a regulating stage to minimize the effects of input variations. This stabilization further improves the inherent accuracy of the digital circuitry. Time delay is produced with an oscillator and accumulating counter arrangement. When the preset count is accumulated, the internal relay contacts transfer. Changing oscillator frequency and delay time is accomplished by adjusting an internal or external resistor value. Using the stabilized oscillator and adding stages of accumulation permits highly accurate extended delay periods not possible with conventional R/C circuitry.

FEATURES

- CMOS digital circuitry
- 1 year warranty
- Delay periods to 2 hours
- 45 to 440 Hz on AC inputs
- No "false" operation*
- Fixed and adjustable models

SPECIFICATIONS FOR STANDARD MODELS

Frequency: 45 to 440 Hz (all AC units)

Contacts: DPDT, 10 amp @ 120 Vac resistive
5 amp @ 240 Vac resistive

Accuracy: ±10% over voltage and temperature range

Repeatability: ±2%

Recycle Time: 100 msec max. 300 msec max (TDN)

Reset Time: Less than 100 milliseconds

Current Drain: Less than 150 milliamps

Temperature Range: Operational −10°C to +55°C
Storage −55°C to +85°C

Transient Protection: Twice input voltage for 1 millisec. standard. Optional Protection up to 2500 Vac available at extra cost.

Standard Delay Times: 0.3 to 300 seconds, 1 to 120 minutes (see charts 1 & 2 on p 3530)

Standard Input Voltages: 24 to 240 Vac, 12 to 120 Vdc (see charts 1 & 2 on p 3530)

Dimensions: See p 3530

Wiring Diagram: See p 3530

Ordering Information: See p 3530

DEFINITION OF TERMS

Recycle Time: Input voltage interruption time required after the delay time is completed to regain specified repeatability. Measured at constant temperature and input voltage.

Reset Time: Time required for contacts to return to normal position when power is removed.

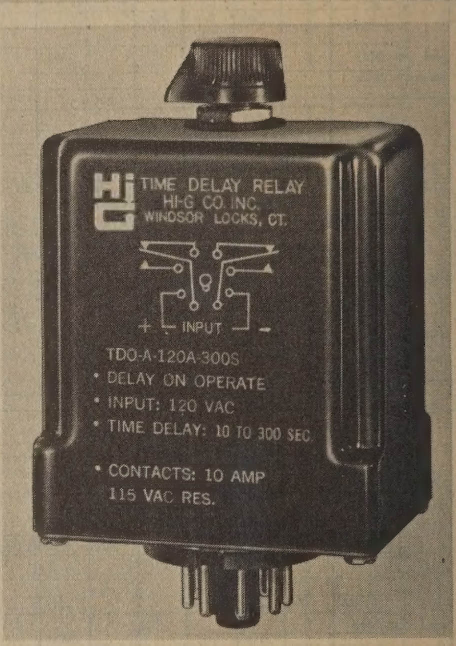
***No "False" Operation:**

Delay-On-Operate — No momentary contact transfer occurs when input power is interrupted prior to completion of the delay period.

Delay-On-Release — Reclosure of the external switch, prior to completion of the delay period, starts a new delay period without momentary contact transfer.

AVAILABLE OPTIONS

- Repeatability — ±1%
- Accuracy — ±5%
- Input voltage as required
- Delay times beyond 2 hours
- Specialized functions



FUNCTIONAL DELAY MODES

Selection of the operating mode, input voltage and desired delay period completes the basic requirements for describing the device to solve most applications. Described below are standard functions. Other types are available. Contact factory.

Delay-On-Operate: Application of input voltage starts the time delay period. At completion of the timing period, the relay contacts transfer and remain so until the input power is interrupted.

Delay-On-Release: In this mode, input voltage must be supplied continuously. Closing of the external control causes the internal relay contacts to transfer immediately. Time delay starts when that control switch is opened. The internal relay remains energized for the delay period selected — then de-energizes. Closing and opening of the external switch, before completion of the timing period occurs, starts a new timing cycle without momentarily de-energizing the relay.

Interval: Applied input voltage causes the relay contacts to transfer and the time delay to begin. At the completion of the time delay period the relay contacts return to their de-energized state. A second contact transfer and time delay period is initiated by interrupting the input voltage for at least the minimum recycle time stated.

TIME DELAY RELAYS, INDUSTRIAL

FIELD PROGRAMMABLE TDP SERIES

DESCRIPTION

Each TDP Model in this series performs in two Delay modes, operates on multiple input voltages and functions on several time delay ranges. All these selections are easily accomplished in the field as detailed on p 3530.

These versatile CMOS Digital Timers, programmed as required, will replace a multiplicity of conventional units selected by specific operating voltage, functional mode and time delay range. In addition to obvious R&D uses, production products designed with the TDP Series devices will benefit by providing component standardization, permit low inventory levels and at the same time enhançe spare parts availability.

FEATURES

- Field programmable
- 1 year warranty
- Delay periods to 2 hours
- 45 to 440 Hz on AC inputs
- CMOS digital circuitry
- No "false" operation*

SPECIFICATIONS FOR STANDARD MODELS

Frequency: 45 to 440 Hz (all AC units)

Contacts: DPDT, 10 amp @ 120 Vac resistive
5 amp @ 240 Vac resistive

Accuracy: ±10% over voltage and temperature range

Repeatability: ±2%

Recycle Time: 100 milliseconds max.

Reset Time: Less than 100 milliseconds

Current Drain: Less than 150 milliamps

Temperature Range: Operational −10°C to +55°C
Storage −40°C to +85°C

Transient Protection: Twice input voltage for 1 millisec. standard. Optional Protection up to 2500 Vac available at extra cost.

Delay Functions: Programmable, Delay-On-Operate and Delay-On-Release

Delay Ranges (selectable): Range A — 0.3 to 10, 3 to 80 and 10 to 300 seconds; **Range B** — 1 to 15, 2 to 30, 4 to 60 and 8 to 120 minutes

Dimensions: See p 3530

Wiring Diagram: See p 3530

ORDERING INFORMATION

Model	Delay Range	Operating Voltages ±10%
TDP-5	A	12 Vdc and 24 Vdc
TDP-1	A	24 Vac, 24 Vdc and 120 Vac
TDP-2	A	120 Vac and 240 Vac
TDP-6	B	12 Vdc and 24 Vdc
TDP-3	B	24 Vac, 24 Vdc and 120 Vac
TDP-4	B	120 Vac and 240 Vac

DEFINITION OF TERMS

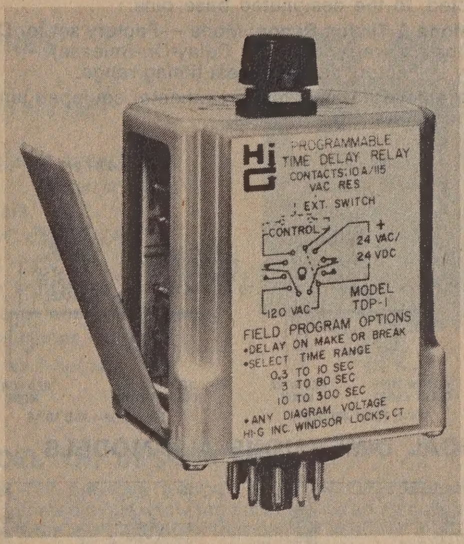
Recycle Time: Input voltage interruption time required after the delay time is completed to regain specified repeatability. Measured at constant temperature and input voltage.

Reset Time: Time required for contacts to return to normal position when power is removed.

***No "False" Operation:**

Delay-On-Operate — No momentary contact transfer occurs when input power is interrupted prior to completion of the delay period.

Delay-On-Release — Reclosure of the external switch, prior to completion of the delay period, starts a new delay period without momentary contact transfer.



PROGRAMMABLE DELAY MODES

In addition to selecting operating voltage and desired delay range, the function (mode) may be programmed. Complete programming details are shown on p 3530. Choice of operating functional modes are:

Delay-On-Operate: Application of input voltage starts the time delay period. At completion of the timing period, the relay contacts transfer and remain so until the input power is interrupted. The external control switch is not normally used in this mode, however, making and breaking of this switch after completion of the timing period provides a convenient alternate method of starting a new timing cycle without interrupting input power.

Delay-On-Release: In this mode, input voltage must be supplied continuously. Closing of the external control causes the internal relay contacts to transfer immediately. Time delay starts when that control switch is opened. The internal relay remains energized for the delay period selected — then de-energizes. Closing and opening of the external switch, before completion of the timing period occurs, starts a new timing cycle without momentarily de-energizing the relay.

TIME DELAY RELAYS, INDUSTRIAL
TDO, TDR, TDN, AND TDP SERIES (cont'd)

SERIES TDP Additional Data — See p 3529 for description

PROGRAMMING INSTRUCTIONS

Operating Voltage: Connect the single operating voltage selected, to the designated base pins.

Delay Mode & Timing Range: Mode — Factory set for Delay-On-Operate (re-program for Delay-On-Release). Delay — Factory set for lowest timing range.

Re-programming: Relocate the connector equipped jumpers as shown (see Fig. #1 & #2).

COMMON FEATURES

- CMOS digital circuitry.
- AC versions operate 45 to 440 Hz.
- Non interacting controls.
- Transient and reverse polarity protection.
- No false operation.
- DPDT 10 amp res. contacts.
- **INPUT:** 24 VAC or 24 VDC or 120 VAC.
- **TEMPERATURE RANGE:** −10°C to +55°C.
- **ACCURACY:** ±10% over temp./volt range.
- **REPEATABILITY:** ±2% over temp./volt range.
- **CURRENT DRAIN:** 150 milliamps maximum.
- **TIMING AVAILABLE:** Up to 2 hours.

MODEL TDF DESCRIPTION

Model TDF provides continuous OFF/ON cycling. Socket wiring selects any one of the **three** input voltages that can be used for input power. Application of this power always starts the knob adjustable OFF period first. The ON period follows with its duration controlled by the second knob. OFF/ON adjustments are independent and do not interact. Standard units operate within a single time range from the three choices shown below. For delay ranges to 2 hours or beyond, mixed timing ranges and fixed timing versions — consult the factory.

TIME RANGES:

Range 1 — 0.3 to 10 seconds.
Range 2 — 3 to 80 seconds.
Range 3 — 10 to 300 seconds.

MODEL TDI DESCRIPTION

Model TDI provides a single OFF/ON/OFF sequence for each initiated cycle. How the socket is wired selects any one of the **three** input voltages that can be used for input power which is applied continuously. Each cycle is initiated by a momentary or maintained external contact closure which always starts the knob adjustable OFF period first. A knob adjustable ON period follows and then goes OFF again to complete the cycle. The OFF/ON controls are independent and do not interact. Standard units operate within a single time range from the three choices shown below. For delay ranges to 2 hours or beyond, mixed timing ranges and fixed timing versions — consult the factory.

TIME RANGES:

Range 1 — 0.3 to 10 seconds.
Range 2 — 3 to 80 seconds.
Range 3 — 10 to 300 seconds.

ADJUSTABLE TIMING FORMULA

The resistance required to obtain timing within this range is determined by using the formula:

Rx = 400K (T/T max.) −40K
Rx = External Res. in OHMS
T = Desired time in seconds
T max. = Maximum time (code)

A high quality deposited carbon ±1%, .1w (min.) resistor is recommended for external resistance.

DETERMINATION OF MODULE PART NUMBER — ORDERING INFORMATION

Hi-G Adjustable Time Delay Modules cover one decade, e.g., 62 milliseconds to 620 milliseconds; you may select any decade that best suits your application within the range of 50 milliseconds to 240 seconds. (Of course, longer ranges are available on special order.) The upper decade limit is $T_{max.}$ in the timing formula and is the timing code number in the part number described in the following paragraph.

The part number for a Hi-G Time Delay Module consists of three elements: The series number (from the Table), a letter signifying mounting style, and the timing code number. The timing code number consists of four digits and gives the time in milliseconds. The first three digits are the significant figures and the last digit is the number of zeroes following the significant figures; thus, 50 milliseconds would be coded 0500, 1.1 seconds would read 1101, and 1 minute (60 seconds) would be 6002.

A typical part number for an adjustable timing module is 1722-C-1102; this is a DC unit in the −55°C to +125°C temperature range with a 2PDT contact arrangement, in a Style C mounting, and with a time delay range of 1.1 to 11 seconds.

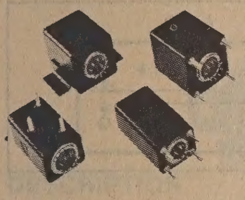
HI-G CO., INC. 580 SPRING STREET, WINDSOR LOCKS, CONN. 06096 / PHONE: (203) 623-2481 / TWX: 710-420-0592

TIME DELAY RELAYS, HERMETIC SEAL

DELAY-ON-RELEASE

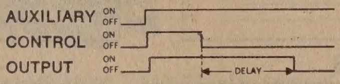
FIXED SERIES **5600**

ADJUSTABLE SERIES **5700**



FUNCTION

Apply auxiliary power. Upon application of control power, the output will energize. Remove control power and initiate delay period.



ELECTRICAL PARAMETERS

INPUT: Units will not be damaged by reverse application of input voltage.
Auxiliary — 18 - 31 VDC; 105 - 125 VAC; 400 Hz.
Control — 10 - 31 VDC. Ground common to aux. power line.
10 volts minimum must be applied for a minimum duration of 20 milliseconds to energize output and arm the timing circuit.

DELAY TIMES: Overall, 50 msec to 240 msec (ADJ), 600 msec (FIXED). Units rated to 10 amperes, min. delay 100 msec, max. 2 hrs. available.

TIMING TOLERANCE: ±10% standard, ±5% available.

CURRENT DRAIN: (at 25°C at 28 VDC).
Control Line — 15 ma typical, 25 ma maximum.
Auxiliary — De-energized (after completion of delay period) 25 ma Energized (see Tabulation).

Configuration	2 & 5 Amp	10 Amp
1PDT	100 ma	150 ma
2PDT	150 ma	240 ma

RESPONSE TIME:
Operate — Rated 2 and 5 amp, 10 msec max. 10 amp, 20 msec max.
Recycle — 10 msec (DC); 50 msec (AC).
Reset — 20 msec maximum.

CONTACT RATINGS:

Specified Rating	Amperes at 30 VDC Res	Amperes at 30 VDC Ind	Amperes at 115 V 400 Hz Res	Amperes at 115 V 400 Hz Ind
2 amps	2	1	1	0.3
5 amps	5	1.5	3	1
10 amps	10	5	5	3

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE: −55°C to +85°C or −55°C to +125°C.
VIBRATION: 10-20,000 Hz at 20G except 10 amp rated units 15G.
SHOCK: 50G 11 ±1 millisecond.
INSULATION RESISTANCE: 1000 Megohms minimum at 500 VDC.
DIELECTRIC STRENGTH: 1000V RMS, 60 Hz at Sea Level. All terminals tied together to case, and across open contacts.
SEALING: Hermetic 1.3 inches mercury.
LIFE: 2 and 5 amp rated - 100,000 operations minimum. 10 amp rated - 50,000 operations minimum.

Series Fixed	Series Adjustable	Contact Configuration	Rating	Temperature Range	Available Enclosure

ELECTRICAL SPECIFICATIONS

INPUT VOLTAGE: 18-31 VDC. AC units 105-125 VAC 400 Hz DC units will not be damaged by reverse application of input voltage.
DELAY TIMES: 100 milliseconds to 300 sec. Series 4800 — See Table.
TIMING TOLERANCE: ±10% standard, ±5% available.
OPERATE TIME: 4 amp rated units: 7 ms maximum. 10 amp rated units: 15 ms maximum. Series 4800 — 100 microseconds maximum.
CURRENT DRAIN: Steady state (after time-out). 75 ma maximum at 28 VDC at 25°C. See tabulation for current drain during time-out. Series 4800 — 25 ma maximum + actual load.
RECYCLE TIME: 0.5% maximum of the specified delay time.
CONTACT RATING: See tabulation. Choice of ratings. 10 amps resistive, 5 amps inductive at 28 VDC, 115 VAC, 400 Hz, or 4 amps resistive, 1 amp inductive at 28 VDC. 2 amps resistive, 1 amp inductive at 115 VAC, 400 Hz.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE: −55°C to +125°C or −55°C to +85°C.
VIBRATION: 20 G's 10-2000 Hz.
SHOCK: 50 G's 11 ms. Duration.
SEALING: Hermetic. 1.3 inches mercury.
INSULATION RESISTANCE: 1000 Megohms at 500 VDC.
DIELECTRIC STRENGTH: 1000 V RMS, 60 Hz at Sea Level.
LIFE: 4 amps rated — 100,000 operations min. 10 amp rated — 50,000 operations min. Series 4800 — Over 10^6 operations min.

CONTACT RATING SERIES 4600, 4700

Type	Series	Contacts	Rating
DC	4610-4710	1PDT	10 Amp
	4611-4711	2PDT	10 Amp
	4621-4721	1PDT	4 Amp
	4622-4722	2PDT	4 Amp
	4624-4724	4PDT	4 Amp
AC	4671-4771	1PDT	4 Amp
	4672-4772	2PDT	4 Amp
	4674-4774	4PDT	4 Amp

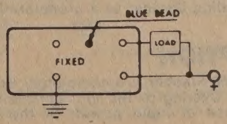
SERIES 4800

OUTPUT: SPST-NO rated 0.5 amp at 25°C derating to 250 ma at 125°C.
FORWARD DROP: 1.0 volt maximum at .5 amps, .3 volts maximum at 150 ma at 25°C. Maximum leakage 10 microamps (in non-conducting state) at 125°C. Inductive loads require diode suppression externally.

TIMING TEMPERATURE RANGE, SERIES 4800

Series	Timing Range	Temperature Range
4801	10 ms. to 50 sec.	−55°C to +85°C
4802	51 sec. to 100 sec.	−55°C to +85°C
4851	10 ms. to 40 sec.	−55°C to +125°C
4852	41 sec. to 80 sec.	−55°C to +125°C

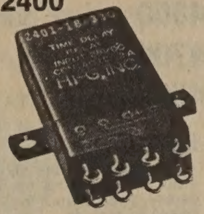
SERIES 4800 SCHEMATIC



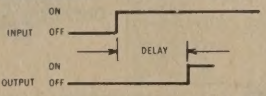
TIME DELAY RELAYS, MINIATURE (HERMETIC)

DELAY-ON-OPERATE

SERIES 2400



TIMING DIAGRAM — Delay-On-Operate



FEATURES

The Series 2400 Time Delay Relay combines a solid-state timing circuit and a Hi-G relay in a package only slightly longer than a standard crystal-case housing. This combination provides the current-carrying capacity and the environmental immunity of Hi-G's electro-mechanical relays with the long life and quick response of electronic circuits.

Delays from 50 milliseconds up to 600 seconds can be specified for this rugged DC timing module. The solid-state circuit has a voltage regulator circuit that permits the use of unregulated power sources.

HOW TO ORDER

The part number for a Hi-G miniature time delay module consists of four elements: the series number, the header style, the mounting style, and the timing code number. The timing code number consists of four digits and gives the time in milliseconds. The first three digits are the significant figures and the last digit is the number of zeroes following the significant figures; thus, 0500 would be 50 milliseconds, 1101 is the code for 1.1 seconds, and 5002 would be 50 seconds. A typical part number for the Hi-G miniature delay module is 2401-1A-1102; this is a time delay module designed to operate in the −55°C to +85°C temperature range, hook terminals, style A mounting, providing a delay of 11 seconds. Specify 2402 for +125°C.

```
2401      1A      1102
  |       ||        └── TIMING CODE

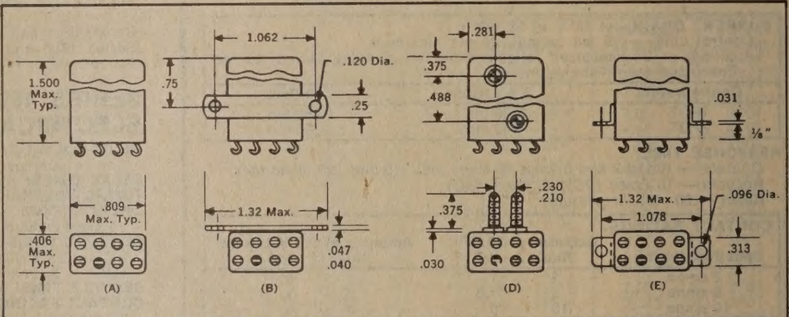
Terminal Diameter .030 inches, all headers.

MOUNTING STYLES



DIMENSIONS ARE IN INCHES Note: Studs shown are 4-40 Thread Size. NOTE: TOLERANCES NOT IMPLIED

ELECTRICAL SPECIFICATIONS

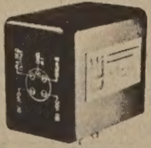
INPUT VOLTAGE: 18 to 31 VDC. Reverse polarity protection provided.
DELAY TIME: 50 milliseconds to 120 seconds Delay-on-make.
TIMING TOLERANCE: ±10% standard, ±5% available.
RESET TIME: 10 milliseconds maximum.
RECYCLE TIME: 10 milliseconds.
RECOVERY TIME: 20 milliseconds.
CONTACT RATING: 2 amps resistive at 30 VDC or 0.125 amp at 115 V, 400 Hz.
TRANSIENT PROTECTION: 80 VDC for 50 milliseconds.
CONTACT ARRANGEMENT: 2-pole, double-throw.
CURRENT DRAIN: 85 ma maximum at 31 VDC (25°C).

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE: 2401 Series −55°C to +85°C. 2402 Series −55°C to +125°C.
VIBRATION: 20 G's, 10 to 2000 Hz.
SHOCK: 50 G's, 11 ±1 milliseconds duration.
INSULATION RESISTANCE: 1000 megohms at 500 VDC, all terminals to case.
DIELECTRIC STRENGTH: 500 V RMS, 60 Hz, terminals to case.
SEALING: Hermetic, 1.3 inches mercury.
LIFE: 50,000 operations minimum.
WEIGHT: 1.2 oz. maximum.

FLASHER

SERIES 2600



APPLICATION

The Hi-G Series 2600 Flasher can be used wherever warning or indicating light, navigation or position lights, panel or control lights must be operated with a maximum of reliability in severe environments. The Series 2600 can also be used to interrupt Tone Generators or other Signaling Devices at a predetermined frequency.

DESCRIPTION

The Series 2600 Flasher is a completely Solid-State Device. Cycling of the unit commences with application of input power, or the unit can be actuated by a control line when standby power is available. Electronic circuitry provides a precise flash rate which is stable over a wide temperature range. Flash cycle available from 30 to 600 per minute.

ELECTRICAL SPECIFICATIONS

INPUT VOLTAGE: 18 to 32 VDC.
OUTPUT: S.P.N.O., 100 ma (Solid-State).
CURRENT DRAIN: 30 ma at 28 VDC.
DUTY CYCLE: 1:10 to 10:1.
STABILITY: ±10% over temperature and voltage input.

ENVIRONMENTAL

OPERATING TEMP: −55°C to +100°C.
VIBRATION: 20 G's, 10 to 2000 Hz.
SHOCK: 50 G's, 11 ±1 MS.
ALTITUDE: 70,000 feet.
LIFE: 10 x 10⁶ cycles.
CASE: Hermetically sealed.

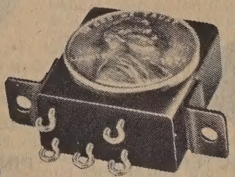
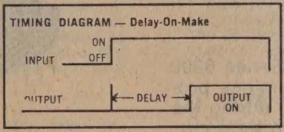
TIMING MODULES, CRYSTAL CAN/DUAL-IN-LINE

DELAY-ON-OPERATE

CRYSTAL CAN SERIES 1800, 1900





DESCRIPTION

The 1800 and 1900 Series are all Solid-State Timers that offer excellent reliability over a useful life well in excess of one million operations. Each unit is hermetically sealed and encapsulated with a standard crystal-can header.

SERIES CHART

Type	Delay Times	Recycle Time (Millisec.)	Output	Max. Forward Leakage
1800	10 ms to 600 sec. Factory Set	10	300 ma @ 25°C	10
1900	10 ms to 240 sec. Adjustable	10	Fwd. drop 2.5V max.	Microamp

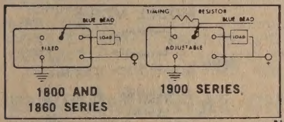
ELECTRICAL SPECIFICATIONS

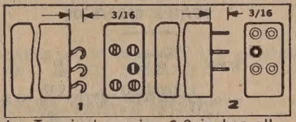
INPUT VOLTAGE: 18 to 31 VDC.
TIMING TOLERANCE: ±10% or 10 milliseconds standard, ±5% available.
RECOVERY TIME: 20 milliseconds maximum.
RECYCLE TIME: 10 milliseconds maximum.
OUTPUT DERATING FOR 125°C: Derated to .100 amp.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE: −55°C to +125°C.
VIBRATION: 20 G's, 10 to 2000 Hz.
SHOCK: 100 G's, 11 ±1 milliseconds duration.
INSULATION RESISTANCE: 1000 megohms at 500 VDC, all terminals to case.
DIELECTRIC STRENGTH: 500 V RMS, 60 Hz, all terminals to case.
SEALING: Hermetic, 1.3 inches mercury.
LIFE: Over 1,000,000 operations.

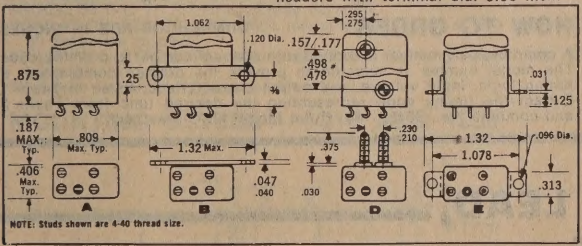
ELECTRICAL DIAGRAMS — HEADER STYLES





MOUNTING STYLES

Note: Terminal spacing 0.2 inches all headers with terminal dia. 0.03 inch.



NOTE: Studs shown are 4-40 thread size.

TIMING MODULE TYPES

Series Type	Type	Timing Range	Temperature Range	Housing Length (Dim. "A")
1801	Fixed	10 ms to 600 sec.	−55°C to +85°C	.875″
1851	Fixed	10 ms to 600 sec.	−55°C to +125°C	.875″
1901	Adjust.*	10 ms to 240 sec.	−55°C to +85°C	.875″
1951	Adjust.*	10 ms to 240 sec.	−55°C to +125°C	.875″

*Refer to Model 1700 for Adjustable Timing Formula.

DETERMINATION OF MODULE PART NUMBER

A typical part number for the Hi-G Solid-State Timing Module is 1801-1A-1002; this is a fixed timing module designed to operate in the −55°C to +85°C temperature range, with hook terminals and a style A mounting, and a delay of 10 seconds. (See Dual-In-Line information, at right, for timing code construction.)

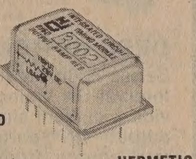
MIL-R-83726/13 SERIES 6001
DUAL-IN-LINE SERIES 6100, 6150 FIXED
6110, 6160 ADJUSTABLE

ENCAPSULATED



HERMETIC

DESCRIPTION

Thick-film hybrid circuitry makes these units very compact and trouble free. Two packaging styles are available. Series 6150 and 6001 are housed in a hermetically sealed metal case. Model 6001 is QPL approved per MIL-R-83726/13. A lower cost, epoxy encapsulated, plastic shell package is provided with Series 6100. All units have a terminal footprint .1″ x .3″ grid, compatible with Dual-In-Line mounting patterns. Model Numbers 6155 and 6105 are TTL compatible. All units have an SCR output device and a life in excess of 1 million operations. Time delays from 50 ms to 600 sec. are standard.

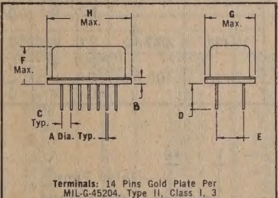
ELECTRICAL CHARACTERISTICS

INPUT VOLTAGE: Table I.
CURRENT DRAIN: 10 ma max. plus load current.
OUTPUT RATING: Encapsulated .25 Amp derated to .1 Amp at +85°C. Hermetic .3 Amp derated to .1 Amp at +125°C. Min. Load required is 10 ma.
FORWARD DROP: 2.5 VDC max. at +25°C.
OUTPUT SWITCH: SPNO Solid-State. Models 6155/6105 TTL Compatible.
TIME RANGES: 0.05 to 600 seconds.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE RANGE:
Encapsulated −55°C to +85°C. Hermetic −55°C to +125°C.
VIBRATION: 20 G's, 10 to 2000 Hz.
SHOCK: 50 G's, 11 ±1 millisecond duration.
LIFE: 1,000,000 cycles minimum.

DIMENSIONS



Terminals: 14 Pins Gold Plate Per MIL-G-45204. Type II, Class I, 3 Terminals For Circuit Connections.
Unit Weight: .4 oz. (12 grms).

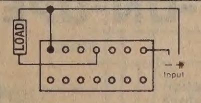
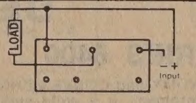
WIRING DIAGRAMS



SERIES 6150/6001



SERIES 6100

DETERMINATION OF MODULE PART NUMBER

Timing Code Determination: The timing code consists of four digits and denotes time in milliseconds. The first three digits are significant figures and the last digit is the number of zeros to follow. Thus 100 milliseconds is coded 1000; 1.1 seconds is 1101 (1100 milliseconds); and 60 seconds is 6002 (60,000 milliseconds).

Example:

6100 — 6002
MODEL NUMBER
TIMING CODE

This number designates a Solid-State Output Timer with 60 seconds (60,000 milliseconds) time delay operating at 28 VDC.

TIMING MODULES, DUAL-IN-LINE PACKAGE

SERIES 6200
DELAY-ON-OPERATE

SERIES 6300
INTERVAL

SERIES MCG-5
LOGIC NORMALIZER

DESCRIPTION

Series 6200 provides a Delay-On-Operate and Series 6300 Interval-On timing function. Standard output versions provide a current sink to the negative load terminal during the output "ON" period. Similarly, "P" versions provide a current source from the positive input terminal during the output "ON" period. Model MCG-5 provides a one shot (Interval) low level sink for 0.5 seconds.

GENERAL SPECIFICATIONS

DELAY ACCURACY: ±10% over temperature and voltage range.
REPEATABILITY: ±2%.
RECYCLE TIME: 100 milliseconds maximum.
DELAY SET POINT: Fixed — No external components required.
Adjustable — External resistor required.
OUTPUT: SPST-NO — Solid-state.
Standard Model — Switches to minus input.
P Characteristic — Switches to plus input.
TEMPERATURE RANGE: 0°C to +71°C.
TERMINALS: Tin Dipped Phosphorous Bronze.
CASE MATERIAL: Diallylphthalate.

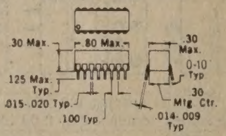
TIMING DESIGNATIONS — TABLE 2

TIME (Seconds)	0.5	1.0	3.0	5.0	10	30	0.30
TIMING CODE	105	11	13	15	110	130	230

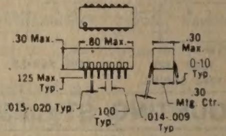
TIMING CODE 230 — Provides a device that may be adjusted using external resistance, over an approximate range of 15-30 milliseconds to 30 seconds. Lower Limit R_T is restricted to 5K minimum. With less resistance, erratic or no time-out may result. 600-700K approximate, will provide a 30 second delay, with intermediate, resistance vs. time, being a linear relationship.

PHYSICAL DIMENSIONS

SERIES 6200/6300



MODEL MCG-5



DIMENSIONS ARE IN INCHES

HOW TO ORDER

A complete part number is formed with a model number and timing code. The model number is selected to provide the desired combination of timing logic, input voltage, and output characteristic, listed in Table 1. Extract the timing code representing the desired time from Table 2, and combine. i.e., 6348P-130. Order Model MCG-5 as such.

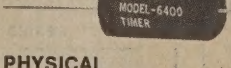
TIMING MODULES, AXIAL LEAD, DELAY-ON-OPERATE

SERIES 6400

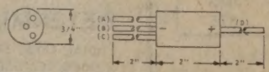
ECONOMY and CONVENIENCE of installation are foremost in a solid-state, two and four lead, cylindrical cased timer, providing a DELAY-ON-OPERATE control function. Fixed and adjustable models.

FEATURES

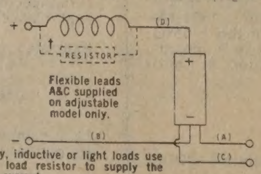
INPUT VOLTAGES: 6 VDC, 12 VDC, 24 VDC, and 48 VDC.
FIXED DELAY TIMES: 1.0, 5.0, 10, 30, and 60 seconds.
ADJUSTABLE MODELS: .05 seconds to max. specified delay which is 90 seconds.
SERIES: Connected with load.
ACCURACY: ±10% (over temperature range).
REPEATABILITY: ±2%.
OUTPUT RATING (Inductive): 2.0 amps at the rated input voltage.
PROTECTION: Reverse polarity.
OPERATING TEMP. RANGE: 32°F to +125°F.



PHYSICAL



WIRING DIAGRAM



Flexible leads A&C supplied on adjustable model only.

†For relay, inductive or light loads use parallel load resistor to supply the holding current.

HOW TO ORDER

Form a part number by the following method, using code numbers shown in the tabulation below.

64XX — XX — XX X

BASIC NUMBER
A* = Adjustable

Input Voltage (VDC)	Output Rating (Amp)	Physical Configuration	Delay Time (Sec.)
6 = 06 12 = 12 24 = 24 48 = 48	D = 2.0	A = Wire Leads 18 AWG	1 = 1.0 5 = 5.0 10 = 10 30 = 30 60 = 60

*Approximately 1.5 meg for max. delay.

EXAMPLE PART NUMBER: 6424-DA-5 = A 24 VDC timer with a 5 second delay time.

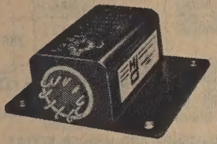
SENSORS/MONITORS/DETECTORS: VOLTAGE, PHASE, FREQUENCY

AC AND DC VOLTAGE 1300 SERIES



FEATURES

DC SENSOR — SERIES 1310

The Hi-G 1310 Series DC Voltage Sensor is essentially a voltage monitoring device operating a snap-action transistor circuit with low drift and inherent temperature compensation. This device will either open or close a circuit when a predetermined voltage is present at the input. By using a Hi-G electro-mechanical relay as the output of the voltage sensor, a positive switching action can be achieved with very close difference between pull-in and drop-out voltages.

AC SENSOR — SERIES 1350

The Hi-G 1350 Series AC Voltage Sensor energizes a relay when the monitored power line voltage reaches a predetermined level. This rugged unit with reliable solid state design, provides precise, repeatable operation over a wide temperature range.

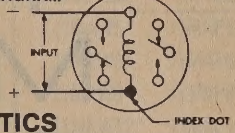
The input voltage is fed into a temperature compensated comparator circuit. When the input reaches the pre-set level, transistor amplifiers switch the output relay. This output may control any external devices, process, or warning system to protect expensive equipment.

The units for both series are potted and hermetically sealed and are designed to meet the environmental requirements of airborne applications. The following are available for both the 1310 and 1350:

STANDARD OPTIONS

1. Solid-State Output.
2. Two Stage Sensing (Voltage Band).
3. Up to 10 Amp Relay Output.
4. 3 Phase AC Version Available.
5. Controlled Drop-out Differential.
6. Operate with Auxiliary Control Voltage.

ELECTRICAL DIAGRAM



PART TYPE CHARACTERISTICS

Specification	Part Number	
	1310	1350
Pull-in Voltage	5 to 150 VDC	5 to 440 VAC
Smallest Increment	0.1 Volt	50, 60 or 400 Hz
Drop-out Voltage (Rel. to Pull-in)	−0, +0.5 Volts	1.0 Volt +0, −3.0 Volts
Current Drain @ 25°C	15 ma Max.	100 ma Max.

ELECTRICAL SPECIFICATIONS

ACCURACY: ±2½% of set point over temperature range.
MAXIMUM ALLOWABLE APPLIED VOLTAGE: 150% of specified pull-in voltage.
AUXILIARY VOTAGE: None required.
OPERATE AND RELEASE TIMES: 50 milliseconds maximum over the temperature range.
LIFE: 100,000 operations minimum.
CONTACT ARRANGEMENTS: 2PDT.
CONTACT RATING: 2 amperes resistive at 30 volts DC; 0.3 amperes resistive at 115 volts RMS, 400 Hz.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE: −55°C to +125°C.
VIBRATION: 20 G's, 10 to 2000 Hz.
SHOCK: 50 G's, 11 ±1 milliseconds duration.
INSULATION RESISTANCE: 1000 megohms minimum at 500 volts DC, all terminals to case.
DIELECTRIC STRENGTH: 1000 volts RMS, 60 Hz at sea level, all terminals to case.
SEALING: Hermetic, 1.3 inches of mercury.

PHASE SENSOR 1400 SERIES

TWO STANDARD TYPES

P TYPE FOR STATIC LOAD

With line voltages and frequency within operating limits, P-Type units will energize only when output phase are in sequence A - B - C. They will de-energize only when power is removed. The P-Type unit is best suited to applications where static loads are used and where regenerated voltage will not be present if a phase opens.

Q TYPE FOR MOTOR LOADS

Q-Type units perform the same function as the P-Type since they will energize only when input phases are in sequence A - B - C. In addition, the units will de-energize when any phase is disconnected or grounded provided the voltage input to the unit is below 50% of the nominal phase-to-phase voltage input. Q-Type units are suitable for motor loads where a regenerated voltage is produced.

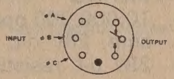
NO NEUTRAL CONNECTION

Neither P- or Q-Type units require connection to neutral leg.
For high-current applications, phase sensors are used with slave relays having heavy duty contact ratings.
For applications having special requirements as to voltage, frequency, contact arrangements, and ratings, consult the factory.

ENVIRONMENTAL CHARACTERISTICS

TEMPERATURE: −55°C to +85°C.
VIBRATION: 200 G's, 10 to 2000 Hz.
SHOCK: 50 G's, 11 ±1 millisecond.
INSULATION RESISTANCE: 1000 megohms minimum at 500 volts DC, all terminals to case.
DIELECTRIC STRENGTH: 1000 volts RMS, 60 Hz, at sea level, all terminals to case.

ELECTRICAL SPECIFICATIONS



OPERATE TIME: 50 milliseconds maximum.
RELEASE TIME: 100 milliseconds maximum.
CONTACTS: 1PDT.
CONTACT RATING: 2 amperes resistive at 30 volts DC. 0.5 ampere inductive at 30 volts DC. 0.25 ampere resistive or inductive at 115 volts, 60 or 400 Hz.

HI G TO5 HYBRID RELAYS

GENERAL SPECIFICATIONS

RATING: 10,000,000 operations at low level. 1,000,000 operations at 0.5 amp, 28V d-c resistive load. 100,000 operations at 1.0 amp, 28V d-c resistive load.

CONTACT RESISTANCE: 0.1 ohm maximum before life (measured ⅛″ from header). 0.2 ohm maximum after life at maximum rated current (measured ⅛″ from header).

CONTACT BOUNCE: 1.5 milliseconds maximum.

OVERLOAD: 2 amps at 28V d-c for 100 operations minimum.

INSULATION RESISTANCE: 10,000 megohms minimum between mutually insulated terminals.

ENCLOSURE: Hermetically sealed. All welded.

TEMPERATURE RANGE: −65°C to +125°C.

VIBRATION: .06″ DA or 30G, 10-3000 cps.

SHOCK: 80G's for 11 milliseconds.

DIODE CHARACTERISTICS 25°C: PIV 100V min.

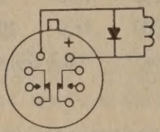
MAXIMUM COIL TRANSIENT:
Transistor Coil Drive: 1.0V Suppression: 2.0V

TRANSISTOR CHARACTERISTICS 25°C:
Emitter-Base Voltage: 6V max.
Collector-Base Breakdown Voltage: 80V min. @ 100 μa.

SUPPRESSION

Each of Hi-G's relays are available with an integrated coil suppression diode to provide inhibitation of the inductive arc voltage produced by the coil.

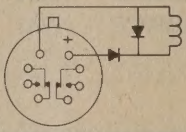
TYPE "D"



SUPPRESSION/STEERING

The addition of a series diode to the suppressed coil circuit provides the added advantage of polarity reversal protection and the elimination of diode damage.

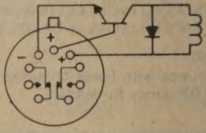
TYPE "DD"



TRANSISTOR DRIVEN

The addition of an internal transistor coil drive provides increased operating sensitivity, high isolation while retaining the high level switching capability of the contacts.

TYPE "T"



ORDERING INFORMATION

MAW D — 26

Series — MAW
D — Diode Suppression
DD — Supression/Steering
T — Transistor Driven
Coil Voltage — 26

MILITARY DESIGNATION

39016/X-XXX*

Basic Specification — 39016
Type — X
Voltage & Pin Configuration — XXX
* Failure Rate "L" or "M"

Qualified

All Hi-G Co., Inc. Hybrid TO-5 Relays are produced in accordance with the applicable Military specification noted below. The Hi-G part number can be derived by using the how to order information and this number can then be converted to the appropriate Military designation by reference pages 3546 and 3547 in this Volume.

CRYSTAL CAN RELAYS

RADIO FREQUENCY RELAYS

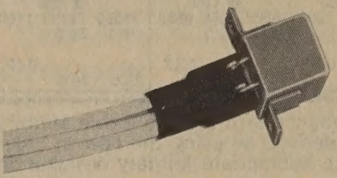
RF contacts are terminated with RG-196/U Teflon insulated coaxial cable, 6″ in length. Other lengths, types of cable, or coaxial connector terminations available on special order. These relays meet or exceed the applicable portions of MIL-R-5757 and MIL-S-3928.

RADIO FREQUENCY CHARACTERISTICS

Frequency Range	0 - 500 MHz*
Voltage Standing Wave Ratio (VSWR)	<1.1:1 typical
Insertion Loss	0.16db typical
Characteristic Impedance	50 ohms†
Crosstalk	−50db typical

** Usable to 1000 MHz with reduced RF characteristics*
† Other impedances available on special order

DICE CUBE RADIO FREQUENCY RELAY — SERIES RFC PRODUCT BULLETIN 159

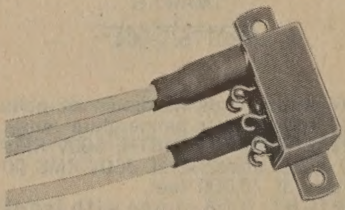


Operate Power 150 mW

Relay Type	RFC
Size	0.5-inch cube
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.3 ounce (without terminations)

Housing details on p. 3548 and 3549.

HALF SIZE CRYSTAL-CAN RADIO FREQUENCY RELAY— SERIES RFK PRODUCT BULLETIN 156

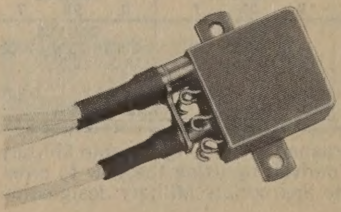


Operate Power 250 mW

Relay Type	RFK
Size	.4 x .8 x .4 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.37 ounce (without terminations)

NOTE: Electrical characteristics & housing same as series K p. 3543.
Housing details on p. 3548 and 3549.

CRYSTAL-CAN RADIO FREQUENCY RELAY — SERIES RFB PRODUCT BULLETIN 157

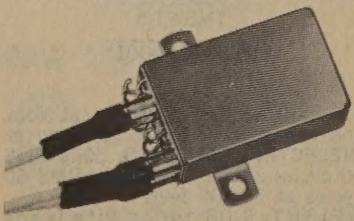


Operate Power 250 mW

Relay Type	RFB
Size	.875 x .800 x .400 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	0.95 ounce (without terminations)

NOTE: Electrical characteristics & housing same as series B p. 3544.
Housing details on p. 3548 and 3549.

HIGH SENSITIVITY RADIO FREQUENCY RELAY — SERIES RFBC PRODUCT BULLETIN 158



Operate Power 40 mW

Relay Type	RFBC
Size	1.275 x .800 x .400 inch
Contact Rating	200 watts RF cold switching 75 watts RF hot switching
Maximum Weight	1.0 ounce (without terminations)

NOTE: Electrical characteristics & housing same as series BC p. 3544.
Housing details on p. 3548 and 3549.

ENVIRONMENTAL CHARACTERISTICS FOR STANDARD CRYSTAL CAN SERIES

Life: 100,000 operations at 125°C and rated load.
Temperature: −65°C to +125°C, operating.
Vibration: 10 to 2000 Hz, 20G min.
Shock: 100 G
Sealing: Hermetic, to 80,000′

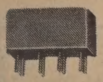
Insulation Resistance: 1000 megohms min., except coil-to-case at high temperature 500 megohms min.

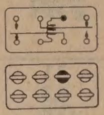
Dielectric Strength: Contacts-to-case: 1000 volts rms, 60 Hz, mutually insulated terminals: 500 volts rms standard.

CRYSTAL CAN RELAYS

.150 GRID RELAY — SERIES G Product Bulletin 95

Qualified





CONTACT RATING

- 1 ampere resistive at 30 volts DC max.
- 0.125 amperes resistive at 115 volts RMS, 400 Hz, case grounded.
- Low level 0 to 0.1 ampere at 50 mV DC or AC.
- 2 ampere resistive at 30 volts DC max. (50,000 operations min.).

VIBRATION: 0.5″ DA from 5-34 Hz, 30G from 34-3000 Hz, 10μs max. contact opening.

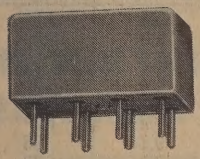
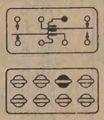
HALF-SIZE CRYSTAL CAN RELAY — SERIES 2K Product Bulletin 102

Qualified

CONTACT RATING

2 amperes resistive at 30 volts DC, 1 ampere resistive at 115 volts RMS, 400 Hz, case grounded and dry circuit.





ALL WELDED CONSTRUCTION

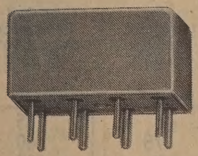
Voltage Code	Nominal DC Coil Voltage	Max. Continuous Coil Voltage	Max. Pull-in Voltage @ 25°C	Min. Drop-out Voltage @ 25°C	DC Coil Resistance Ohms ±10% @ 25°C
106	6	7.2	3.25	.35	40
112	12	14.4	6.5	.75	150
126	26.5	32	13.5	1.5	675

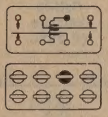
Housing details on p. 3548 and 3549.

SENSITIVE HALF-SIZE 2 AMP RELAY — SERIES KA Product Bulletin 110

CONTACT RATING

- Low level — dry circuit.
- 2.0 ampere resistive at 30 volts DC
- 1.0 ampere resistive, 115 volts RMS, 400 Hz.
- 0.3 ampere resistive at 115 volts RMS, 60 Hz.
- 0.75 ampere inductive at 30 volts DC





VIBRATION: 20G, 10-2000 Hz.

Voltage Code	Nominal DC Coil Voltage	Max. Continuous Coil Voltage	Max. Pull-in Voltage @ 25°C	Min. Drop-out Voltage @ 25°C	Effective DC Coil Resistance ±10% @ 25°C

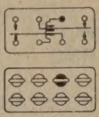
CRYSTAL CAN RELAYS

2 AMP CRYSTAL CAN RELAY — SERIES 2B Product Bulletin 120

Qualified



CONTACT RATING

2 amperes resistive at 30 volts DC, 1 ampere resistive at 115 volts RMS, 400 Hz, case grounded and dry circuit.

NOTE: BR types for operation at 60 to 400 Hz with specifications shown. Units may be used at higher frequencies, but individual values of voltage may change.

2-pole units only available as standard catalog item.

Voltage Code	Nominal DC Coil Voltage	Max. Continuous Coil Voltage	Max. Pull-in Voltage @ 25°C	Min. Drop-out Voltage @ 25°C	DC Coil Resistance Ohms ±10% @ 25°C

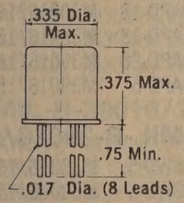
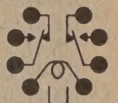
CSW SERIES DPDT





Relay Part No.	CSW-5	CSW-6	CSW-9	CSW-12	CSW-18	CSW-26
Coil Nominal	5VDC	6VDC	9VDC	12VDC	18VDC	26.5VDC
Coil Resistance ±10%	100	200	400	850	1600	3300
Pull-in (max.) VDC	3.0	4.3	6.0	8.5	12.8	17.0

The Hi-G CA & CS Series relays are manufactured to the same exacting standards as its Military counterpart. Each relay boasts an all welded construction to afford hermeticity of seal and insurance of chamber cleanliness. This low price TO5 type relay will comply to all of your switching requirements between dry circuit and 1.0 ampere.

GENERAL SPECIFICATIONS

OPERATE POWER: CA Series, 185mw; CS Series, 90mw.

OPERATE TIME: CA, 4.0ms; CS, 6.0ms @ nominal volt.

RELEASE TIME: CA, 3.0ms; CS, 3.0ms.

DIELECTRIC STRENGTH: 350VRMS 60 Hz.

INSULATION RESISTANCE: 1,000 Megohms min.

VIBRATION: .06" DA 10-55 Hz, 10G to 500 Hz.

SHOCK: 30G Mil-Std 202 Method 213.

TEMPERATURE −55° to +71°C.

LIFE: 10,000,000 ops, mechanical,
1,000,000 ops, 0.5A 28VDC
100,000 ops, 1.0A 28VDC

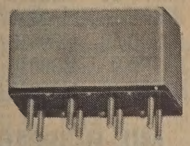
WEIGHT: CA-0.08 oz., CS-0.15 oz.

ORDERING INFORMATION

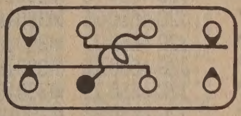
CAW — 26
Series — Coil Voltage

Also available with diode suppressed coil or Transistor Driver. Add D or T to Series.

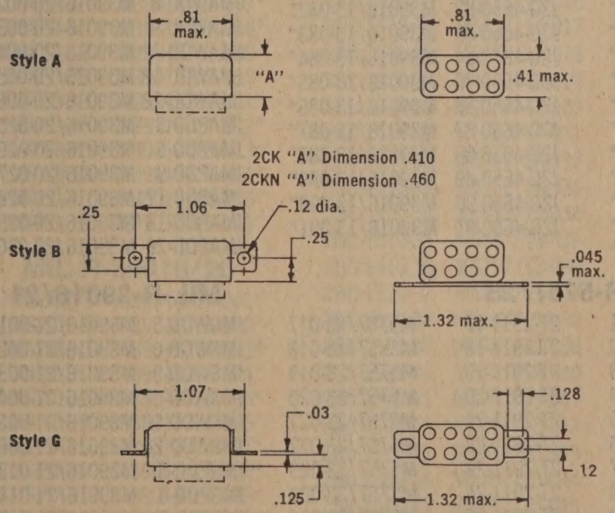
INDUSTRIAL 2 AMP AND 5 AMP - 2CK AND 2CKN SERIES



2 Form C

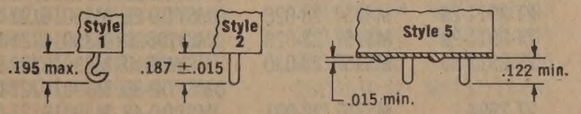


Enclosure Styles



2CK "A" Dimension .410
2CKN "A" Dimension .460

Terminal Styles



GENERAL SPECIFICATIONS

OPERATE POWER: 2CK 350mw max.
2CKN 725mw max.

OPERATE TIME: 2CK 4.0ms max.
2CKN 5.0ms max.

RELEASE TIME: 2CK 2.0ms max.
2CKN 3.0ms max.

TEMPERATURE: −55°C to +85°C

DIELECTRIC STRENGTH: 500VRMS all points

INSULATION RESISTANCE: 1000 megohms min.

VIBRATION: 10G 10-500 Hz

SHOCK: 50G 11ms

What can I use to keep all the manufacturers' product data I receive in order?
What system makes filing or retrieving manufacturers' catalogs fast and easy?
Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. • 645 Stewart Ave., Garden City, N.Y. 11530

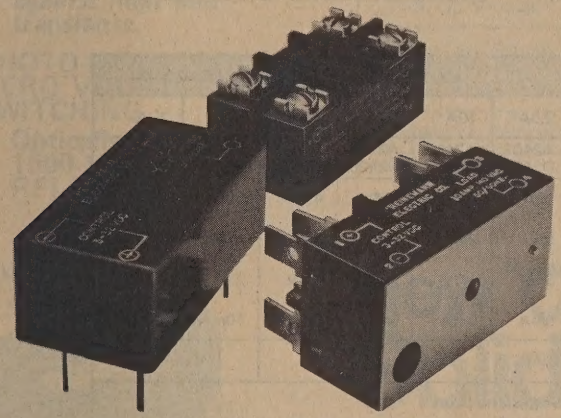
HEiNEMANN

FAIL-SAFE SOLID-STATE RELAYS FOR RELIABLE, LONG-LIFE SWITCHING of machine controls, computer controls, traffic controls, heating controls, process controls, lamps, office equipment, transformers

At Heinemann, we have gone a step beyond the many fine solid-state relays available today. Besides being CMOS- and TTL-compatible, our relays are *fail-safe.*

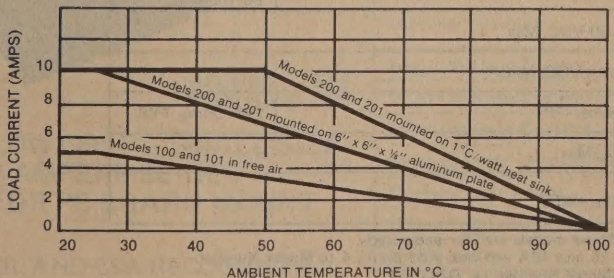
A unique combination of snubber network, fusible-link protector, and an overdesigned triac in each Heinemann relay prevents catastrophic systems failures common in other solid-state relay installations.

New and completely encapsulated for mounting in any position even in the worst conditions of moisture and vibration, Heinemann relays represent the industry's highest attainment in AC switching technology for loads up to 10 amperes. Two types, three mounting styles: Zero-voltage switching available for high rfi and emr resistance; non-zero-voltage switching for applications requiring a measurable level of load energy for switching. PC-mount, quick-on connectors, or screw terminals. 5A or 10A maximum load current, with DC control input voltage from 3 to 32V.



Derate for high ambient conditions according to Fig. 1. Complete information in new Bulletin Q-5401.

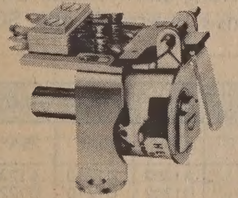
FIGURE 1—MAX. LOAD CURRENT VS. AMBIENT TEMPERATURE



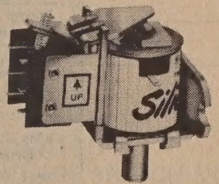
SILIC-O-NETIC TIME-DELAY RELAYS CAN CARRY CONTINUOUS LOADS TO 5A, ELIMINATE LOAD RELAY

You can often eliminate the need for two relays in timing applications. Heinemann Silic-O-Netic® time-delay relays can do both the timing and the load switching, because they have a continuous-duty coil and gold-plated 5-amp SPDT or DPDT contacts. If your application, like most time-delay relay applications, can manage with a timing accuracy of ±50% of the delay period, one of the three Heinemann Silic-O-Netic relays would be an economical and reliable choice for you.

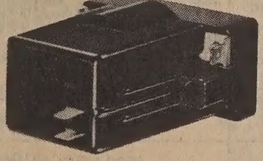
Available in a range of sixteen time delays from ¼ sec to 120 sec. Complete information in Bulletin 5006.



Type A—open frame, greatest economy for appliances and other mass-produced equipment.



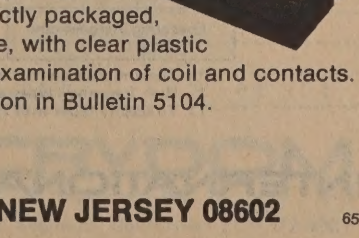
Type B—open frame with enclosed snap-action contacts for protection against contamination.



Type C—enclosed in durable phenolic case; quick-on terminals for both coil and contact circuits.

HEINEMANN OVERLOAD RELAYS FOR CLOSE-TOLERANCE MOTOR PROTECTION

The Type PJ overload relay acts fast, within close tolerances, to protect modern motors which are designed with running current close to locked-rotor current. A choice of three delay curves from slow trip (3 to 9 sec at 450% rated load) to fast trip (0.6 to 2.5 sec at 150% rated load). UL listed for AC motor running current to 65A at voltages up to 600VAC. Compactly packaged, stackable, dust-free, with clear plastic cover to facilitate examination of coil and contacts. Complete information in Bulletin 5104.



We keep you out of trouble.

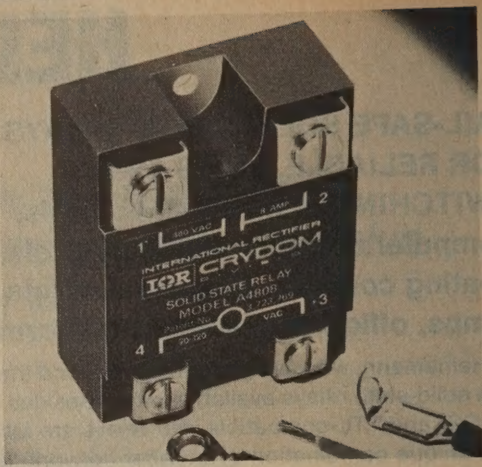
SCR Output Solid-State Relays



Whenever you want one-source savings on solid-state power relays, come to Crydom -- the originator (U.S. patent no. 3,723,769) of what has become the industry standard. We offer the broadest line available, 20 models in all, all in the same field-proven, functional package. They're UL recognized and CSA certified too. Among their outstanding features are • Complete Photo-isolation • Zero-Voltage Switching • 4-Way Terminals Silent Operation • Computer Compatible Inputs • No Inductive Load or Lamp Derating • Ultra-long and Reliable Life under High Shock/Vibration conditions • Inverse Parallel SCR Output.

YOUR WORLD OF RELAY RESOURCES IS AT ITT COMPONENTS GROUP

At ITT Components Group we are proud of our worldwide resources. 2,000 people . . . one million square feet of manufacturing space . . . throughout seven countries. We manufacture and market the most modern and most reliable relays and they are available to you from one location.

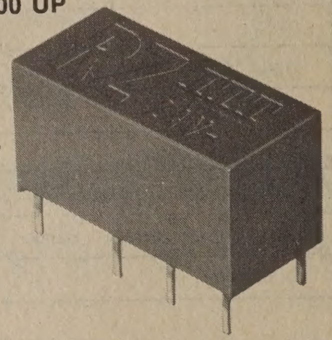
The ITT name — known the globe over — sets our very high standards. Our R&D facilities provide the latest in materials and switching techniques assuring the highest reliability at the most economical cost.

On this page and the five following. we present some highlights from our relay line. First two pages: specifications of our subminiature PCB relays. Next two pages: printed-circuit, low-profile PZ relays designed especially for high speed switching applications in logic, control, and communications equipment. Last two pages: Type 24/25 cradle relays which are available in single, bifurcated, and heavy duty versions.

1A DUAL-IN-LINE RELAYS

$1.50
100 UP

- **2 Form C Crossbar Contacts**
- **Dual-In-Line Configuration**
- **Low Profile, Printed Circuit or DIP Socket**
- **Molded Construction Ideal for Flow-Solder**
- **Automated Assembly and Test**



RZ

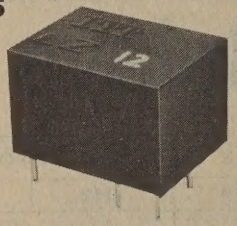
ITT Components Group is a powerhouse of relay resources. And here is our smallest powerhouse — the RZ relay. This subminiature dual-in-line printed circuit board relay, a significant advancement in relay state-of-the-art, has a unique symmetrical layout in a DIP package and a 2 Form C (DPDT) design with single silver cross--bar contacts which provides switching characteristics of 1A, 30W, or 50VA. Size? The RZ stands only 0.433 inches above the board.

That's a lot of power in a little package.

3A SUB-MINIATURE PRINTED CIRCUIT RELAYS

LZ

$1.05
100 UP



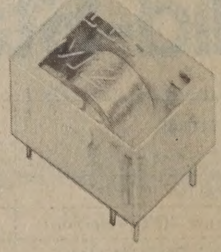
- **Low Cost, Low Profile**
- **Vibration and Shock Resistant**
- **Printed Circuit Mounting (0.1 in.)**
- **Sub-miniature Size**
- **Designed to Satisfy UL and CSA Requirements**
- **Dust-Free Enclosure**
- **Low Level to 3A**

The LZ miniature printed circuit relays are specifically designed to withstand high shock and vibration conditions. These 3A, 1 Form C relays, have been designed for mounting on standard printed circuit boards and are sealed to help prevent soldering and cleaning problems.

1A SUB-MINIATURE PRINTED CIRCUIT RELAYS

MZ

$1.00
100 UP



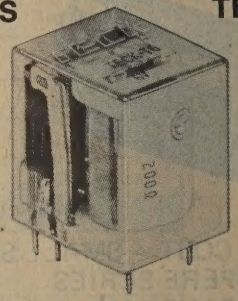
- **1 Form C General Purpose**
- **Dual-In-Line Configuration**
- **Gold Contacts for Low-Level Loads GS Contacts for Normal Loads**
- **Improved Shock and Vibration Characteristics**
- **Miniature Size — 0.4″ Height**
- **Dust-Free Enclosure**
- **Economical/Low Cost**

The MZ series of sub-miniature dual-in-line relays are ideal for current cost conscious engineers for design of low profile printed circuit equipment requiring speed, reliability and repeatability. They are available with 1 Form C (SPDT) crossbar contacts either low level or standard 1A (for 2 Form C see TECK specifications). Efficient design for shock and vibration applications. They are provided with a dust-free enclosure.

0.5A MINIATURE PRINTED CIRCUIT RELAYS

TECK

$1.70
100 UP



- **Miniature 2 Form C**
- **Rugged Construction**
- **High Reliability**
- **Low Cost**
- **Dust-Free Enclosure**

The TECK series printed circuit relays are ideally suited for applications where space is at a premium. Their small size, reliability, ruggedness and low cost make them a unique series of relays. They are available in a variety of contact configurations with SPDT and DPDT bifurcated contacts standard, and all types come standard with a dust-free enclosure.

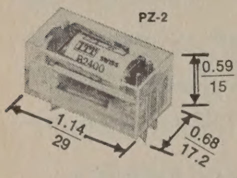
PRINTED CIRCUIT MINIATURE RELAYS

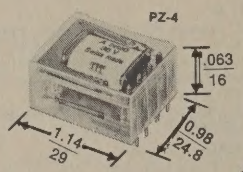
PZ-2 PZ-4 PZ-6

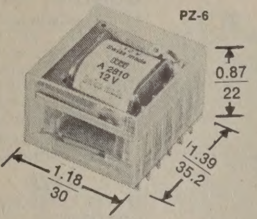
These low profile relays were designed especially for printed circuit applications utilizing standard pulse communication techniques. They are also available in latching versions as well as in subminiature packages. Contacts are gold and silver alloys to insure specified contact resistance over full life. Totally automated production eliminates human error and guarantees all parameters. Their polycarbonate case is designed to be used with or without top cover. There are more than 70 standard types. All are UL Recognized (File E57102).

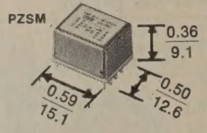
PZSM

- 15 Years Proven Telecommunications Experience
- Switch 1A in 1.7 Cubic Centimeter
- Subminiature Size — Height 0.36″
- High Reliability
- 2 Form C in 0.1 Cubic Inch
- Operates From IC Logic and Standard DC Voltages
- 0.1 Inch Grid Spacing
- Printed Circuit Board Application
- Less Than 0.3in² on PC Board
- Standard Flow-Solder Techniques









ALL DIMENSIONS IN INCHES / MM

SOLID STATE RELAYS

- 70 Models in 12 Package Styles
- 1A to 40A in AC and DC Versions
- All Internal Triacs and SCRs Are Triple Tested and Selected
- Smallest Packages Consistent With Thermal Considerations

It takes an EMR expert, like ITT Components Group, to translate your switching and isolation needs into solid state technology. We offer built-in snubbers, unique heat dissipation systems for high surge capability, and true zero cross-over circuitry. You can choose from photo, transistor and reed coupling. And you can build your own part number from the chart below and order a solid state relay customized to your own requirements. Or choose a standard ITT solid state relay from any of the types listed in the Basic Cross Reference chart. Either way you get the reliability and long life which makes our SSRs an excellent alternative to electromechanical relays.

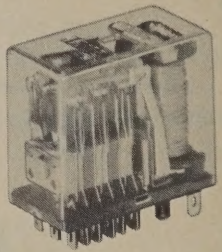
MINIATURE RELAYS

24/25/26

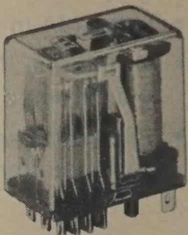
- **One Piece Core and Yoke** giving improved magnetic efficiency and stability
- **One Piece Bobbin and Terminal** gives rigid coil terminations
- **Polycarbonate Insulation** — negligible moisture absorption ensuring stability of spring-set adjustment
- **Underwriters Laboratories Recognized (#E57102)**

Type 24

Type 26



Type 25



ITT Type 24/25/26 miniature relays are fully interchangeable in form fit and function with all well known cradle types. 2, 4 & 6 Form C is standard; 2, 4 or 6 Form A or B is available on request. A variety of contact materials is available in single and twin light duty. Heavy duty single contacts are available; these are listed in the Load and Life Data table. Several options are available to meet different load requirements. Single silver contacts are excellent for loads up to 2A. Twin (bifurcated) contacts should be used for carrying low loads, 100mA and lower (dry circuits). Heavy duty single cadminum oxide contacts give 5A ratings. Twin contacts are available in gold alloy or fine silver.

Load and Life Data

	Single and Bifurcated Contact Materials			Heavy Duty Contact Materials

vacuum relays

ITT Jennings manufactures Vacuum and Gas Relays to exacting standards for use in transferring high voltage circuits. They are available in voltage ranges up to 30 KVAC, with up to 75 A. current ratings, and with operating frequencies through the VHF band. These relays are widely used in airborne, mobile and marine communications where their characteristics are particularly desirable. They have high operating speeds, withstand high voltages and carry heavy currents with high reliability ... without developing high contact resistance or generating electrical noise. The majority of applications for these relays includes the switching of antennas, frequency bands, transmit/receive modes, power circuits and elements in pulse forming networks.

Engineering information on the use of vacuum relays for DC, AC, and RF switching as well as special capacitive circuits in included in this 16-page catalog. Specifications on various relays are organized for ease in selecting the best unit for your applications.

DIVISION OF INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION

vacuum coaxial relays

ITT Jennings manufactures a broad line of coaxial relays for use where circuit currents must be contained completely within a coax system. Vacuum coaxial relays have high power handling capabilities at frequencies up to 1.7 GHz. Inert gas filled switches offer advantages where power levels are low and maximum system flexibility demands modular, stackable configurations.

These relays and switches have characteristics that are well suited to airborne, marine and mobile communication systems, as well as fixed installations. These characteristics include: ● Low insertion loss and VSWR ● High RF power capability ● High isolation ● Fast operation ● Low, stable contact resistance ● No noise generation or IM distortion ● Extreme high reliability combined with ruggedness for high altitude or heavy vibration environments ● Small size and lightweight for their power handling capacity ● Wide band-pass characteristics. Typical applications for these units might include multiple antenna-transmit switching systems such as high speed switching from omnidirectional to directional antennas, transmit-receive switching, and where tunable elements are to be switched in transmitter and receivers. Other applications include crossbar matrices and switching trees, CCTV, CATV, and microwave telemetry and data acquisition links, as well as general coaxial instrumentation.

This 16-page catalog describes in detail the complete line of vacuum coaxial relays, including crossover types designed for use in HF and VHF matrix crossbar systems. Also listed are a variety of fittings for assembling crossbar networks using 1-5/8, 3-1/8 and 6-1/8" lines. Typical crossbar switching matrices are described.

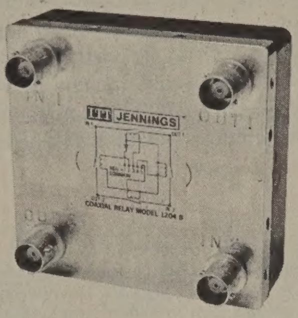
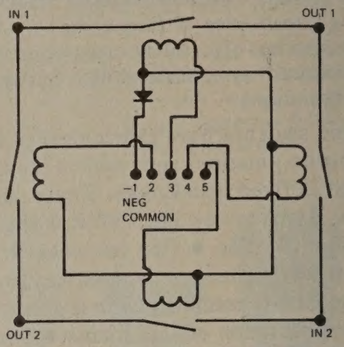
DIVISION OF INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION

2 x 2 high isolation coaxial switches

2RC1204 SERIES





APPLICATIONS

- Switch wideband signals, DC-300 MHz.
- Electrically controlled switching in circuits requiring high isolation (such as IF video circuits) or very high isolation (such as RF video circuits.)
- CATV and CCTV.
- Computer controlled measuring systems.
- Non-duplication switching in RF head-end networks.
- Communications Systems.

FEATURES

- Minimum open circuit leakage over entire frequency range.
- Broadband frequency response — DC to 300 MHz range.
- Universal mounting design for panels, railings or brackets.
- Control connector adaptable to flexible ribbon for stripline or PC board interface.
- Rugged two-part housing — aluminum die casting and molded polycarbonate cover.
- Silver-plated signal paths shielded for maximum EMI protection.
- Reed switch elements hermetically sealed in nitrogen atmosphere.
- Rhodium-plated contacts prevent "sticking" due to feedback currents or dry circuit operation.
- DC coils are diode protected against effects of transients or use of wrong polarity.
- DC coils can be independently controlled or sequenced in pairs.

Specifications	Model 1204	
Bandwidth	DC — 300 MHz	
VSWR	Model "BH"	Model "B"
(max)	1.5	1.5
(typ)	1.25	1.25
Insertion Loss (typ)	1.0 dB	0.8 dB
Isolation (min)	−70 dB	−45 dB
Impedance	75 ohms	
RF Power, CW (nom)	3 Watts	
RF Peak Voltage	250 V	

Specifications	Model 1204
Switching Time (max)	1 millisecond
Control Viltage (nom)	12-28 VDC
Connector Type	BNC (Quick Disconnect)
Mounting	Any Position
Life	20×10^6
Temperature Range	
Operating	−55 to +75°C (−67 to +167°F)
Storage	−65 to +85°C (−85 to +185°F)

OPTIONS AVAILABLE

Control Voltage
6 or 48 VDC

Configuration	Isolation	Model Number
2 x 2	High (−45 dB)	1204B
2 x 2	Very High (−70 dB)	1204BH

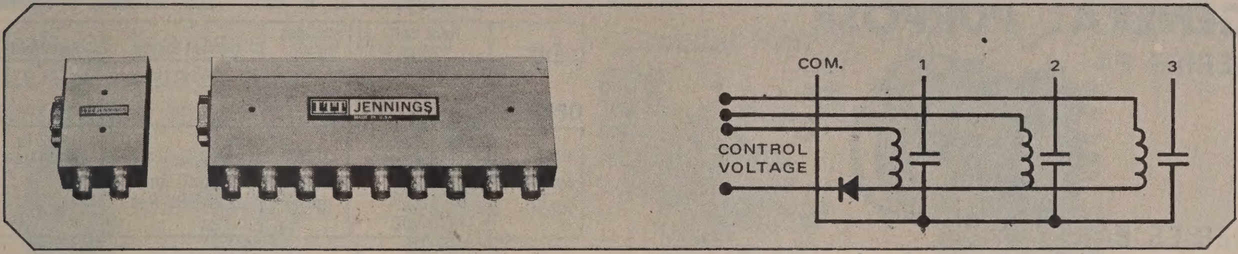
DIVISION OF INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION

coaxial switch modules

RC1100 SERIES



APPLICATIONS

- Electrically controlled switching of wideband signals, DC—300 MHz.
- Design of complex switching circuits such as SP42T, 9P3T and other unusual switching trees.
- CATV and CCTV distribution switching.
- Telemetry and data handling networks.
- Satellite communications.
- Microwave trunks (base band and IFF frequency).
- Automatic switching of computer controlled measuring systems.
- Network analyzing digital pulse information.

FEATURES

- One to eight throws.
- Sealed RF contacts for long life, stable contact resistance.
- Designed for over 1800 switchings/day for 30 years.
- Special contact material prevents "sticking" due to feedback currents or dry circuit operation.
- DC coils are diode protected against effects of transient voltages or use of wrong polarity.
- All-aluminum flatpack housing is easily stacked to provide multi-pole, multi-throw operation.
- Low RF leakage input and output assured up to 300 MHz.

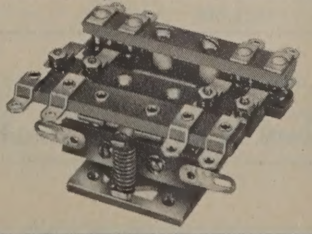
CUSTOM RELAYS



In addition to the relays listed on this page many other standard relays in each relay category are available. For your special relay applications, KURMAN recognizes your needs. To this end we have oriented our efforts toward serving your custom requirements. Our technical staff is eager to assist you. Service reliability and 50 YEARS of experience will attest to why knowledgeable people use KURMAN RELAYS.

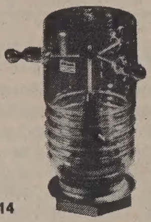
Send for more information, BETTER YET CALL US.

Let Kilovac turn you on!

Or off, as the case may be, KILOVAC relays offer the following outstanding features:

HC-1

KM-14



H-25

- Ratings to over 100 KV
- Long Life — one million plus operations
- Light Weight — as little as 1 oz.
- Non-oxidizing contacts
- Fast-Operate Time — 10 ms typical
- High Dielectric, smaller size per voltage/current rating

1. RELIABILITY

In the right application, with the KILOVAC relay selected to do a specific job, millions of cycles of mechanical life are possible with little or no degradation in performance specifications.

2. VACUUM IS THE OPTIMUM DIELECTRIC

It affords isolation of approximately 2000 volts per .001 inch of contact gap. (A vacuum relay is a high voltage insulator and a low loss conductor). When breaking a load, vaporized metal from the contacts creates a high pressure area which rapidly expands the ionized metal vapor into the low pressure area surrounding the contacts. The result is a phenomenon termed "arc blowout." By this limit on arc time, contacts are subjected to less erosion and have longer life.

3. THE VACUUM "SELF-PUMPING" FEATURE

When the ionized metal vapor expands, as described above, it entraps gas molecules on the inner relay envelope, maintaining or even increasing the vacuum level.

4. LOW AND STABLE CONTACT RESISTANCE

This varies from cycle to cycle in conventional relays but remains stable over the life of a vacuum relay. This is due to: cleanliness of parts, lack of oxidation or contamination, and use of non-magnetic materials in the contact area. No contact maintenance required.

5. FAST OPERATE TIME

Short contact travel and low mass contacts mean faster operate time and a lower coil power drain.

6. SMALLER SIZE AND WEIGHT

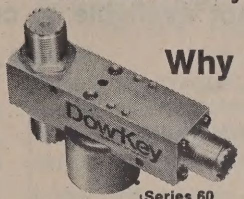
Due to small contact gap and short contact travel made possible by a vacuum dielectric, package size and weight are reduced.

7. SAFETY

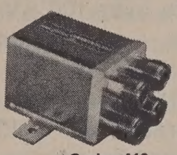
Contacts are sealed within the vacuum envelope, switching in explosive atmospheres may be safely accomplished.

Coaxial Relays: Hz to GHz

Why Use Dow-Key?



Series 60



Series 412

- Coaxial Relays
- Vacuum Coaxial Relays
- Microwave Coaxial Relays

In recent years coaxial relay and microwave switch applications have expanded in number and increased in operating frequency. For 30 years, Dow-Key has been a pioneer in these trends by introducing new higher frequency, higher power, more versatile devices while maintaining its recognized standards of quality and performance.

Dow-Key relays continue to provide high isolation, low VSWR and insertion loss, along with reliable operation over a wide range of severe environments and broad frequency ranges. Options are available to fit your system. You can select RF power capacity, operating voltage, failsafe or latching, and standard and special RF connectors.

You should also consider Dow-Key **vacuum** coaxial relays. They combine the unique high power/high voltage capability of a vacuum relay with the RF performance of a coaxial relay. Look to Dow-Key to fill your requirements for rapid, reliable, low loss coaxial switching in a wide range of applications including:

COMMUNICATIONS

- Satellite terminals.
- Transmit-receive switching to common antenna, grounding of receiver to protect against burn out, switching of one transmitter to one of many antennas.
- Manual and remote multi-antenna switching, many antennas to one transmitter.
- Insertion of amplifiers into circuit.
- Switching of broadband carriers from failed to standby circuits.
- Matrix switching of multiple receivers.
- Transmit power sampling.
- Transmitters to multiple antennas.
- Transfer-crossover of transmitter-antenna or receiver-antenna pairs.
- RF self test.

CATV/CCTV

- Non-duplication switching RF head ends.
- Tone signal switching remote program control.
- Hospital video systems.
- Channel select, programming control.
- Closed circuit switching such as classroom TV teaching.
- Studio video signal switching.
- Switching of remote surveillance cameras to single monitor.

LABORATORY

- Switching between reference and unknown test circuits.
- Switching with high accuracy of fixed attenuators in and out of circuit.
- Multi-source monitor and test.

TELEPHONE

- Elimination of manual patch boards for carrier I.F. switching.
- Standby channel select (matrix type for complex routing).

Whether your need is for SPDT, transfer, or multiposition, whatever your actuator voltage, no matter what RF connector your system employs, Dow-Key has a standard relay or can adapt one in surprisingly short time.

Please call a Dow-Key applications engineer and let him lead you out of the coaxial relay wilderness.

Kilovac Vacuum Relays • **Dow-Key** Coaxial Relays

Kilovac Vacuum Relays

KILOVAC vacuum relays (ceramic or glass) are specified by design engineers for performance and reliability not available in conventional relays:

- Ratings to over 100 KV
- Long Life — one million plus operations
- Light Weight — as little as 1 oz.
- Non-oxidizing contacts
- Fast-Operate Time — 10 ms typical
- High Dielectric, smaller size per voltage/current rating

* **KILOVAC High Voltage/Medical Relays**

Since 1964 Kilovac Corporation has delivered thousands of high voltage relays especially developed for heart defibrillators (both hospital and portable models). DPDT relays (P/N KM-15 and KM-14) are used as "patient" switches; SPST versions (P/N KM-6 and H-4), used for dump/abort safety discharge. Highly qualified application engineering assistance is at your disposal.

Kilovac Vacuum Relays • **Dow-Key** Coaxial Relays

. . . in ceramic or glass

KILOVAC High Voltage Relays Mean . . .

VACUUM RELAY RELIABILITY means short contact travel, low contact mass, contacts free of oxides and pitting and minimum contact bounce. These long-life reliability features are made possible only because of operation in a high vacuum dielectric. Vacuum technology has made high reliability, long life high voltage switching practical, with considerable savings in space and weight. Developed for high voltage, high peak current applications, Kilovac relays are well suited and widely used in medical electronics, radar, communications, pulse forming networks, ECM, sonar, antenna switching and antenna couplers, microwave systems and switching in explosive atmospheres. Kilovac's broad line and "Quick Reaction Time" is geared to your most critical delivery schedule. We have the high vacuum experience, design and production capability to provide special modifications of our standard off-the-shelf designs in unbelievably short order.

HIGH VOLTAGE ISOLATION: 2000 volts per mil of contact gap with predictable, repeatable isolation well in excess of rated values.

LOW AND STABLE CONTACT RESISTANCE: 0.015 ohms typical with no contact oxidation or maintenance.

FAST SWITCHING TIME: 10 ms typical, due to small contact gap and short armature travel.

LONG LIFE: Millions of cycles with minimum degradation in electrical performance.

Any one of these standard features will justify your selection of KILOVAC vacuum relays. KILOVAC design and years of production experience permits immediate off-the-shelf delivery from a broad product line with voltages up to 100 KV. Special modifications quickly provided.

Series 400 — REMOTE COAXIAL RELAYS

The Dow-Key Series 400 microwave coaxial relays are designed to meet all requirements for high reliability, high performance, broadband coaxial RF switching. These relays are designed for use with cable and connector sizes of your choice.

Series 400 coaxial relays provide excellent electrical characteristics over frequency ranges of DC to GHz and can be optimized for maximum performance at any narrower band of interest. The relays are designed to provide a wide variety of optional RF and power connectors.

Kilovac Vacuum Relays • **Dow-Key** Coaxial Relays

...Hz to GHz

DOW-KEY coaxial relays may provide:

- Excellent VSWR • Very low insertion loss
- Resistor terminated inputs (optional)
- Vacuum switch elements for high power capacity
- Special contact arrangements to meet isolation loss requirements.
- Auxiliary switches for associated circuit control
- Multitude of connectors and coil voltages

VSWR Max.	Impedance Ohms	(1) Size (L x W x H) Inches	Approx. Weight (Oz.)
1.1	50	3.65 x 1.16 x 2.5	10

(4) Refer to following page for additional details.

HOW TO SELECT COAXIAL RELAYS

DON'T select precision connectors when the system and/or frequency does not require it.

DO specify nominal coil voltage and operating current.

DO specify basic function, i.e., SPDT, DPDT, etc., and whether or not external auxiliary contacts are required. If in doubt of function, supply a circuit diagram.

DO specify impedance. This is generally 50 ohms but many 50 ohm relays can be used in 75 ohm circuits with negligible discontinuity because electrical length of the relays is short at frequencies normally used at that impedance.

DO specify whether or not the unused part of the relay is shorted to ground, not shorted or resistor-terminated and the resistor values.

DO specify RF power requirements.

DON'T specify higher power than needed.

WHAT DOW-KEY NEEDS TO KNOW FROM YOU

CIRCUITS AND LOADS

Many times when relays fail to perform up to specification, it is due to lack of proper consideration of:

A. The VSWR of the load.
B. Required isolation between outputs and how it can be achieved.
C. Peak vs. average power and how phase affects max. voltage and current.
D. Ratings do not include hot switching.

The conditions listed above cannot be generalized, but must be considered unique to each application. It is therefore imperative that we be completely informed when selecting a relay for hot switching.

OPERATE TIME

Operate time of the relay is primarily a function of the coil power, since it requires in excess of 50% of the total switching time to build up the coil field sufficiently to initiate relay operation. To reduce the relay operate time, various means are available:

A. Increase coil current (Power).
B. Apply higher than normal voltage pulse to coil.
C. Lower voltage isolation requirements. (A smaller contact gap permits faster contact transfer time.)

With a combination of the above modifications operate times as fast as 500 microseconds are possible with specific types of relays.

LIFE (MECHANICAL)

Relay life takes in all the foregoing considerations. It is necessary to define life, usually in terms of end-of-life set of performance parameters. Terms like "Mean Time Between Failure" are frequently meaningless unless failure points are defined, and unless conditions of load, rate of operation, duty cycle, coil power and other parameters are specified. Test data on file indicates typical mechanical life will range in excess of one million cycles of operations.

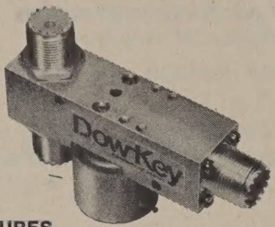
Kilovac® / DowKey

CORPORATION DIVISION OF KILOVAC CORPORATION

SERIES 60 SPDT

REMOTE COAXIAL RELAY



FEATURES

The Series 60 are remotely operated, ruggedly constructed, SPDT coaxial relays designed for operation to one KW. They are available with or without two Form C auxiliary contacts. For transmit-receive applications, they are available with a special high-isolation "G" connector at the NC or receive position. The G connector increases the isolation to greater than −100 dB at frequencies up to 500 MHz, but reduces the power rating of the normally-closed connector to 20 watts. G connectors will increase VSWR above 400 MHz. Data given for the Series 60 is applicable only when used in a 50-ohm transmission line. UHF connectors are not recommended above 400 MHz. Standard coils are 12 Vdc (48 ohms), 26 Vdc (245 ohms) and 115 Vac (5000 ohms). Other voltages are available on special order at a slight premium price or in minimum-order quantities.

SPECIFICATIONS

Operating Time .... 25 ms. Max.
Auxiliary Contact Rating .... 5 Amps., 115 Vac

MECHANICAL DATA

Life Expectancy .... 1,000,000 cycles
Weight .... 10 oz. Approx.
Finish: R.F. Contacts .... Gold Plated Fine Silver
Auxiliary Contacts .. Gold Plated Fine Silver

CONNECTORS AND PART NUMBERS

Connector Type	Std. SPDT	With Aux. Contacts	With NC "G" Conn.	With 2C Aux. & NC "G"
UHF	60-XX04	60-XX0442	60-XX28	60-XX2842
N	60-XX01	60-XX0142	60-XX25	60-XX2542

In the above data, the "XX" following the hyphen represents the coil voltage. When ordering, replace the XX with the appropriate coil number, as follows:

22 = 12 Vdc 23 = 26 Vdc 26 = 115 Vac

COAXIAL SWITCHES

78 SERIES MULTI-POSITION TYPES

Manually operated switches with true coaxial switching members (not wafer switches). Useful frequency range 0-500 MHz. RF power rating: 1.5 KW at 50 MHz, 1 KW at 100 through 400 MHz. Impedance: 50 ohms. Body size: 3" dia. x 1". Weight: 10 oz.

Dow-Key Model	Conn. Type	Description
78-0204	UHF	SPDT
78-0304	UHF	SP 3-Pos.

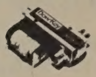
COAXIAL RELAYS

77 SERIES SPDT TYPES



Medium-size, light weight, low-priced coaxial relays for industrial and military uses. Available with or without one Form C auxiliary contacts. Power rating: 150 W at 50 MHz, 75 W at 1 GHz. Body size: 1.88" x 0.75". Weight: 3 oz.

Dow-Key Model	Conn. Type	Coil Volt.	With 1 Form C Aux. Contacts

Other coil voltages and connector types are available for Dow-Key relays; contact factory.

Kilovac CORPORATION . . . small enough to be responsive, large enough to be responsible.

Kilovac Corporation, of which Dow-Key is a division, manufactures a broad line of high-voltage vacuum relays, with voltage ratings up to 100 KV, for use in radio frequency communications, medical instruments, industrial electronics, radar, sonar and space systems.

Kilovac's high vacuum technology has made possible smaller and lighter relays than previously available for high-voltage switching.

Designed for switching radio frequency circuits employing coaxial transmission lines, Dow-Key relays provide high efficiency with low SWR and excellent isolation. The relays are available in a variety of coil voltages and currents, power ratings, connector types and switching modes.

SPECIALS

These pages cover only the standard, most popular Kilovac/Dow-Key relays. We manufacture many more products than shown, and invite your inquiries.

Kilovac/Dow-Key offers the original equipment manufacturer a diverse background of designing and producing special relays to exacting specifications.

Latching relays, hermetically sealed relays and a wide variety of switching arrangements, non-standard connectors, attached cables of various types (with or without connectors) and special coils are available.

Your inquiries regarding relays designed to your specifications will receive prompt attention from our Engineering and Marketing Departments.

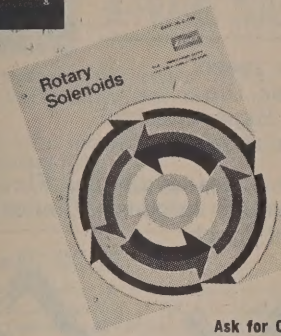
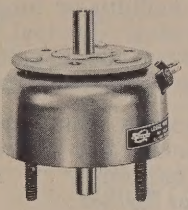
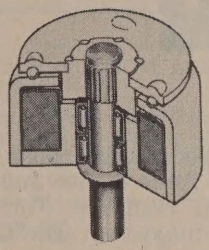
ROTARY SOLENOIDS



Ask for Catalog C-1000





230 stock models for quick prototype starts
Fast, direct rotary action

Ledex Rotary Solenoids step, turn, pull, push, index, hammer, punch or trigger — whenever there's a need for fast and dependable direct rotary action. Known for high force-to-size, ability to resist shock. Family of 8 basic sizes with right and left hand strokes from 25 to 95 degrees. Torque to 117 pound-inches. Wide choice of stock models offer economy and quick starts on prototypes. LIFE: 100,000,000 actuations with special endurance engineered models.

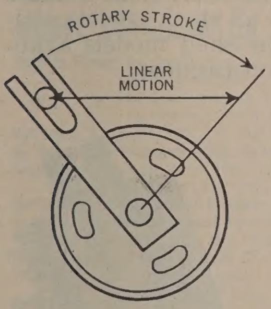
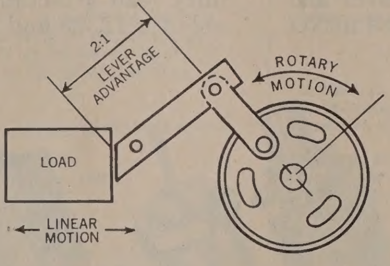
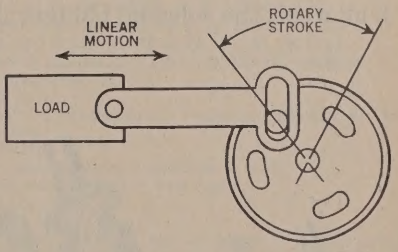
Rotary Solenoid as a Linear Actuator For Longer Strokes



SHAFT BAR LINK



ARMATURE LEVER



ARMATURE DRIVE PIN

When the stroke length is beyond the range of Ledex straight pull solenoids, a rotary solenoid may be the best solution.

Ledex rotary solenoids have raceways coined in the armature and stator. With precision ball bearings riding on inclined raceways, the solenoid provides direct, almost friction-free rotary motion. In the beginning of the stroke, where the output of a linear solenoid is low, the raceways are steep. Toward the closed end, where the magnetic attraction reaches maximum force, the raceways taper off. The effect is to evenly distribute the force.

Ledex solenoids can help you get a lot of work done in places where you don't have much room. We make both push/pull and rotary solenoids in a wide variety of shapes and sizes to solve just about any actuating problem you have.

Call Ledex when you need a lot of power in a small space to push, pull, turn, twist, step, index, hammer, punch or trigger. For a quick start on your prototype, choose from 230 different stock model designs. Or, send details and we'll custom design a space-saving solenoid for you.

PUSH & PULL SOLENOIDS

You name the job.
Short, medium or long stroke. High speed.
Tight space. Unusual load. Ledex has the
solenoid for you, usually on the shelf. Expert design
assistance for your toughest custom requirements.

Pancake shaped Ledex push/pull solenoids are built for high force to size and fast response. Better than 10ms response. Form factor minimizes size, provides maximum pole face surface for best efficiency. Two types available. Flat face is for short stroke, rapid response. Conical face gives more mid-range punch.

*Not shown

Quality engineered for efficiency and long term dependability, the Ledex long stroke solenoid has a built-in impact cushion pad to absorb energy at the end of the power stroke. For smooth travel and long wear, the solenoid plunger is electroless nickel plated. It rides in a smooth bushing track designed for positive alignment and low friction. Slotted and cross drilled plungers on all stock models simplify load attachment. Off-the-shelf models available for 12, 28 and 100 VDC operations.

D-FRAME SOLENOID

Ledex D-Frame solenoids offer several benefits. The simplified design allows construction methods that result in a more cost effective product.

All solenoids provided with quick connect terminals for fast hook-up. Leads can be provided if desired.

Load attachment through slotted and cross drilled electroless nickel plated plunger for simplified attachment and longer life.

The plunger cavity is an integral part of the bobbin which is constructed of glass filled nylon to meet or exceed class "B" NEMA standard insulation requirements.

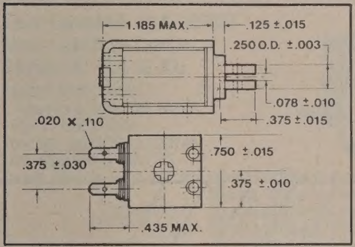
The frame is cadmium plated with a supplementary dichromate treatment for added corrosion resistance. Multiple, tapped mounting holes provide for easy installation and interchangeability.

MODEL L6-22 AC OR DC

Holding Force: DC Continuous* @ 24 VDC cold 35 oz. @ 24 VDC hot 32 oz.
DC Intermittent* @ 24 VDC cold 37 oz. @ 24 VDC hot 35 oz.
AC Continuous @ 120 VAC cold 9 oz. @ 120 VAC hot 6 oz.
AC Intermittent @ 120 VAC cold 8 oz. @ 120 VAC hot 7 oz.

Voltages: 6, 12, 24, 120 VAC or DC.
AC Operating Frequency: Std. 60 Hz.
Insulation Material: Class "B" (130°C) standard UL recognized materials used in construction.
Dielectric Strength: 1000 V (RMS).
Termination: Quick connect terminals standard.
Pull Type Operation: Standard. Made to order — Push Type.
Plunger Mass: 6.3 grams (.22 ozs.).
Total Mass: 48.2 grams (1.70 ozs.).

*Duty Cycle: $f = \dfrac{\text{“on” time}}{\text{“on” time + “off” time}}$ (“on” time = length of longest pulse during one cycle; not to exceed 300 sec.)



POWER REQUIREMENTS

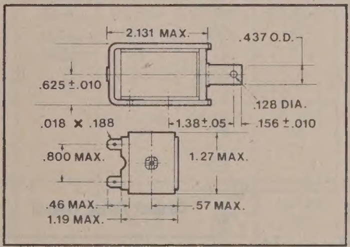
Duty Cycle	AC	DC
Intermittent f = ¼	9VA	8.5W
Continuous f = 1	5.5VA	4.0W
Life @ 25°C & 50% of full stroke	5 x 10⁶	

MODEL L25-11H AC OR DC

Holding Force: DC Continuous* @ 24 VDC cold 7 lbs. @ 24 VDC hot 5 lbs.
DC Intermittent* @ 24 VDC cold 8 lbs. @ 24 VDC hot 5½ lbs.
AC Continuous @ 120 VAC cold 59 oz. @ 120 VAC hot 50 oz.
AC Intermittent @ 120 VAC cold 90 oz. @ 120 VAC hot 85 oz.

Voltages: 6, 12, 24, 120, 240 VAC or DC.
AC Operating Frequency: Std. 60 Hz.
Insulation Material: Class "B" (130°C) standard UL recognized materials used in construction.
Dielectric Strength: 1000 V (RMS).
Termination: Quick connect terminals standard. Available — Leads.
Pull Type Operation: Standard. Made to order — Push Type.
Plunger Mass: 43 grams (1.50 ozs.).
Total Mass: 177 grams (6.25 ozs.).

*Duty Cycle: $f = \dfrac{\text{“on” time}}{\text{“on” time + “off” time}}$ (“on” time = length of longest pulse during one cycle; not to exceed 300 sec.)



POWER REQUIREMENTS

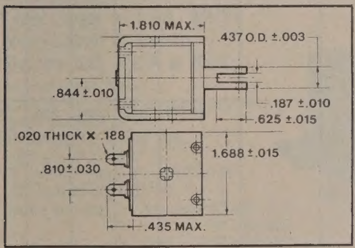
Duty Cycle	AC	DC
Intermittent f = ¼	40VA	19.5W
Continuous f = 1	16VA	8.5W
Life @ 25°C & 50% of full stroke	1 x 10⁷	

MODEL L44-02H AC OR DC

Holding Force: DC Continuous* @ 24 VDC cold 144 oz. @ 24 VDC hot 133 oz.
DC Intermittent* @ 24 VDC cold 180 oz. @ 24 VDC hot 158 oz.
AC Continuous @ 120 VAC cold 60 oz. @ 120 VAC hot 55 oz.
AC Intermittent @ 120 VAC cold 75 oz. @ 120 VAC hot 70 oz.

Voltages: 6, 12, 24, 120, 240 VAC or DC.
AC Operating Frequency: Std. 60 Hz.
Insulation Material: Class "B" (130°C) standard UL recognized materials used in construction.
Dielectric Strength: 1000 V (RMS).
Termination: Quick connect terminals standard. Available — Leads.
Pull Type Operation: Standard. Made to order — Push Type.
Plunger Mass: 35 grams (1.25 ozs.).
Total Mass: 368 grams (13 ozs.).

*Duty Cycle: $f = \dfrac{\text{“on” time}}{\text{“on” time + “off” time}}$ (“on” time = length of longest pulse during one cycle; not to exceed 300 sec.)



POWER REQUIREMENTS

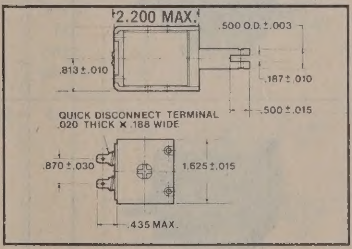
Duty Cycle	AC	DC
Intermittent f = ¼	66VA	31W
Continuous f = 1	16.5VA	10W
Life @ 25°C & 50% of full stroke	20 x 10⁶	

MODEL L51-04H AC OR DC

Holding Force: DC Continuous* @ 24 VDC cold 176 oz. @ 24 VDC hot 152 oz.
DC Intermittent* @ 24 VDC cold 260 oz. @ 24 VDC hot 250 oz.
AC Continuous @ 120 VAC cold 50 oz. @ 120 VAC hot 43 oz.
AC Intermittent @ 120 VAC cold 110 oz. @ 120 VAC hot 88 oz.

Voltages: 6, 12, 24, 120, 240 VAC or DC.
AC Operating Frequency: Std. 60 Hz.
Insulation Material: Class "B" (130°C) standard UL recognized materials used in construction.
Dielectric Strength: 1000 V (RMS).
Termination: Quick connect terminals standard. Available — Leads.
Pull Type Operation: Standard. Made to order — Push Type.
Plunger Mass: 66 grams (2.3 ozs.).
Total Mass: 425 grams (15 ozs.).

*Duty Cycle: $f = \dfrac{\text{“on” time}}{\text{“on” time + “off” time}}$ (“on” time = length of longest pulse during one cycle; not to exceed 300 sec.)



POWER REQUIREMENTS

Duty Cycle	AC	DC
Intermittent f = ¼	171VA	36W
Continuous f = 1	31VA	12W
Life @ 25°C & 50% of full stroke	5 x 10⁶

SUBMINIATURE RELAYS

Leach subminiature relays have set the industry standards for technology and reliability for decades. With their proven high performance in the most demanding applications, they are ideal for your critical subsea, shipboard, ground-based and aerospace applications.

Our Balanced Force™ subminiature relays are rugged, high-environment relays for applications where size, weight and reliability are important. For systems where size and weight are critical, our Series III subminiature relays are the smallest, lightest aircraft relays made with their contact ratings, and are 40% the size and weight of our J and K Series relays, yet offer the same high performance. Both relay types are available in a variety of termination, mounting and operating configurations.

Subminiature Relays Dry Circuit to 10 Amps

POWER AND CONTROL RELAYS

Leach power and control relays have been used for decades in commercial and military aircraft, trucks and buses, ships and tanks—any application that calls for proven durability, high performance and long life.

To ensure that you get the right relay for your application, our power and control relays are available in a broad range of configurations. You can choose from various terminal and mounting styles, dust and moisture resistant and hermetically-sealed enclosures, and a variety of operating ratings and characteristics.

ELECTRONIC TIME DELAYS AND SENSORS

To simplify systems interfacing and integration, we have a complete custom facility for the design and production of timing and sensing systems.

They are available with Leach MIL-Standard relays or special solid state outputs, manufactured with discrete circuitry or thick film hybrids manufactured to MIL-STD-883, Class B requirements.

In addition to the standard products shown below, we can provide:

- —Combinations of voltage, frequency and phase sequence detection with built-in time delays for systems monitoring.
- —Solid state relays with up to 3PNO contacts and ratings up to 25 amperes to MIL-STD-704 power requirements.
- —Relay drivers for multiplex interface and isolation, conforming to MIL-R-28776.
- —Solid state switching devices, ac and dc motor controllers, circuit breakers, current sensors and remote power controllers.

Liberty Controls for Solenoids and

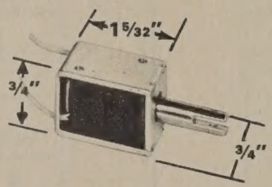
SOLENOIDS

Liberty Controls Inc. has a full line of both C frame and solid frame solenoids which can be tailored to fit your needs. These shown below are some of the standard lines which cover a variety of applications. Each size is shown as pull solenoids and are complimented by a push type with similar force characteristics. Plungers and plunger stops are made from magnetic steels and annealed after machining for maximum efficiency.

The duty cycle ratings are very important in a solenoid application and continuous duty units should be used whenever possible for safest operation. When the force requirements exceed the capabilities of a continuous rated coil, it is essential to give us complete information regarding the intended duty cycle and power source limitations so that we can design and manufacture the best coil for your application. A good rule of thumb is that if the unit is going to be "on" for four (4) minutes or longer, a continuous duty coil should be used. Let us suggest the appropriate coil for duty cycles less than this four minutes.

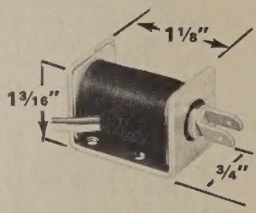
Remember, these solenoids shown are just a few examples of our line, and we encourage you to contact us about your specific requirements.

TYPE 60



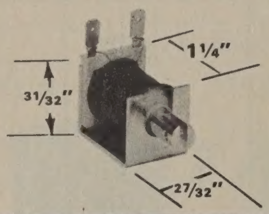
This solid frame solenoid has many light industrial and business machine applications. It is provided with solder, 3/16" quick connect terminals or leads. It has improved efficiency in this small size because it is a solid frame design.

TYPE 61



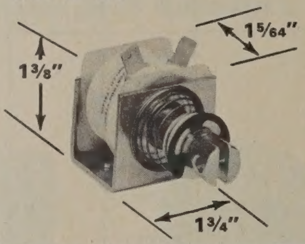
This C frame unit is designed for cost efficiency required in vending machines, slide projectors, automotive actuators and similar applications where volume is high and cost is a prime consideration. It is most often provided with ¼" quick connect terminals, but leads are available.

TYPE L-24



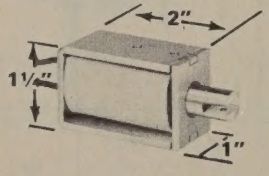
This C frame design is similar to the 61 but slightly larger and is designed for longer life. Its applications fall into the light industrial, business equipment, and calculator areas. It is readily interchangeable with other competitive solenoids and can be provided with several varieties of termination.

TYPE 62



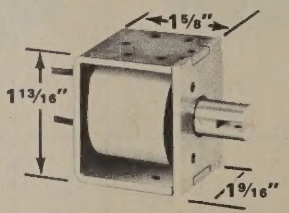
This C frame unit is larger than any of the above described C frames and is used widely in cash drawer applications where a large pull force is required on a pulse duty basis. It is compact and very efficient for this application. Again various terminations are available.

TYPE 82



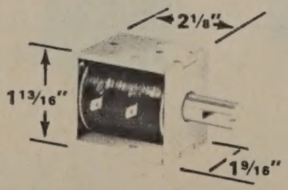
This solid frame solenoid is a medium force unit that has excellent magnetic circuit design. It is used in medium industrial applications where a longer stroke is required. It has been applied in door latch mechanisms and similar applications where side loading is a significant factor. Various terminations are available.

TYPE 88



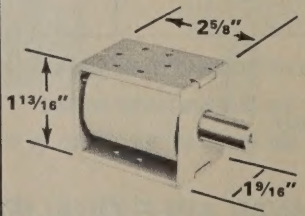
This solid frame unit is the smallest in a series of medium to heavy duty applications. It is used primarily in industrial applications where a short stroke is desired and space requirements are limited. These are used in computer peripheral devices for head loading, write disable indicator retractors, and other similar needs.

TYPE 89



This solid frame unit is the next stop up from the 88 in longer stroke capabilities. Many of the same applications would apply here as in the 88, but generally the force is required over a slightly longer distance. This unit uses a brass plunger sleeve for longer life and better support in side loaded applications.

TYPE 90



This solid frame solenoid is the largest of our standard line and is the longest in the 88, 89, 90 Series. As can be seen from the force characteristics curves on the adjacent page, this solenoid has the longest force distance ability. As with the whole series, the various terminations are available.

Liberty Controls, Inc. 500 Brookforest Avenue, Shorewood, Illinois 60431 815/725-2241

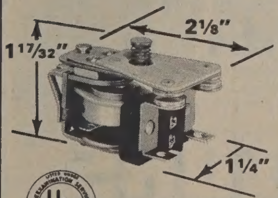
GENERAL PURPOSE TYPE RELAYS

Liberty Controls has an outstanding reputation for its line of General Purpose Relays. These relays perform dependably in many diverse applications including light to medium switching and plate circuit operations, in process controls and communication equipment. More recently many of these types of relays have been used as safety features on power equipment, such as, line monitoring for stray currents, discharging voltage on shutdown, and equipment shutdown through fault detection.

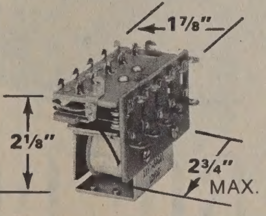
A wide variety of contact arrangements and ratings are available in our general purpose relay family. Minimum contact pressures of 25 grams are maintained on the smaller relays while the larger power relays perform at upwards of 200 grams contact pressure. Standard contacts are made of Silver Cadmium Oxide for low resistance qualities and then gold flashed to prevent corrosion and retard pitting which generally occurs with inductive loads.

SERIES 250



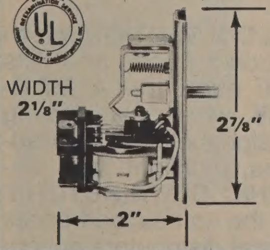
ELECTRICAL CHARACTERISTICS:
CONTACTS: Rated at 25 amps @ 120-240 VAC resistive and 1 HP @ 120-240 VAC. ACTION: SPST Normally open, double break. OPERATING VOLTAGES: 6, 12, 24, 115, 203 VAC; 6, 12, 24, 110 VDC. TERMINALS: 1/4" quick connect for contacts, 3/16" quick connect for coil. MOUNTING: Frame drilled and tapped for one (1) 6-32 screw and locating tab. Optional with 5/16" X 6-32 stud and w/o locating tab. SPECIAL: Available with 5 amps SPDT auxiliary switch.

SERIES 630



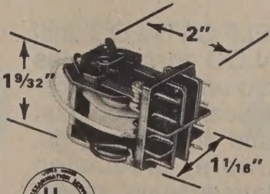
ELECTRICAL CHARACTERISTICS:
CONTACTS: Rated at 15 amps. 120V 60 Hz. resistive using gold plated silver contacts as standard. ACTION: DPDT thru 5PDT. OPERATING VOLTAGES: 6, 12, 24, 48, 115, 230 VAC; 3, 6, 12, 24, 48, 110 VDC. TERMINALS: Solder or screw type. MOUNTING: Frame drilled and tapped for four (4) 6-32 screws. SPECIAL: Available in ST normally open or normally closed action. Also provided in 8, 12, and 18 pin Jones Plug or 8, 12 and 20 pin octal type plug.

SERIES 218



ELECTRICAL CHARACTERISTICS:
CONTACTS: Rated at 5 or 10 amps using silver cadmium oxide as standard. ACTION: SPST thru 3PDT. OPERATING VOLTAGES: 6, 12, 24, 115, 230 VAC; 5, 6, 24, 110 VDC. TERMINALS: Combination 3/16" quick connect, or solder, or printed circuit type. MOUNTING: 2 holes 10-32 tapped in front plate as shown or 6-32 tapped hole in base of relay. APPLICATION: This relay is typically used in safety circuits and unit shutdown circuits where a pulse to the coil will operate the relay and then the unit bar to be released manually through the reset button.

SERIES 210



ELECTRICAL CHARACTERISTICS:
CONTACTS: Rated at 5 or 10 amps using silver cadmium oxide as standard. U/L approved. ACTION: SPOT thru 3PDT. OPERATING VOLTAGES: 6, 12, 24, 115, 230 VAC; 6, 12, 24, 110 VDC. TERMINALS: Tab, solder, or printed circuit type. MOUNTING: Frame drilled and tapped for one (1) 6-32 screw and locating tab. Optional with 5/16" X 6-32 stud and w/o locating tab. SPECIAL: Available with SPST normally open or normally closed action. Also available as a manual reset or latching relay. Special plate circuit coils can be provided.

MASTER CATALOG
FORMERLY: OFF-THE-SHELF CATALOG
THE ONLY NATIONAL CATALOG OF ELECTRONIC PARTS, INSTRUMENTS AND EQUIPMENT DESIGNED EXCLUSIVELY FOR DISTRIBUTORS AND THEIR CUSTOMERS.

YESTERDAY'S RADIO MASTER IS TODAY'S

ELECTRONIC DISTRIBUTORS MASTER CATALOG

Known as O-T-S, OFF-THE-SHELF CATALOG until this edition, the MASTER CATALOG encompasses the following product areas: audio and communications equipment; electromechanical components; electronic circuit components and subassemblies; panel components and hardware; production equipment and tools; test instrumentation; power sources; wire and cable; and related materials and chemicals.

The MASTER CATALOG is broken down into four basic sections. **A GENERAL INDEX** which lists manufacturers and products alphabetically. **A MANUFACTURERS' CATALOG SECTION** which displays their respective product pages and lists their addresses and phone numbers. **A MANUFACTURERS' DIRECTORY,** where participating manufacturers, again listed alphabetically with addresses and phone numbers, highlight their distributors. And a **GEOGRAPHIC DISTRIBUTORS' DIRECTORY** which includes the names, addresses and phone numbers of the local distributors nationwide which stock the products of manufacturers whose data appears in the "Manufacturers' Catalog Section."

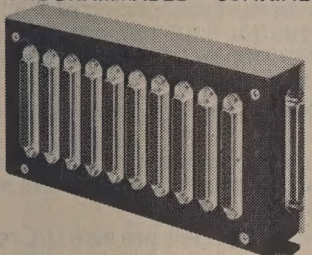
COAXIAL SWITCHING SYSTEMS

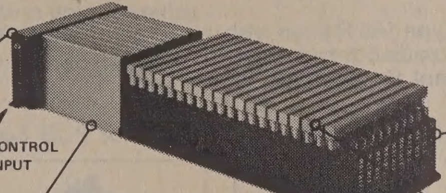
PROGRAMMABLE – COAXIAL RELAY MATRIX



MODEL 6310 DECODE MODULE

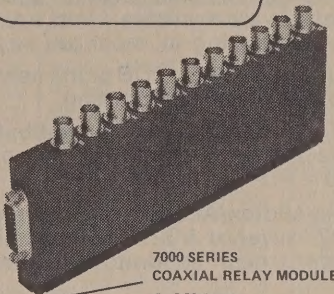
- Computer controllable
- 16 bit parallel or ASCII input
- TTL/DTL compatible
- Decodes 200 switchpoints
- Expandable

MODULAR ASSEMBLY



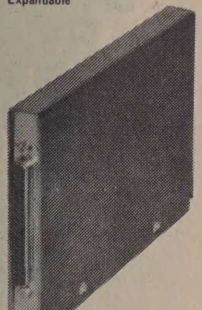
CONTROL INPUT

TYPICAL CONFIGURATION
(10 x 20 MATRIX)



7000 SERIES COAXIAL RELAY MODULE

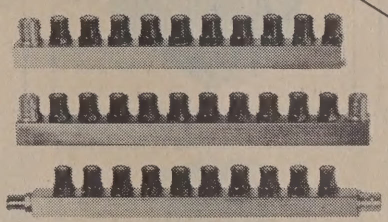
- 2-20 throws
- 106 dB isolation @ 100 MHz
- 100 watt switching
- DC-300 MHz
- Switched shield
- Self terminating
- 50 or 75 ohm
- Machined housing
- 28 V control



6100 SERIES LOGIC MODULE

- Controls 2-20 switchpoints
- TTL/DTL compatible
- X - Y addressable
- 28 VDC control output
- Latching
- J - K flipflops
- Hex gate drivers

PUSH-ON CROSS STRAP



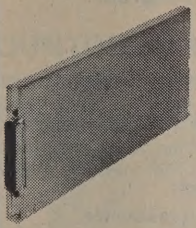
9100 SERIES

9200 SERIES

9300 SERIES

CROSS STRAPS INTERCONNECT COAXIAL RELAYS TO FORM CROSSBAR CONFIGURATION.

TWO WIRE AUDIO RELAY MODULE

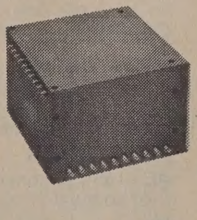


FEATURES:

- Programmable
- Two pole-twenty throw
- Contains four independent two pole, five throw relays
- Dry reed or mercury wetted contacts available
- Independent control
- Compatible with 6100 series latching and drive module
- May be connected in a 2 x 10 or 4 x 5 matrix configuration
- Reed switches easily accessible
- 28 V control

MODEL 6157

10 x 10 VIDEO RELAY MATRIX

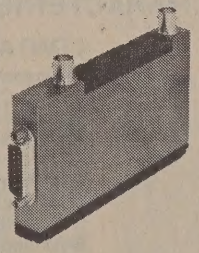


FEATURES:

- Any of ten inputs may be connected to any of ten outputs
- Computer programmable
- Random addressable
- Low VSWR
- Signal circuits isolated from control circuitry
- Switchpoints individually field replaceable
- Stripline construction
- SMA connectors
- 28 V control

MODEL 6160

PROGRAMMABLE COAXIAL ATTENUATOR

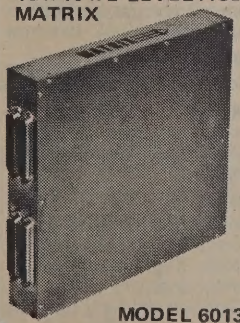


FEATURES:

- 0 - 63 dB Range
- One dB steps - .5 dB optional
- Pure six bit binary control
- Low VSWR
- Continuous shield continuity
- Signal circuits isolated from control circuitry
- Attenuator elements field replaceable
- Compatible with 6100 series latching logic
- 28 V control

MODEL 6152

10 x 10 x 2 LEVEL AUDIO RELAY MATRIX

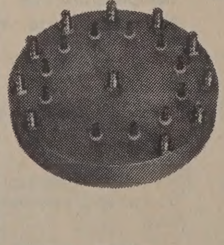


FEATURES:

- Random access
- Balanced switching
- Flexible format
- 1 ms switching
- Scanner capability
- Programmable
- DC - 100 KHz
- 28 V control

MODEL 6013

RADIAL RELAY

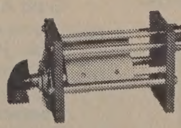


FEATURES:

- 10 throws
- Matched port to port delay
- Low VSWR
- 5 VDC control
- 50 ohm
- Machined housing
- Coaxical construction
- SMA connectors

MODEL 6210

R.F. ROTARY SWITCH



FEATURES:

- Two throw
- Center off
- Self terminating
- 50 or 75 ohm
- Hermetically sealed contacts
- Panel mount
- BNC connectors
- Low VSWR
- High Isolation

MODEL 6172

Matrix Systems Corporation manufactures a variety of Switching Devices. Whether you are Switching VHF, Video, Pulse or Audio or your control requirements are programmable or manual. Give us a call. We specialize in specials. (213) 882-2008

MIDTEX Type 156 4PDT

Miniature 5 Ampere
Industrial Relay
U/L & CSA Recognized

The Type 156 4PDT Relay is a compact and versatile industrial relay. Low level switching gold contacts, universal gold flashed silver, or silver cadmium oxide power contacts are available. Units are dust covered. Terminals are solder/plug-in, taper tab or printed circuit.

Various solder, PCB or the new solderless wrap sockets provide versatile mounting.

Type 156 options are pushbutton actuators, opposite pole barriers, indicator lamps, special mounting brackets and 2 PDT contacts.

All Midtex/AEMCO dust covered Type 156 Relays with 3/32" silver or 3/32" silver cadmium oxide contacts have Underwriters' Laboratories Component Recognition for Motor Controllers through 240 VAC in accordance with Underwriters' Laboratories Standard 508 "Industrial Control Equipment." They provide through air spacing of 1/16" minimum and over-surface spacing of 1/8" minimum, and are recognized for 1/10 horsepower motor control applications at 120/240 VAC. Opposite polarity on adjacent poles U/L is also available.

Sockets are constructed to meet U/L requirements for these ratings.

The gold alloy and palladium contact models meet the same spacing and insulation requirements, but are meant for lighter contact loads.

Certain hermetically sealed models are also U/L recognized.

MIDTEX INC. 1650 TOWER BLVD. • NORTH MANKATO, MINNESOTA 56001 • (507) 625-6521 • TWX: 910-565-2244

MIDTEX Type 157 1, 2 & 3PDT

Open & Dust Covered
5 & 10 Amp
Industrial Relay
U/L & CSA Recognized.

The Type 157 3PDT Relay is a rugged power driver, offering superior 3/16" through air and 3/8" over-surface spacing. An interlocked frame and contact block prevents contact misalignment during plug-in. Open or dust covered. The relay is available with neon bulb indicator lamps and push-to-operate buttons.

A magnetic latching version provides a unique switchable core, which cannot be falsely latched.

All Midtex/AEMCO catalog Type 157 Relays, except magnetic latching, have Underwriters' Laboratories Component Recognition as Motor Controllers through 600 VAC in accordance with U/L Standard 508 "Industrial Control Equipment." They provide through air spacing of 3/16" minimum and over-surface spacing of 3/8" minimum and are recognized for 1/2 HP motor controller applications at 240/480/600 VAC (1/3 HP at 120 VAC).

Sockets are constructed to meet U/L requirements for these ratings, except the P/C board socket.

Chassis mounted open relays must employ 1/32" additional insulation between mounting surface and relay, to insure 1/2" over-surface and through air to the mounting surface.

MIDTEX
Type 159, 160, 166 1PDT

Mercury-Wetted Contact Relay SPDT Printed Circuit Module

The Mercury-Wetted Contact Relay is one of the most reliable relays on the market, and is used extensively in telephone communications, process computer interface, or any critical application requiring billions of operations life, stable contact resistance and faster than 2 millisecond operate speeds.

The type 159, 160 and 166 utilize a 2 ampere contact, Form C or Form D (specify) contact action.

See Midtex Engineering Bulletin 159/160 for proper contact protection requirements. Mounting within 30° of vertical required.

The adjustments available on the Type 159 and 160 Mercury-Wetted Relays are single-side-stable, bi-stable, or 1% dynamic balanced polar. The balanced polar adjustments provide less than 1% distortion in Neutral and Polar Telegraphy and Pulse Data Transmission applications. The low profile Type 166 is available in single-side-stable or bi-stable adjustments.

All types have single or dual coils, depending upon the requirement.

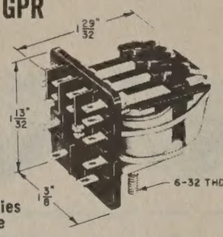
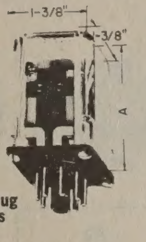
OHMITE® electro-mechanical relays

MODEL GPR



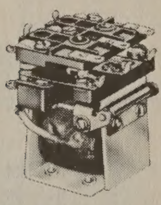
GPR Series 4-Pole

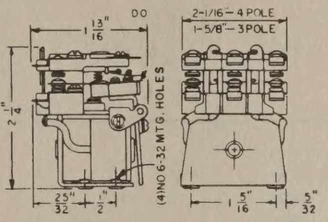


For Octal Plug GPR Series

Simple, rugged, low cost relays handling substantial power for small size. Uncomplicated design provides unusual flexibility for making and changing connection and mounting.

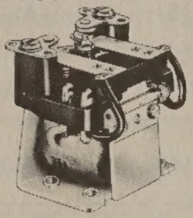
MODEL DO

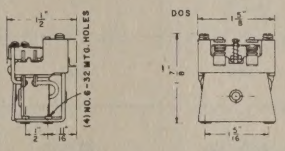




Particularly adaptable to aircraft and mobile equipment applications where severe shock and vibration are encountered. Design of molded parts around contact arms protects against mechanical injury. Stocked in 3-pole or 4-pole type, and also in hermetic enclosures and in latching types.

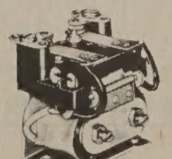
MODEL DOS

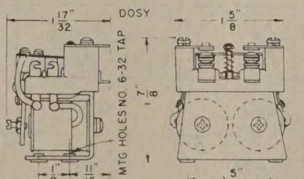




Wide application, general purpose relay, compact and lightweight. Handles loads usually demanded of much larger relays. Meets rigorous aircraft relay standards.

SENSITIVE MODEL DOSY





Similar in construction to Model DOS relay but equipped with twin coils for increased sensitivity. The DOSY relay is adaptable to a wide range of electronic control applications such as plate circuit controls, or as overload or underload controls in D.C. circuits to signal attainment of predetermined current levels.

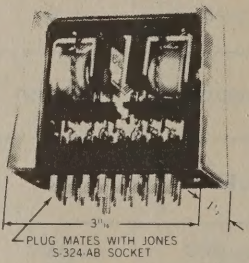
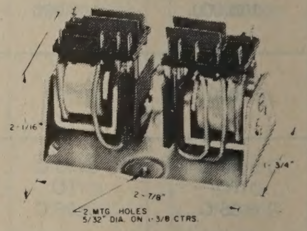
MODEL GPR LATCHING RELAYS

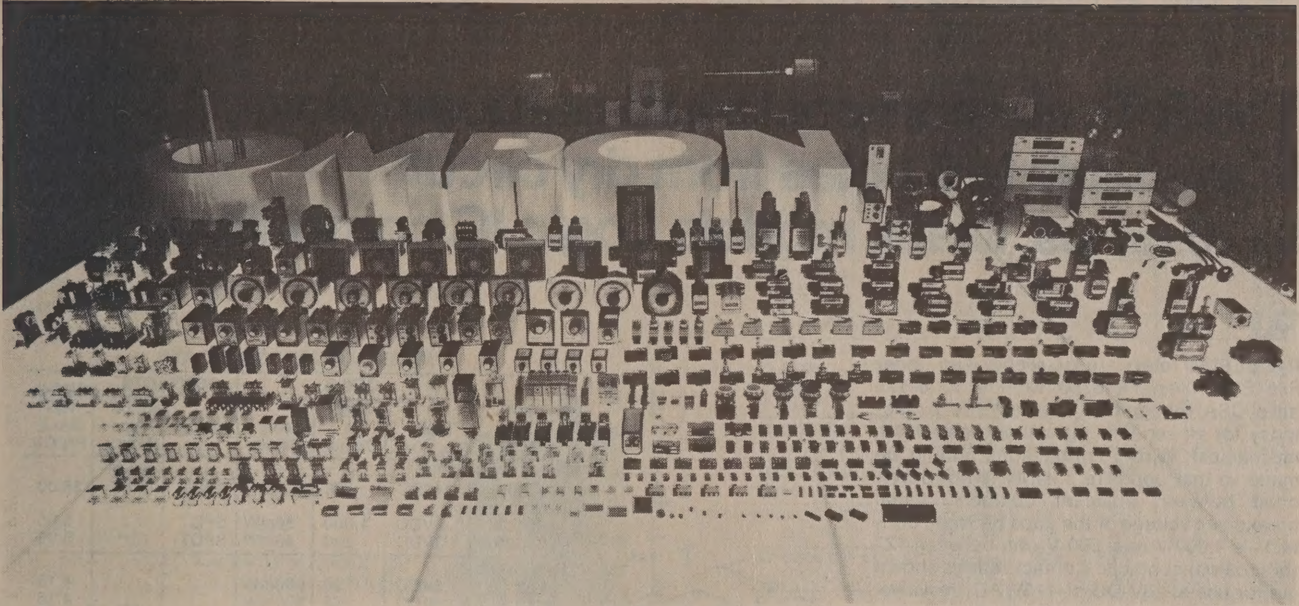


Enclosed Latching Relay

Relay 6PDT Latching



Latching relays consist of two GPR relays with armatures linked so that the n.o. contacts of one are mechanically latched in closed position when, and after, this relay is energized. When 2nd relay is energized, first relay restores and latches 2nd. Permits switching of twice the number of circuits and holding without coil current.



Omron manufactures a broad line of quality control components and devices. Allow Omron to satisfy your needs.

The R10, our compact multi-purpose relay, is available to 8 poles from dry circuit to 10 amps. Many models Logic IC compatible.

R10 SERIES relays are UL recognized under File E42810 and E46750. Models to 6PDT have CSA recognition. Contact life expectancy for all series is 10 million operations, mechanical. Wiring connections should be made so that opposite polarity is not developed between adjacent contacts. Initial breakdown voltage of the gaps between contacts is 1,000 V rms; 500 V rms between "Z" (bifurcated) contacts. Contact ratings shown are for use at 28V DC or 115V AC, resistive. Maximum current is shown in parenthesis. "E1" relays have .012" x .080 x .210" long solder terminals with #3-48 mounting stud. "V" relays are DC voltage actuated. Pickup is approximately 75% of rated coil voltage. Dropout is 10% minimum. "J" relays are current actuated (DC). Maximum pickup is listed in "Input" column. "SS" relays are sensitive DC voltage actuated. Maximum pickup power of SPDT R10 — SS1.0K and — SS220 is 20 mW DC @ 25°C. Weight is 0.8 to 1.4 oz.

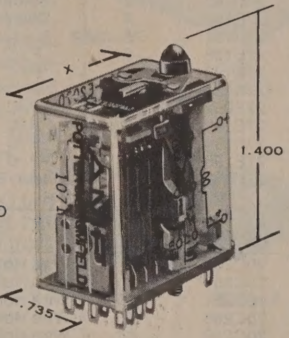
POTTER & BRUMFIELD RELAYS

R10L SERIES Has a light emitting diode (LED) indicator. LED produces highly visible red light when relay coil is energized. Especially useful when troubleshooting an instrument, equipment, or system. LED has long operating life and high reliability. Other operating characteristics same as standard R10 Series relays. LED is available on relays with coils up to 48 volts DC. Relays fit standard R10 Series sockets.

Note: Observe polarity indicated when wiring R10L- with LED.



X= FROM .95 (2 POLE) TO 1.580 MAX. (8 POLE)

R10-E6 is a standard R10-E1 (solder terminals) fitted with a bracket on the narrow side of its case for chassis mounting. The bracket has one #6-32 x .375" stud and one locating tab on .437" centers.

POTTER & BRUMFIELD RELAYS

R10 sockets for chassis, PC board, strip or panel mounting multiply your design options.

MOUNTING STRIP FOR R10-R15 RELAYS
Contains twenty pre-punched break-away mounting plates stamped from .064" aluminum. Designed to simplify mounting one or more R10, R12, R13, R14, or R15 relays on chassis or racks. Each individual plate accepts a 2, 4, 6, or 8 pole solder terminal relay or socket.

When a socket is used, it is held in place by one #3-48 screw and nut in the hole provided. Or, the relay may be mounted without a socket by inserting its mounting stud through the hole in the plate and fastening a #3-48 nut on relay stud.

Single plates may be mounted over a rectangular hole measuring 1.62" x .750" maximum or a 1.62" round hole.

For rack or panel installation, the entire 20-piece strip (approx. 24" long) may be mounted. Reinforcing of the strip may be required depending on the number of plates used and the particular mounting circumstances.

GROUNDING STRIP

BU buzzer provides dependable 120 Hz signal source.

BU BUZZER AC operated coil with a spring steel armature which buzzes when coil is energized. Used extensively in test equipment, laboratories and a host of other applications where a small light weight, dependable buzzer is required. Recognized under the Component Program of Underwriters' Laboratories, Inc. (File No. S1154). Weight: 1⅝ ozs. Mounting: No. 6-32 tapped core.

Our lowest cost general purpose PC board relay, the R50, switches up to 6 amps.

R50-Y1 and Y2 relays seat .425″ high for use on printed circuit boards spaced as close together as 0.6″ center-to-center. Nominal pick-up power for R50-Y1 is 330 mW DC; for the R50S-Y1, 160 mW DC; for the R50-Y2, 410 mW DC; for the R50S-Y2, 290 mW DC; and for the R50-X1 from 450 to 562 mW DC. Pickup is approximately 75% of rated coil voltage. Dropout is 5% minimum. All models are covered with a molded polyester case and have gold-plated pc terminals spaced on a 0.1″ grid. Contact life expectancy at rated load is 500,000 operations, minimum. All models are U/L recognized.

Contact rating: R50, 2 amps @ 28V DC or 1 amp @ 120 AC resistive. R50S, 1 amp @ 28V DC or 0.5 amp @ 120V AC resistive. R50-X1, 5 amps @ 28V DC or 2.5 amps @ 120V AC resistive. Approximate weight: R50-Y1, 0.3 oz.; R50-Y2 and R50-X1, 0.5 oz.

Low-profile T10 relays feature 4 amp permissive-make contacts. And they are TTL buffer compatible.

T10 is a DC operated relay only .425″ high, allowing printed circuit boards to be mounted on 0.6″ centers. It has permissive-make contacts noted for low bounce and long life. Operate and release times are each 15 ms, including bounce. Suffix "Y" denotes gold-clad silver, single-button contacts rated to 3 amps @ 28V DC or 120V AC, resistive. Suffix "Z" denotes gold-clad silver, bifurcated contacts rated from low level to 1 amp @ 60V DC or 120V AC, resistive. A polyester cover snaps in place over the relay to keep out dust and other contaminates.

All models have UL Recognition under file 46750. Weight is approximately 1.06 oz.

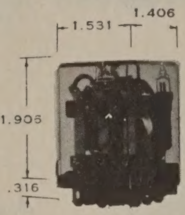
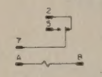
POTTER & BRUMFIELD RELAYS

Now, KU relays are available with 5 volt coils—operate from the same 5 volt source used to drive T^{2}L circuits.

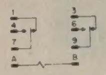


KUP-KUMP relays have polycarbonate dust cover, are UL Recognized under file E22575, and CSA Listed under file 15734. Models with suffix "25" have push-to-test button to manually actuate contacts for circuit testing. Models with suffix "35" have highly visible neon lamp to indicate coil power. Models with suffix "45" have both button and lamp.

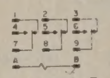
Contact ratings of all KUP models are for duty at either 28V DC or 240V AC, 80% PF. Power rating of 10 amp contacts is ¼ HP, 120V AC; and ⅓ HP, 240V AC, 80% PF. The 5 amp contacts are rated 1/10 HP, 120V AC; and ¼ HP, 240V AC, 80% PF.



1 FORM C

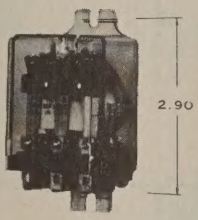


2 FORM C



3 FORM C

KUMP contacts are rated 15 amps, 277V AC, 80% PF; ¼ HP, 120V AC; and ⅓ HP, 240V AC. Contact life expectancy for both relay series is 10 million operations, mechanical, and 100,000 operations at full load. At loads of less than maximum rating, life expectancy rises accordingly. All models have .187" QC/solder terminals. KUP with suffix "55" has bracket mount case unsuited for socket mounting. All other models use sockets and hold-down springs listed below. Weight is approximately 3 oz. each model.



SOCKETS FOR KUP-KUMP RELAYS

For mounting KUP-KUMP plain case, KUA, KUL, and KUR RELAYS; CL and CU time delays. All sockets are UL Recognized for 10 amps at 240V AC.

SPDT/DPDT/3PDT pierced solder terminal socket rated 10 amps. Molded nylon; has two .165" dia. mounting holes.

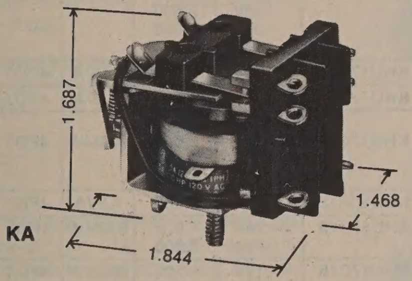
POTTER & BRUMFIELD RELAYS

KA and KAP SERIES Small, low cost, highly efficient general purpose relays for handling light power loads such as small motors, solenoids and other relays, and general automation work. All KA and KAP relays have CSA listing (File No. LR-15734) and carry U/L component recognition (File No. E22575). Mechanical life expectancy: 10 million operations. Duty: Continuous. Contact rating: suffix AG and DG, 10 amps @ 120 VAC or 6 amps @ 240 VAC; suffix AY and DY, 5 amps @ 120 VAC or 3 amps @ 240 VAC. "G" suffix indicates silver-cadmium oxide.



The KA is the open version of this series. Mounting: One No. 6-32 threaded stud and locating tab on .438 centers. Wt: 2 ozs. The KAP is the enclosed model and is protected by a clear polycarbonate dust cover. Terminals: 8 or 11-pin plug. Weight: 3 ozs.

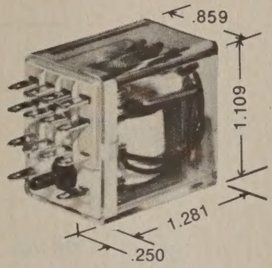
POTTER & BRUMFIELD RELAYS

KH series relays switch to eight circuits from low level to 3 amps in little more than one cubic inch.

KHU/KHS SERIES small, rugged 4PDT relays are available for AC or DC operation. KHU relays are recognized under the Component Program of UL and CSA. KHU has clear polycarbonate dust cover; KHS is hermetically sealed in metal enclosure. Relays are designed to meet exacting requirements of data processing, computer and process control applications. Various contacts available: suffix "1" denotes gold-flashed silver rated 3 amps @ 30V DC or 120V AC, resistive; suffix "2" denotes silver-cadmium oxide rated 3 amperes; suffix "3" indicates gold alloy contacts for low level to 1.0 amp applications; suffix "6" indicates gold overlay on silver, bifuracted contacts rated 1 amp @ 30V DC, resistive, or 120V AC. Suffix "N" denotes a neon lamp in parallel with the coil to provide visual indication that power is reaching the coil. Mounting: Solder terminals with No. 3-48 stud .312" long. All relays fit sockets (below) with printed circuit or solder lug terminals. Weight without sockets: KHU 1.12 oz.; KHS 1.63 oz.



KHU

NOTE, KHS RELAYS SHOULD NOT HAVE FRAMES GROUNDED WITHOUT CONSULTING FACTORY FOR LOAD LEVELS.

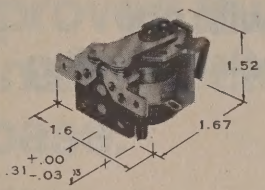
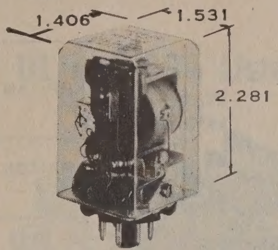
POTTER & BRUMFIELD RELAYS

KR3-H SERIES Ruggedly constructed but of small size, KR3-H is a heavy duty relay especially designed for applications where limited space is a factor. Its heavy duty copper-alloy movable contact carrier has twin silver-cadmium oxide contacts rated 20 amps @ 120V AC 60 Hz, resistive, or 28V DC; 1 HP 120/240V 60 Hz. Contact arrangement is 1 Form X (SPST-NO-DM) only. Terminals: suitable for .250" quick connect, also solder; for contacts: solder only for coil. Size: 1.6" x 1.671" x 1.52". Seated height: 1.21". Mounting: One No. 6-32 stud and locating tab on .437" center. Weight: 2 ozs.



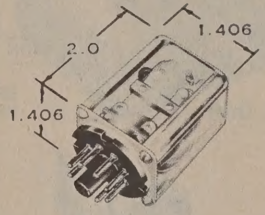
KRP3-H SERIES All electrical specifications listed above for the KR3-H series relays apply to the KRP3-H. However, the KRP3-H is enclosed in a clear polycarbonate dust cover and features an octal plug-in base. Weight: Approximately 3 ozs.



KRP3-H Hold-Down Spring

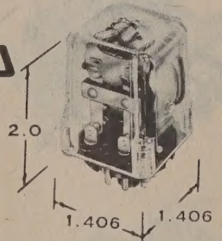
Hold-down spring will accommodate machine screws or rivets.

20C206 **LIST $.19**

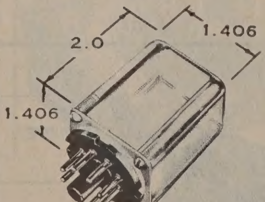


KR11-E and KR14-E SERIES Hermetically sealed in a metal can. Has octal-type plug and gold-flashed silver contacts rated 5 amps @ 120V AC, 80% P.F., or 28V DC, resistive. Suffix "G" denotes silver cadmium oxide contacts rated 10 amps @ 120V AC, 80% P.F., or 28V DC, resistive.

KRP SERIES Versatile, multi-contact arrangement. Enclosed in a clear polycarbonate dust cover. Standard 8-pin octal-type plug. for KRP5 and KRP11, 11-pin for KRP-14. Weight: Approx. 3 ozs. Contacts: 5 amp, Gold flashed silver, 10 amp silver-cadmium oxide. See KCP-KRP hold-down spring for special mounting applications. See KRP-N indicator lamp relay for current monitoring applications.



KRP-N INDICATOR **LAMP RELAY** A general purpose relay incorporating a lamp to indicate current or voltage availability in power circuit. Contacts: Silver-cadmium oxide rated 10 amps. Enclosures: Clear, polycarbonate dust cover. Mounting: Standard octal plug. Weight: Approximately 3 ozs. Hold-down spring (Please see Page 10).



"P" Case is a clear polycarbonate case for mounting rectifiers, capacitors, resistors or other components. Octal type termination. 8 pin, 35D070. 11 pin, 35D072. Comes with four screws. Weight: 0.5 oz.

35D070 **LIST $.84**
35D072 **LIST $1.01**

Hold-down spring for "P" Case, and KRP series relays will accommodate machine screws or rivets.

POTTER & BRUMFIELD RELAYS

A screwdriver is all you need for quick mounting of many P&B relays with our screw terminal sockets and track mounting system.

OCTAL-STYLE SOCKETS

For KRP, KRP3-H, KAP, KBP, KCP, EBT, and EBA relays; CD-21, CD-38, CH, CK, and CR time delays; and CS sensor.

Molded polycarbonate, 8-pin screw terminal socket, rated 10 amperes.
27E122 **LIST $2.97**

Molded polycarbonate, 11-pin screw terminal socket, rated 10 amperes.
27E123 **LIST $4.45**

TRACK MOUNT SYSTEM FOR SOCKETS

Extruded aluminum, three-foot section with slotted holes on 6″ centers for #8 screws.
24A064 **NET $2.33**

Plastic clip for mounting sockets 27E122 and 27E123, above, and socket 27E166, page 4. Two clips required per socket.
24A072 **NET $ .12**

Aluminum retainer with #6-40 tapped hole for mounting sockets 27E121 (page 7), 27E122, 27E123, and 27E166. Includes one #6-40 x ¹³⁄₃₂″ screw. Two retainers and screws required per socket.
24A071 **NET $ .08**

Plastic twist-clip requires no screws; will mount 27E121 only. Two required per socket.
24A067 **NET $ .11**

Stainless steel hold-down clip restricts movement of relay mounted in socket 27E121 Two clips required per socket.
20C253 **NET $ .10**

TRACK MOUNT SYSTEM

HP SERIES is recommended for applications such as TV cameras, dictating machines, desk top computers, copying machines, etc. Contacts are rated 0.3-2 amps @ 28 VDC, resistive; 0.1-0.5 amp @ 120 VAC @ 25°C. Circuit board or socket mounting. Encased in a nylon heat-sealed (non-hermetic) cover. Terminals on a .2″ grid. Weight: 3 oz.

HPS SERIES Hermetically sealed HP above. HPS is designed for reliable performance in logic circuits or where prolonged submersion of pc boards in cleaning solvents may be required. Recommended for use in applications requiring more critical specifications than HP relay provides. HP socket may be used for mounting. Sealed metal enclosed relay weighs .25 oz.

POTTER & BRUMFIELD PAGE 13 A—Alternating Current, e.g. PRD3A
D—Direct Current, e.g. PRD3D

America's most popular 30-amp relay improved three ways! Supported terminals, enclosed coil, tough phenolic base.

Direct replacement for famous PR Series

The PRD is a UL-CSA listed, heavy duty power relay designed for high inrush current applications such as motor starting and incandescent lamp loads. This relay is an improved design of our PR Series. It has reinforced screw terminals which virtually eliminates the risk of terminal breakage when the relay is installed. Also, the coil of the PRD is housed in a protective plastic enclosure to minimize the possibility of damage to the coil.

Model for model, PRD is directly interchangeable with the PR. For example, a PRD7AYO replaces a PR7AYO; same size, mounting holes, and electrical characteristics. PRD has a life expectancy of 100,000 operations at full load. Contact life increases when operated at reduced loads or with appropriate arc suppression. The floating movable contact carrier provides excellent pressure and wipe between contact surfaces, thus keeping voltage drop to a minimum between mating contacts.

Model PRDA11AYA has a miniature snap-action switch with SPDT contacts rated 5 amps at 120V AC. All models mount using two .188" dia. holes on 1.875" centers.

Weight is 11 oz. maximum. For relay enclosure, see PRD Dust Cover on next page.

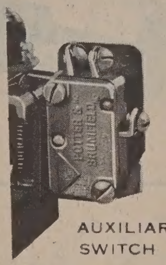
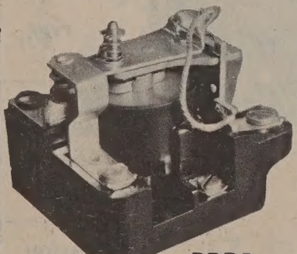
PRD3



AUXILIARY SWITCH



PRD5

PRD IS IC LOGIC COMPATIBLE
PRD relays with 12V DC or 24V DC coils are compatible with IC drivers used to terminate logic boards. The 12V DC coil requires 170 mA; the 24V DC coil, just 84mA. When being driven directly by an IC such as TTL or CMOS with driver, the coil of the PRD must be paralleled with signal diode to allow coil back-emf to recirculate through the coil.

PRD RELAYS LISTED BY UL AND CSA

Type	Suffix		Contact Rating
	AC	DC	
PRD 1, 3, or 5	AY	DY	25 amps @ 277 V AC, resistive, 1 hp @ 120/240 V AC
PRD 7 or 11	AY	DY	25 amps @ 240 V AC, 20 amps @ 277 V AC, resistive, 1 hp @ 120/240 V AC.
PRD 7 or 11	AG		30 amps @ 240 V AC, 20 amps @ 277 V AC, resistive, 1 hp @ 120/240 V AC, 10 amps @ 600 V AC, resistive.

POTTER & BRUMFIELD RELAYS

PM SERIES A compact 4PDT power relay for polyphase and heavy duty switching applications. Screw terminals. (PMT has .250″ quick-connect terminals.) Has silver-cadmium oxide contacts rated at 25 amps at 240V, 50/60 Hz resistive AC, 1 HP per movable arm at 120V or 240V, AC single phase, U/L (File No. E22575) and CSA listed. Mounts by one front key-hole and two rear channel slots for 8-32 screws on 2″ x 2.5″ triangular centers. Weight: 14 ozs.

AB and ABC SERIES are UL/CSA recognized. For applications requiring long life and quiet operation. Available for AC and DC operation, these relays have a mechanical life expectancy in excess of three million operations. All models have silver contacts and .250″ quick-connect terminals. Screw terminal adaptors are available. AB is open; ABC is enclosed in a non-hermetic, heavy metal dust cover. Contact rating: "H" style contacts, 15 amps @ 277 VAC, ¾ H.P., 120/250 VAC; "Y" style contacts, 10 amps @ 120 VAC, or 5 amps @ 240 VAC resistive. Mounting: AB, two 8-32 tapped holes on 1.250″ centers. ABC, one ⅜″ x 8-32 metal stud and locating tab on .562″ centers. Approximate weight: AB, 5 oz.; ABC, 7 oz.

The R10S is a 2 mA, sensitive, general purpose relay for direct drive from CMOS, TTL, I²L, ECL and HTL.

R10S SERIES relays are very sensitive, current-actuated DC relays for direct drive by DTL, TTL, ECL, and HTL. UL and CSA are pending. Available in solder (E1), and pc board (E2) termination. Maximum pickup current is listed in "Input" column. Weight is 0.8 to 1.4 oz.

See page 5 for Socket Information.

POTTER & BRUMFIELD RELAYS

The industry's broadest line of time delay relays and timing modules!

THE CD SERIES is available in delay on operate or release for use with an external relay. There are four cases styles: The CD-21 is designed for use with an external KRP relay. The CD-31 is designed for use with an external KHP relay. The CD-38 has an internal 10 amp DPDT relay and the CD-45 is designed for use with an external PRD relay.

Tolerance: ±5%. For Knob Adj. versions see Dial Scale. Res. Adj. (low end): Min. specified or less. (For AC units add ± ½ cycle 60 Hz.)
Delta Time: ±5%. (For AC units add ±1 cycle 60 Hz.)
Repeatability: ±1% for 38 style. All others ±2% (For AC units add ±1 cycle 60 Hz.)
Temperature Range: Operating: − 40°C to + 55°C.
Storage: − 55°C to + 85°C.
Dial Scale: Time in seconds, calibrated:

Setting	Tolerance*
Maximum	±5% of specified maximum
Minimum	Specified minimum or less
Other	±10% full scale

Release Time: 45 milliseconds typical; 60 milliseconds maximum.
Recycle Time: Less than 60 milliseconds for CD-38 units (internal shorting contact); 2.0 seconds for CD-21, CD-31, and CD-45 units (no shorting contact).
Transient Protection: 1000V, all 120V AC units except CD-31 style.
Polarity Protection: Yes.
Timing Cycle Interrupt Transfer: None.

POTTER & BRUMFIELD RELAYS

CG SERIES

CG Series relays are available in time delay on operate, or interval on. They feature a C/MOS integrated circuit controlling a DPDT relay having contacts rated 10 amps @ 120V AC, or 5 amps @ 240V AC resistive. Repeatability, including first cycle of operation, is typically .01% for DC units, and 0.1% for AC units. The delay time provided by the IC network is not normally affected by voltage transients encountered in industrial applications. The relay contacts will not transfer if timing cycle is momentarily interrupted. Weight is approximately 8 ozs.

Repeatability (including first cycle of operation): AC: 0.1% typical, ±0.5% maximum, but not less than ±16 msec. DC: 0.05% typical; ±1% maximum, but not less than ±3 msec.
Tolerance: +10% —0% of max. specified at high end. +0% —10% of min. specified at low end.
Not less than ±16 ms for AC units and ±10 ms for DC, all units.
Dial Scale: In seconds or minutes, reference only.
Delta Time: ±2% typical, ±5% max.
Temperature Range: Operating; —10°C to +55°C.
Storage; —40°C to +85°C.
Release Time: 30 ms typical, 45 ms maximum.
Recycle Time: AC: ms typical; 60 ms maximum.
DC: 30 ms typical; 45 ms maximum.
Transient Protection: 1,000V on all 120 & 240 VAC units
Polarity Protection: Yes.
Timing Cycle Interrupt Transfer: None.
Weight: Approximately 8 oz. (226.64 gm.)

NOTE: See page 38 for Socket Ordering Information and explanation of timing functions and notes

Dia. 1

CH SERIES

The CH series is intended for a wide range of industrial applications where economy is of greater interest than highly critical performance. It is available in two types: Knob-adjustable with the relay in the same enclosure as the solid state unit. The second type has a fixed time delay period that is set at the factory and cannot be modified; its case has no knob. The CH series is available for time delay on either operate or on release.

Tolerance:
Knob Adj. units: —0 +20% of maximum specified @ high end; minimum specified, or less, @ low end.
Others: ±5%.
(For AC units add ±½ cycle 60 Hz.)
Delta Time: ±10%. (For AC units add ±1 cycle 60 Hz.)
Repeatability: ±2%. (For AC units add ±1 cycle 60 Hz.)
Temperature Range: Operating: —10°C to +55°C.
Storage: —55°C to +85°C.
Contact Rating: DPDT 10 amps @ 120V AC 60 Hz.
Dial Scale: Reference only.
Release Time: 125 milliseconds typical: 200 milliseconds maximum.
Recycle Time: 125 milliseconds typical: 200 milliseconds maximum.
Transient Protection: 1000V, all 120V AC units.
Polarity Protection: Yes.
Timing Cycle Interrupt Transfer: Contacts may transfer momentarily if timing interval is interrupted.

POTTER & BRUMFIELD RELAYS

CL SERIES

Designed for delay on operate the CL Series is similar to the CU with the exception that they don't have timing cycle interrupt transfer and will time to 0.1 second. These solid state time delays are ideal for AC or DC applications. A DPDT KU relay rated 10 amperes is mounted in the same enclosure, forming a compact assembly. CL relays are enclosed in yellow polycarbonate dust covers and are available in three types: fixed, resistor adjustable and knob adjustable. Plug-in/quick-connect terminals facilitate handling and hook-up.

Tolerance:
Knob Adj. Types: −0 +20% of maximum specified @ high end; minimum specified, or less, @ low end.
Res. Adj.: ±10% high end; min. spec. or less at low end.
Fixed: ±5%.
(For AC units add ±½ cycle 60 Hz.)
Repeatability: ±3%. (For AC units add ±1 cycle 60 Hz.)
Temperature Range: Operating: −10°C to +40°C.
Storage: −55°C to +85°C.
Contact Rating: DPDT 10 amps @ 120V AC 60 Hz.
Dial Scale: Reference only.
Release Time: 100 milliseconds typical; 150 milliseconds maximum.
Recycle Time: 100 milliseconds typical; 150 milliseconds maximum.
Transient Protection: 1,000V on all 120V AC units.
Polarity Protection: Yes.
Timing Cycle Interrupt Transfer: None.

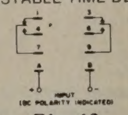
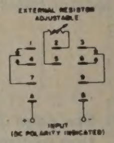
ADJUSTABLE TIME DELAY



Dia. 10



Dia. 11

CU SERIES

CU Series relays are available in three types: Fixed time delay, adjustable with an external resistor, and knob adjustable with a reference scale. For minimum time (on external resistor types) terminals 2 and 5 must be shorted together . For maximum time, the listed resistor must be connected between terminals 2 and 5. For intermediate values, a lesser value resistor or a potentiometer is used. Either fixed or resistor adjustable models can be furnished in two types of enclosures with the relay mounted in the same case as the solid state circuit. All CU Series contain DPDT relay of the KUP series listed on Page 8.

Tolerance:
Knob Adj. Types: −0 +20% of maximum specified @ high end; minimum specified, or less, @ low end.
Adj. types: ±10%.
(For AC units add ±½ cycle 60 Hz.)
Repeatability: ±3%. (For AC units add ±1 cycle 60 Hz.)
Temperature Range: Operating: −10°C +40°C.
Storage: −55°C to + 85°C.
Contact Rating: DPDT 10 amps @ 28V DC resistive or 120V AC 60 Hz, 80% PF.
Dial Scale: Reference only.
Release Time: 150 milliseconds typical; 225 milliseconds maximum.
Recycle Time: 150 milliseconds typical; 225 milliseconds maximum.
Transient Protection: 1,000V on all 120V AC units.
Polarity Protection: Yes.
Timing Cycle Interrupt Transfer: Contacts may transfer momentarily if timing cycle is interrupted.

NOTE: See page 38 for Socket Ordering Information and explanation of timing functions and notes

• Denotes U/L

* External resistor (not furnished) for maximum time. Recommend ¼ watt minimum resistor.

R16—our lowest cost time delay relay assembly.

R16 time delay on operate is available in the timing range of 2.0 to 30 seconds. A potentiometer is used to set the timing values. All components are mounted on a .062″ G10 glass/epoxy printed circuit board having .250″ quick-connect termination. Contacts have a life expectancy in excess of 10 million operations, mechanical, and at least 100,000 operations at full load @ 28V DC. The relay has a polyester cover ultrasonically welded to its base to keep out dust and contaminates. Cleaning by immersion is not recommended. The board mounts with #6 screws. Relay contacts will not transfer if timing cycle is interrupted.

Tolerance: Potentiometer adjust—set to any range, within specified range.
Delta Time: ±10%.
Recycle Time: 100 ms for 95% recovery.
Timing Cycle Interrupt Transfer: For AC inputs—momentary.
Temperature:
  Operating; −10°C to +55°C.
  Storage; −40°C to +85°C.
Mounting: Four clearance holes for #6 screws.
Weight: 1.5 oz. approximately.
Transient Protection: 100V for 100 μsec.
Repeatability: ±3% max.
Polarity Protection: Yes.

Timing functions and notes

DELAY ON OPERATE — The delay period begins when input voltage is applied. The relay will remain de-energized until the end of the delay period, at which time it energizes and operates the output contacts. Reset is accomplished by removal of the input voltage.

INTERVAL ON — The relay operates immediately upon application of input voltage. At the end of the adjustable, predetermined interval the relay drops out, even though input voltage may still be applied. It will remain dropped out until re-application of input voltage. Reset is accomplished by removal of input voltage.

DELAY ON RELEASE — The relay operates immediately upon application of input voltage. When input voltage is removed, the relay remains energized until the end of the delay period.

NOTES: 1. Has internal relay with DPDT contacts rated at 10 amperes, 120V AC; except CU Series, 10 amps @ 250V AC. **2.** Use with Potter & Brumfield relay KRP5AG-120V AC, KRP11AG-120V AC or KRP14AG-120V AC. **3.** Use with KRP5DG-24V DC, KRP11DG-24V DC, or KRP14DG-24V DC relay. **4.** Use with Potter & Brumfield KHP17D11-24V DC relay. **5.** Resistor shown in diagrams 12, 13 and 14 applies to CJH series only. **6.** Use w/Potter & Brumfield PRD11AY-120V AC relay. **7.** Internal relay contacts rated at 10 VA. **8.** Use 750K resistor for maximum time. **9.** Use 33K resistor for ½ maximum time. **10.** Use 200K resistor for ½ maximum time. **11.** Use with Potter & Brumfield KHP17A11-120V AC relay. **12.** Use 400K resistor for ½ maximum time. **14.** Use 1.6 meg. resistor for ½ maximum time.

HIGH VOLTAGE DEVICES

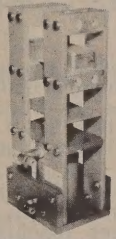
RELAYS
SWITCHES
MEASUREMENT
CONTROL UNITS
ENERGY STORAGE
SAFETY AND ACCESSORIES

AC
DC
RF
PULSE
1 KV TO 600 KV
ELECTRONIC AND POWER

HV RELAYS E SERIES

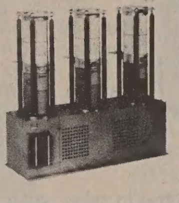
HV relays of the air insulated type both for low and high current. This series has ratings from 1 to 600 amps continuous, 100 to 100,000 amps momentary and capacitor discharge. Peak test voltages from 5 to 300 KV. Single or multipole. NO, NC and DT. Auxiliary contacts optional on all types. Extended life and tungsten contacts also for high current closing.

HIGH CURRENT SWITCHES G SERIES



Models are available over 20,000 amps continuous, and over 500,000 amps pulse, with voltage ratings of 6 volts to 300 KV peak test. Many are air cylinder or motor operated for high contact force.

VACUUM CONTACTORS CIRCUIT BREAKERS

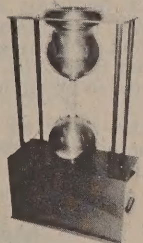


Vacuum switches, single phase, three phase, upright or low profile, for high reliability sealed arc interrupting or crobar shorting. 5 to 200 KV RMS operate. 50 to 4,000 amps continuous, 2,000 to 35,000 amps AC, 10 to 10,000 amps DC interrupt, 5,000 to 100,000 amps momentary and capacitor discharge.

HV ROTARY SWITCHES R SERIES

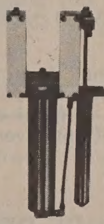
Ratings from 5 to 100 KV, 1 to 500 amps. Either manual or electrical operators, depending upon requirements. Position detents and interlocks to prevent opening under load.

HV GROUNDING RELAYS D SERIES



Extra high voltage low corona grounding relays of the air insulated type. Ratings up to 600 KV peak at 100 amps continuous. Solenoid, motor or air cylinder operated and spring or gravity return.

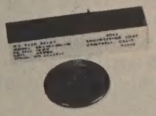
HV RF SWITCHES RF SERIES



For RF applications, low loss G-7 Silicone glass insulation and non-magnetic materials are used. Switches available up to 50 MHz. 1 to 50 KV, 1 to 800 amps. Air or hydraulic, and spring actuated.

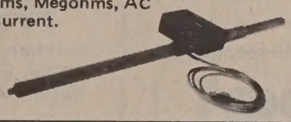
HV REED RELAYS

Reed relays from 5,000 to 30,000 volts with current carrying capabilities 1 ma to 3 amps continuous. Actuator voltages from 6 V to 230 V AC or DC are available. Over 10 million operations. With terminals or fully insulated HV leads.



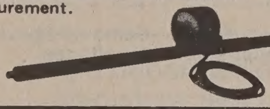
HV DIGITAL PROBE VMDP SERIES

HV Safety Probes for any Digital Display or VTVM. Also available complete with large 4½ - digit display 0.1% to 5% AC/DC accuracy, safety handle digital voltmeter. Battery/AC with charger. Removable Digital Display or Multimeter. Shielded. 0.0001 V to 200 KV. 0.05% accuracy basic, with DCV, ACV, Ohms, Megohms, AC and DC Current.



Hi-Z™ HV VOLTMETERS SAFE POWER LINE USE AC - DC

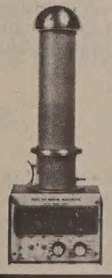
Fully safe portable, all solid state, 2% to 5% accuracy. Taut band shielded high voltage measurement with minimum circuit loading. 0.0001 V to 240 KV AC and DC. Ideal for use with Elbow capacitance tap voltage test points. For cable test point or direct line voltage and phasing, or differential measurement.



SOLENOID DRIVERS ENERGY STORAGE UNITS

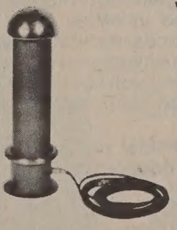
For high speed or loss of power automatic circuit breaker trip and for high speed activation of contactor or circuit breaker solenoids. Energy storage up to 400 joules or more at 150 to 700 volts or more, 100 to 4,000 microfarad or more. Instantaneous SCR control available.

HV DIGITAL MULTIMETER



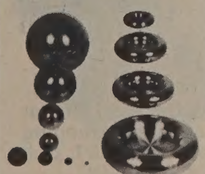
Easy to read, 4½-digit display; 0.05% basic accuracy. 0.0001 volt to 450 KV. Battery/AC with charger. Recorder and scope outputs. DC, AC PK, AC RMS average, AC RMS true, RF to 250 MHz, ohms, megohms, AC and DC current, Peak Memory. Removable Digital Multimeter. Panel mounting optional.

HV VOLTAGE DIVIDERS



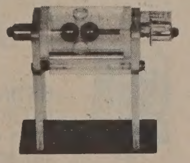
Precision compensated resistance-capacitance voltage dividers for 30 KV to 450 KV, DC to 1 MHz or to 0.2 USEC rise time pulse. 1,000/1 ratio matched to 1 megohm, 20 to 50 pf display or recorder, or as required. Accuracy and stability 0.1% to 3%.

TOROIDS, SPHERES, CORONA SHIELDS



Geometrically designed to avoid excessive voltage gradients at connecting points and other areas needing shielding or balancing of electrostatic fields to increase withstand voltage and minimize corona. Diameters are to international standard metric sizes.

HV ADJUSTABLE SPARK GAPS



Non-melting carbon spheres, 1 cm to 10 cm and heavy wall aluminum spheres, 10 cm and above. Dust tight transparent covers used 1 KV to 88 KV. Open style to 670 KV. Direct reading micrometer type calibrating device.

HV Safety Grounding Interlocks Grounding Rods, Safety Devices, Specialties.

Let us quote on specific items. Most relays are available NO NC, SPDT, and LATCHING, with 115 V 60 Hz actuators. Other voltages and frequencies available.

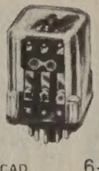
SCHRACK RELAYS

low cost • immediate delivery • highest quality

GENERAL PURPOSE RELAYS — INDUSTRIAL

CA

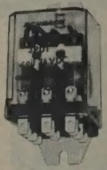


CAD

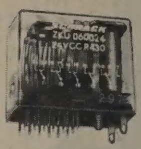
CA—A dependable, robust unit, similar to CAD series except open frame. Supplied with pierced .110 faston terminals for soldering or quick connect-disconnect P.C. terminals optional Coil voltage from 6—230 VAC. 50/60 cycle. 6—110 VDC.

CAD—A compact, plug-in relay with dust cover. Available with 1, 2, or 3 PDT contacts rated at 5 or 10 amps. The 8 or 11 pin base mates with any standard tube socket. Coil voltage from 6-230 VAC. 50/60 cycle, and 6—110 VDC.

RM—A small, low cost relay supplied with pierced .187 faston terminals for plug-in, soldering, or quick connect-disconnect application. Dust cover, plain style, for socket applications, or with slotted flanges on both ends of dust cover to permit bracket mounting directly to chassis. Sockets, neon lamps, test button available. U.L. recognized. File #E38891. **DPDT unit for 15 amp use.** 3 PDT unit for 10 amps.



ZKU—A dependable miniature general purpose relay for control circuits, automatic control systems and electronic devices requiring compact relay design and high reliability. Available with plug-in, solder or PCB terminals and 2, 4, or 6 Form C fine silver (gold flashed) contacts rated at 3 amps. Contact size: .078 O.D. Coil voltages from 6-110 VDC. Enclosed in dust cover, and can be mounted in any position.



ZLU—Same as above, only sil-cad. oxide contacts rated at 5 amps. Contact size: .100 O.D.

MINIATURE RELAYS

RA—A 4 PDT, U.L. recognized, miniature general purpose relay with gold flashed 3 amp contacts. Coil voltage from 6-220 VAC and 6-110 VDC. Available as plug-in unit to any one of 3 different socket types, with solder lugs or standard P.C. terminals. Enclosed in dust cover. Various contact materials available.

RAX—Same as above except U.L. recognized for opposite polarity voltages.

RU101—A SPDT low cost miniature relay built to meet stringent automotive Q.C. specifications. Widely used in office machines, alarm systems and appliances. Available for PCB mounting with Form C fine silver (gold diffused) contacts rated at 10 amps. Coil voltages from 3-110 VDC. Enclosed with snap-on nylon dust cover.

RU115—A miniature low profile relay with an unusually high rated breaking capacity of 10 amps at 2200 VA. The 1 Form C relay contact is rated @ 6 amps, 250 VAC continuous duty. Can be mounted in any position. Coil voltages from 5-110 VDC. Dimensions: $1\frac{1}{8}$'' long x $\frac{3}{4}$'' wide x $\frac{1}{2}$'' high, in clear dust cover for PCB mounting.

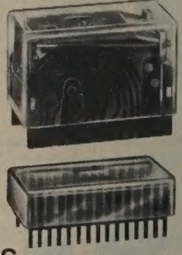
ZL880—A smaller relay than the RU101, available for PCB mounting. 1 Form C fine silver (gold flashed) contacts, rated at 6 amps at 250 VAC. Relay requires less power consumption than our RU115. Coil voltages from 3-110 VDC. Can be supplied with 2 coils - bifiliar winding; 2 coils - different coil resistances; or 2 coils - equal coil resistances. Low cost.

MAGNETIC LATCHING

CRD/CRF—A single coil magnetic latching relay similar in base design to the CAD or CAF series, CRD has octal or 11 pin base CRF pierced .110 faston terminals for soldering or quick connect-disconnect applications P.C. terminals can be furnished. Since no parts are subject to wear or friction, longer life is obtainable than with the mechanical latching relay. DPDT and 3PDT available at 10 amps. Enclosed in dust cover; aluminum dust cover optional with CRF type.

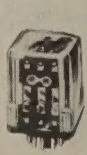
RR—Miniature version of the above, but furnished as 4PDT with 3 amp contact rating. Same physical size as RA relay. Enclosed in dust cover.

STEPPING SWITCHES



RTM—A miniature plug-in, high speed stepping switch ideal for use where economy of space and price is important. 2 pole 10 or 2 pole 12 position, gold plated contacts mate with socket which terminates on printed circuit spacing. Coil voltage from 12 to 110 VDC. Enclosed in dust cover. Dimensions: $1\frac{5}{8}$'' L x $\frac{13}{16}$'' W x $\frac{15}{16}$'' H.

SENSITIVE RELAYS



CSD/CMD—Mechanical construction similar to CA or CAD types but with sensitivity ranging from 40-300 MW and 250 MVA. Max. 3PDT. Coil voltage from 5-200 VAC and 4.9-100 VDC.

A complete variety of relay dust covers, plugs and sockets.

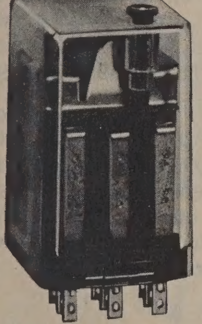
Write for catalogs and discount schedules.

SCHRACK ELECTRICAL SALES CORPORATION 1140 BROADWAY, NEW YORK, N.Y. 10001

General Purpose Relays

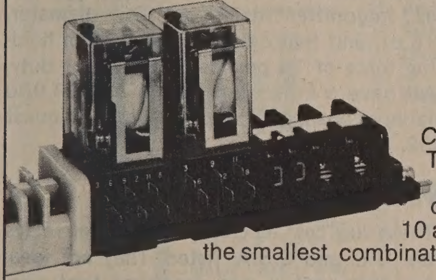
Type K

Extended relay life.
New standard of reliability.

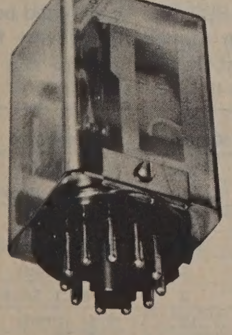


Variety of terminations. 2PDT or 3PDT. AC or DC operation. 10 amp contacts. Options include pilot light and manual operator.

Socket Mounted Version
The Type K general purpose relay is designed for multi-pole switching below 150 volts. Its small size makes it perfect for industrial or commercial control equipment. Troublesome solder connections and pigtail wires have been eliminated to give you an extremely reliable device.



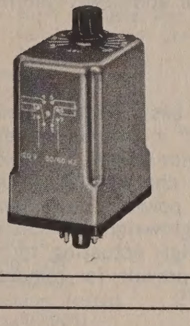
Compact Mounting
Takes up less than 3 square inches of panel space . . . 10 amp relay/socket the smallest combination on the market.



Tube-Type Version
Designed to fit all standard 8 or 11 pin sockets. Interchangeable with other tube-type general purpose relays.

Type J Timing Relay

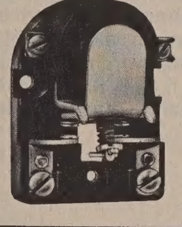
Integral Type K relay and solid state timing circuit.



Solid state timing relays give ±1% accuracy. .05 to 180 sec. knob adjustable, factory fixed or external resistor adjustable. 150 volt. 10 amp DPDT output contacts. Plug-in tube-type mount.

Type C

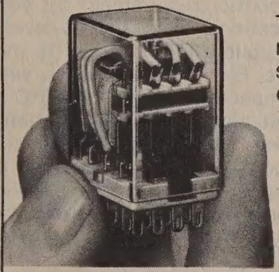
Most available relay.
Low cost.



600 volts maximum. Rated up to 1½ HP. 1 or 2 poles. Stocked by over 400 distributors.

Type R

the dependable miniature relay.



The new Type R miniature relay from Square D is very small, but very superior. It is designed to deliver reliable performance over an extremely long life.

It is the only one to offer all this:

1. Quality inspection and testing before shipment for dependable operation from the start.
2. A standard polarity barrier between each pole which allows the relay to be used where opposite polarity is present on adjacent poles.
3. A complete line of relays and sockets—and we mean complete—which makes the Type R ideal in a wide variety of applications.

In addition you get: 4 poles; double-throw contacts; 5 amp rating at 120VAC; an optional manual operator and a pilot light.

World Wide Distribution
For complete listings, prices and application data, contact your nearby Square D field office.
Or, write Square D Company, Dept. SA,
Milwaukee, Wisconsin 53201.

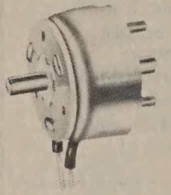
A COMPLETE LINE OF SOLENOIDS

ROTARY • ROTARY STEPPING SWITCHES • MAGTON HIGH RELIABILITY • LINEAR • TUBULAR-FLAT PACK • LAMINATED FRAME • BOX FRAME • OPEN FRAME

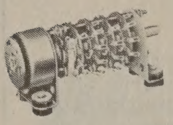
No matter what type of solenoid is best for your requirements, you'll find that Oak can supply it, because Oak makes them all! Contact the Oak field sales office listed in the directory section of **eem**, or your Oak distributor, for additional information or detailed catalogs.

ROTARY SOLENOIDS



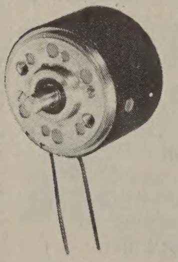
There are eight basic sizes available, from 1.156″ to 2.312″ in diameter. They can be supplied in a wide range of strokes, pulse times and other characteristics, depending on torque and power requirements. They are compact, lightweight devices, as compared to the high actuating torques and flexibility they provide for remote switching. Request Forms SP472 - SP479

ROTARY STEPPING SWITCHES



Using the eight sizes of rotary solenoids and combining them with Oak rotary switches results in an almost unlimited selection of stepping switches. As many as 60 poles, in 2, 3, 4, 5, 6, 8, 9, 10, 12, 16, 18, 20 and 24 throws can be provided. Request Form SP-228.

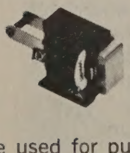
MAGTON* HIGH RELIABILITY ROTARY SOLENOIDS



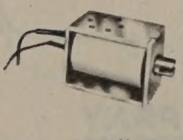
These unique rotary solenoids have an essentially unlimited life-approaching 100,000,000 operations. They will withstand the most rigid tests and will meet or exceed every quality control requirement for your severest applications. There are no levers, balls, cams or rollers to contribute to mechanical failure. Four standard series, with an ambient temperature range of −55°C to +80°C are suitable for most applications. Higher operating temperature coils, special mountings and assemblies and certification to government or military specifications can be supplied. Request Form F-980.

* Oak Industries Inc. is exclusive representative for Magnuson Engineers, Inc.

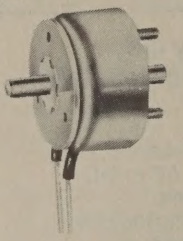
LINEAR SOLENOIDS



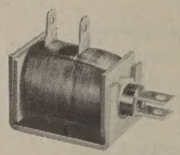
LAMINATED FRAME: These AC solenoids have a voltage range of 6 to 460 VAC, current range of 0.3 to 12 amperes. Maximum stroke is 1″, maximum force is 34 pounds at 10% duty cycle. They are designed for a 60°C temperature rise with continuous operation, 85°C for intermittent duty and can be used for push or pull. Request Form F-794. **Available for immediate delivery from Oak distributors.**



BOX FRAME: Designed for medium force and stroke applications, these low cost solenoids are produced in 9 basic sizes for both AC and DC operation. Weights range from 1½ to 20 oz., with coil watts at 25°C from 3 W to 15 W. Highly efficient design provides optimum combinations of pull and stroke for all standard AC and DC voltages. Request Bulletin F-656. **Available for immediate delivery from Oak distributors.**

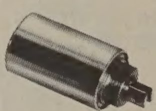


FLAT PACK: A full line of compact, highly efficient, steel enclosed solenoids that develop a very high force in relation to other sizes; for push or pull DC operation. Five basic types from 1.516″ to 2.312″ in diameter provide forces up to 85 pounds and strokes up to 0.400″ with speeds as fast as 2 milliseconds. Special shafts and retainers available. Request Forms F-926 to F-930.



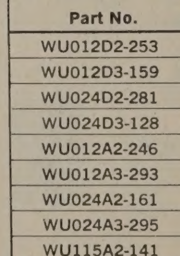
OPEN FRAME: These economical solenoids are ideal for both AC and DC applications involving limited power and stroke requirements. They are intended for operations requiring up to 20 ounces. Request Form F-971. **Available for immediate delivery from Oak distributors.**

TUBULAR SOLENOIDS



High efficiency solenoids for DC operation provide high force in a minimum of space. The Oak standard line consists of nine sizes, from a 7⁄16″ diameter unit weighing only ½ oz. with a maximum holding force of 18 oz., intermittent duty, to a 1½″ diameter, 18 oz. unit that develops a maximum holding force of 16 pounds, intermittent duty. All have a minimum life of 10,000,000 cycles and are available as push, pull or spring return. Request Forms F-428 to F-432.

TYPE "W" POWER RELAYS



These low cost, enclosed 25A power relays are U.L. and C.S.A. listed. They are ideal for automation and machine tool control, motor starting and heater circuits. A holding circuit type is also available. Minimum life expectancy is 100,000 cycles. Request Form F-889. The types listed below are **available for immediate delivery from selected Oak distributors.**

Part No.	Coil Nominal Volts	Coil Ohms	Mounting

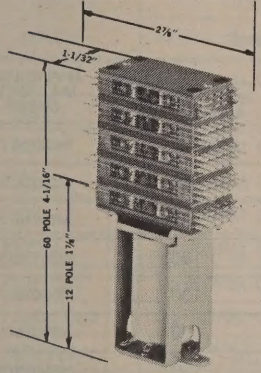
T-bar® RELAYS for Multipole High Density Switching

Switch from 4 to 60 circuits with only one T-Bar Relay. Available in configurations of 4, 8, 12, 24, 36, 48 and 52 poles with "A" or "C" contacts and 60 poles with "A" form contacts. For low level applications specify the 901 Series. For general purpose applications specify the 801 Series.

SPECIFICATIONS



Contacts:	Series 800—general purpose gold plated Series 900—low-level bifurcated gold plated
Contact Rating:	Series 800—5 amps max. resistive to 150 watts Series 900—1 amp max. resistive to 50 watts
Life Expectancy: at 20 CPM	Series 800—30,000,000 mechanical (latching limited to 1,000,000) 20,000,000 @ 100 mw 100,000 @ 5 amps 28 VDC Series 900—30,000,000 mechanical 20,000,000 @ 100 mw 100,000 @ 1 amp at 28 VDC
Contact Resistance:	20 milliohms typical
Ambient Temperatures:	—55° to plus 85°C
Terminals:	Mate with T-Bar Connectors
Dielectric Strength:	1000 VRMS @ 60 cycles/sec. (higher available)
Insulation Resistance:	5000 megohms min. (higher available)

Power @ 25°C:

Poles	Form	Watts
4, 8 or 12	A, B or C	3
24	A, B or C	3.4
36	A, B or C	5.2
48	A	5.2
48	B or C	6.5
52	A, B or C	6.5
60	A	6.5
4, 8 or 12	D	3.4
24	D	5.2
36	D	6.5

NOTE: On all latching standard pulse coil power is 6 watts, except on bifilar coils, which is 10 watts.

Operate and Release Time Typical (at nominal voltage 25°C):

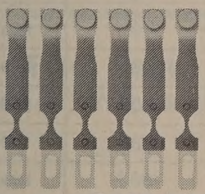
Operate (Refer to factory for faster operation):
4, 8 or 12 poles: 15 MS max.
24 poles: 25 MS max.
36 poles: 30 MX max.
48 poles: 35 MX max.
52 or 60 poles: 45 MS max.
For latching types: latch and unlatch times are 15 MS typical, all sizes.

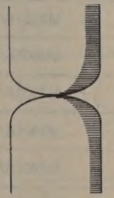
Release: 5 MS typical

Contact Bounce:
2 MS typical N.O. contacts
6 MS typical N.C. contacts
4 MS typical for latching units (both ways)

Take your choice of 2 contacts!

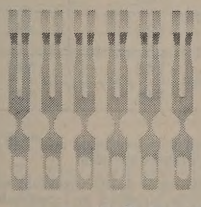
800 SERIES
for reliable General Purpose Switching





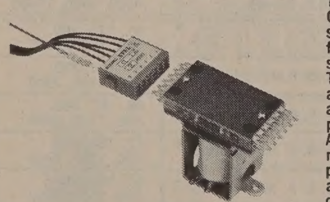
The 800 Series contact is a highly reliable gold-plated button contact. With its high contact pressure and positive wiping action, it is used in control type applications and in general purpose switching, such as relays, valves, lamps, etc. Contact Rating: up to 5 AMPS max.

900 SERIES
for reliable Low Level Switching



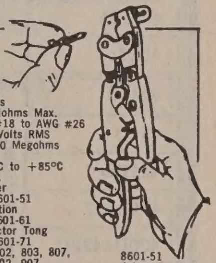
The 900 Series DATA-RITE™ contact has the reliability of a bifurcated contact with the added feature of two degrees of wiping action. The unique EDGE-TO-DOME contact guarantees a clean surface, which is critical for low level signals. The 900 Series is typically used in computer I/O signals; voice and data-grade communications; thermocouple and strain gauge outputs; all low level switching, whenever reliability is a premium, or whenever slight variations in contact resistance cannot be tolerated. Contact Rating: Microvolts up to 1 AMP max.

T-BAR CONNECTORS



The T-Bar Series 88601 Connector has been specifically designed for use with T-Bar switches and relays. The connector contacts are crimp type which are snapped into a plastic insulator block. After installation, connectors are held in place against shock and vibration by use of a retaining clip.

Current Carrying Capacity	5 Amps
Contact Resistance	5 Milliohms Max.
Wire Accommodated	AWG #18 to AWG #26
Dielectric Strength	1000 Volts RMS
Insulation Resistance	100,000 Megohms Min.
Ambient Temperature	—55°C to +85°C
Weight	0.3 Oz.
Recommended Tools	Crimper P/N 8601-51 Extraction P/N 8601-61 Connector Tong P/N 8601-71
Use 88601 With	801, 802, 803, 807, 901, 902, 907



8601-51 Crimping Tool

HOW TO ORDER

1. Specify Series **2.** Specify Number of Poles and Contact Form **3.** If A Relay, Specify Coil Voltage

Don't forget to order the mating T-Bar Series 88601 Connector! One for each 6 poles.

901 — **12 C** — **24**

SERIES	Application	No. of Poles	Contact Form*	Actuating Mechanism	Coil Voltage
801	General Purpose	4 to 52 60 Pole Unit "A" Form Only	"A" or "C"	CONTINUOUS DUTY COIL	6, 12, 24, 28, 48, 110 VDC 115 VAC
901	Low Level				
807	General Purpose	12 to 52	"C"	MAGNETIC LATCHING COIL (Pulse to latch, pulse in opposite polarity to unlatch.)	6, 12, 24, 28, 48, 110 VDC
907	Low Level				

*Form "A"— normally open contacts. Form "C"— double throw, break-before-make.

Manufactured under 1 or more of the following patents: 3206990, 3226508, 3689856.

TELEDYNE RELAYS

Military TO-5 Relays

The most versatile line of subminiature relays in the industry. Featuring all welded construction, hermetic sealing, and high force/mass ratios for excellent resistance to environmental extremes. Gold plated precious metal contacts assure reliable switching of loads from dry circuit to 1 ampere. Contact geometry and low inter-contact capacitance provide RF switching capability up to 500 MHZ. Most models qualified to MIL-R-39016, levels "L" and "M", or MIL-R-28776.

Available in following versions:

- **SPDT & DPDT,** with optional internal suppression and steering diodes
- **SPDT & DPDT Sensitive,** with optional internal suppression and steering diodes
- **SPDT & DPDT Hybrid** (both standard and sensitive coil versions) with internal transistor driver and suppression diode
- **SPDT, DPDT, & 4PST Magnetic Latching,** with optional internal suppression and steering diodes
- **SPDT & DPDT Bifilar**

Special models available on request.

General Specifications:
Contact Resistance: 0.1Ω max. initial/0.2Ω max. after life at max. load
Life: 100,000 operations @ max. rated contact load (life expectancy 10^7 operations at low level)
Temperature: −65°C to +125°C
Vibration: 30 g's to 3000 Hz.
Shock: 80 g's for 11 ms. (some maglatch models higher)

Terminal and Spreader Pad Options:

1. Standard terminal lengths: 1.5" (38.10 mm) wire leads or .187" (4.75 mm) pins (pin versions designed for use with plug-in sockets)
2. All models except 411 & 431 series (including D & DD versions) and 441 series can be supplied with spreader pads installed and cemented in place. Spreader pad P/N 192-10 for direct mounting on PC boards; P/N 192-59 designed for use with standard DIP sockets.

*Suffix D denotes internal suppression diode, DD suppression & steering diodes, and T transistor driver & suppression diode.

TELEDYNE RELAYS

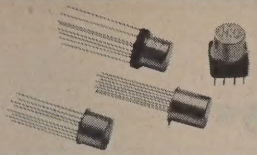
Detailed specifications on any of our products or a complete catalog are available on request.



TELEDYNE RELAYS

Commercial/Industrial TO-5 Relays

Low cost versions of DPDT MIL qualified TO-5 relays. Hermetic sealing, all welded construction, and gold plated precious metal contacts assure reliable switching of loads from dry circuit to 1 ampere. Contact geometry and low intercontact capacitance provide RF switching capability up to 500 MHz.

Available in following versions:

- **DPDT,** with optional internal suppression diode
- **DPDT Sensitive,** with optional internal suppression diode
- **DPDT Hybrid** (both standard and sensitive coil versions) with internal transistor driver and suppression diode
- **DPDT Magnetic Latching,** with optional internal suppression diodes

Special models available on request.

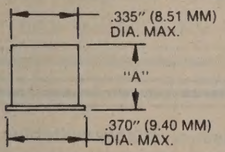
Spreader Pad Options:
All models can be supplied with spreader pad mounted and cemented in place. Spreader pad P/N 192-10 for direct mounting on PC boards; P/N 192-59 designed for use with standard DIP sockets.

*Ultra-sensitive 732-1000 series designed specifically for use in battery-operated radio transceivers.

General Specifications:
Contact Resistance: .100 Ω initial/.200 Ω max. after life at max. load
Life: 100,000 operations at max. rated load (life expectancy 10^7 operations at low level loads)
Temperature: −55°C to +71°C (operating)

TO-5 Relay Case Dimensions



RELAY SERIES	"A" DIM.	
	INCHES	MM
411 412	.265	6.74
421 420/422 712 720/722	.275	6.99
424A	.325	8.26
431 432 441 442 732	.375	9.53

Spreader Pads for TO-5 Relays

Preform and spread leads to grid patterns compatible with printed circuit board layouts and DIP sockets, with minimum additional profile height.

P/N 192-10

- Preforms and spreads leads to .200" X .300" grid at .100" spacing
- Serves as spacer and insulator for printed circuit board applications
- Simplifies insertion of leads into printed circuit boards
- Reduces stress on glass seals
- Aids visual inspection of solder flow
- Fits all TO-5 relays except 411, 424A, and 431 series (including D and DD versions) and 441 series. (See Note 2)

P/N 192-59

- Preforms and spreads leads to .300" grid at .100" spacing
- Designed for use with standard DIP sockets
- Fits the following TO-5 relay series: 412, 421, and 432 (including D and DD versions), 712 and 732 (including D versions), 411T, 431T, and 442 (See Notes 3 and 5)

P/N 192-67

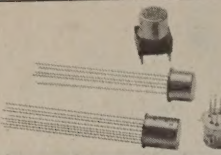
- Preforms and spreads leads to .200" X .300" grid at .100" spacing
- Fits the following TO-5 relay series: 411 and 431 (including D and DD versions), 441 and 424A (See Note 4)

Notes:

1. Relays can be supplied with spreader pads installed and cemented in place.
2. To order relays with 192-10 spreader pads installed, add M to part number (for example: 412D-26 with 192-10 pad installed is 412DM-26).
3. To order relays with 192-59 spreader pads installed, add M2 to part number (for example: 412D-26 with 192-59 pad installed is 412DM2-26). Leads are trimmed to .130" below pad for plugging directly into DIP sockets.
4. To order relays with 192-67 spreader pads installed, add M3 to part number (for example: 412D-26 with 192-67 pad installed is 412DM3-26).
5. Relays with 9 or 10 pins may be mounted on 192-59 spreader pad, but will not plug into standard DIP sockets.
6. Material: Diallyl Phthalate.

TELEDYNE RELAYS

3155 West El Segundo Boulevard, Hawthorne, California 90250 • Telephone (213) 973-4545



TELEDYNE RELAYS

High Environmental Military TO-5 Relays

412H Series — High Temperature (200°C)

Designed for reliable operation in elevated ambient temperatures up to 200°C. Special material selection and processing eliminate contact contamination and mechanical malfunctioning resulting from ambient temperature conditions in excess of maximum military temperature limits. Meets requirements of MIL-R-39016.

SERIES	CONTACT DATA		COIL DATA		
	ARRANGEMENT	MAX. RATING (AMPS @ 28 VDC)	NOMINAL VOLTAGE (VDC)	NOMINAL RESISTANCE (Ω)	MUST-OPERATE POWER (MW)
412H	2 FORM C	1	5, 6, 9, 12, 18, 26.5	50, 98, 220, 390, 880, 1560	130

412K Series — High Shock (4000 g's / .5 ms)

Designed to withstand shock levels up to 4000 g's/.5 millisecond duration. Special material selection and construction details provide assurance that critical elements of relay structure and mechanism will not be permanently displaced or damaged as a result of extremely high g level shocks. Meets requirements of MIL-R-39016.

SERIES	CONTACT DATA		COIL DATA		
	ARRANGEMENT	MAX. RATING (AMPS @ 28 VDC)	NOMINAL VOLTAGE (VDC)	NOMINAL RESISTANCE (Ω)	MUST-OPERATE POWER (MW)
412K	2 FORM C	1	5, 6, 9, 12, 18, 26.5	50, 80, 160, 300, 600, 1350	250

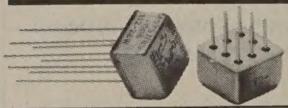
412V Series — High Vibration (250 g's)

Designed to withstand vibration levels up to 250 g's sinusoidal up to 2000 Hz. Magnetic circuit prevents contact opening (chatter) in excess of 10 microseconds under vibration or shock conditions. Meets requirements of MIL-R-39016.

SERIES	CONTACT DATA		COIL DATA		
	ARRANGEMENT	MAX. RATING (AMPS @ 28 VDC)	NOMINAL VOLTAGE (VDC)	NOMINAL RESISTANCE (Ω)	MUST-OPERATE POWER (MW)
412V	2 FORM C	1	5, 6, 9, 12, 18, 26.5	50, 70, 155, 235, 610, 1130	170

Notes (apply to all high environmental TO-5 relays):

1. Unless otherwise specified relays are supplied with 1.500″ (38.10 mm) leads. For .187″ (4.75 mm) pin versions, add "S" to part number (i.e. 412H-26 becomes 412HS-26).
2. Screened hi-rel versions are available on special order and can be supplied to meet the requirements of NASA MSFC Spec. 40M 37496 or NASA GSFC Spec. S-311-P-2(06).
3. All series can be supplied with spreader pads installed and cemented in place. Spreader pad P/N 192-10 for direct mounting on PC boards; P/N 192-59 designed for use with standard DIP sockets.



Centigrid® Military Relays

The smallest subminiature relay available. Low profile, .230" (5.72 mm) high by .370" (9.40 mm) square, with .100" grid spaced leads. Features all welded construction, hermetic sealing, and high force/mass ratios for excellent resistance to environmental extremes. Gold plated precious metal contacts assure reliable switching of loads from dry circuit to 1 ampere. Contact geometry and low inter-contact capacitance provide RF switching capability up to 500 MHz. All models qualified to MIL-R-39016, levels "L" and "M."

SERIES*	CONTACT DATA		COIL DATA			APPLICABLE MIL. SPEC.
	ARRANGEMENT	MAX. RATING (AMPS @ 28 VDC)	NOMINAL VOLTAGE	NOMINAL RESISTANCE	MUST-OPERATE POWER (MW)	
112	2 FORM C	1	5, 6, 9, 12, 18, 26.5	50, 98, 220, 390, 880, 1560	130	M39016/17
112D	2 FORM C	1	5, 6, 9, 12, 18, 26.5	50, 98, 220, 390, 880, 1560	130	M39016/18
112DD	2 FORM C	1	5, 6, 9, 12, 18, 26.5	39, 78, 220, 390, 880, 1560	130	M39016/19

General Specifications:

Contact Resistance: 0.1Ω max. initial; 0.2 Ω max. after life at max. load.
Life: 100,000 operations @ max. rated contact load (life expectancy 10^7 operations at low level)
Temperature: −65°C to +125°C
Vibration: 30 g's to 3000 Hz.
Shock: 75 g's for 6 msec. min.

***NOTE:** Suffix D denotes internal suppression diode, suffix DD suppression and steering diodes.

TELEDYNE RELAYS
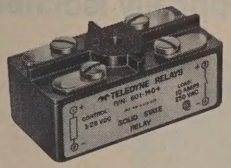
Solid State AC Relays

601-1400 Series — Optically Isolated



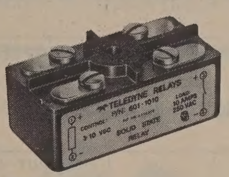
UL Recognized — File #59547

CSA Certified — File #31043

Solid state AC relays featuring LED optical isolation and synchronous/zero voltage turn-on. Available in 5 or 10 Amp steady state current ratings for 120 or 250 Volt loads (with peak ratings up to 600V). SPST, normally open. Choice of logic compatible 3-28 VDC or 90-250 VAC input. The versatile package design of the 601-1400 series provides choice of screw or quick-disconnect terminals for chassis or panel mounting, or solder pins for direct PC board applications. 1" (25.4mm) × 2" (50.8mm) × .9" (22.9mm) package size makes it the smallest 10 Amp solid state relay available.

INPUT (CONTROL) VOLTAGE	OUTPUT VOLTAGE RATING		OUTPUT (LOAD) CURRENT RATING & PART NUMBERS	
	CONTINUOUS VAC (RMS)	TRANSIENT VAC (PEAK)	5 AMP	10 AMP
3-28 VDC	140	200	601-1401	601-1402
	250	400	601-1403	601-1404
	250	600	601-1403H	601-1404H
90-250 VAC	140	200	601-1411	601-1412
	250	400	601-1413	601-1414

601-1000 Series — Transformer Isolated



Transformer isolated version of the 601-1400 Series. High input/output isolation (1500V/10⁹ Ohms) achieved through magnetic coupling. Asynchronous turn-on; zero current turn-off. SPST, available in 3 and 10 Amp ratings for 120 or 250 Volt loads. Features "adaptive" package design, providing choice of either screw or quick-disconnect terminals for chassis or panel mounting, or solder pins for direct PC board mounting.

UL Recognized — File #E47991

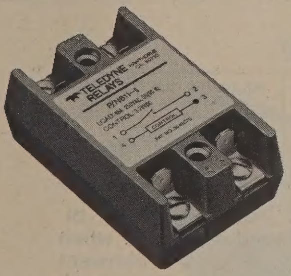
CSA Certified — File #31043

INPUT (CONTROL) VOLTAGE RANGE	OUTPUT CURRENT RATING AND PART NUMBERS	
	3 AMP	10 AMP
3-10 VDC	601-1007	601-1010
6-32 VDC	601-1017	601-1020
60-140 VAC	601-1027	601-1030

Basic part number provides screw terminals.
Add suffix "P" for PC board pins, "Q" for quick disconnect terminals.

611 Series — Optically Isolated

High power solid state AC relays, available in 10, 15, 25 and 40 Amp ratings, for 120 and 250 Volt loads (with peak ratings up to 600V). Features LED optical isolation and synchronous/zero voltage switching. High output dv/dt immunity -200 Volts/µsec. typical. Choice of logic compatible 3-28 VDC or 90-250 VAC input. Provided with multipurpose screw and quick-disconnect terminals.



UL Recognized — File #E55197

CSA Certified — File #31043

INPUT (CONTROL) VOLTAGE	OUTPUT VOLTAGE RATING		OUTPUT CURRENT RATING AND PART NUMBERS			
	CONTINUOUS (RMS)	TRANSIENT (PEAK)	10 AMP	15 AMP	25 AMP	40 AMP

TELEDYNE RELAYS

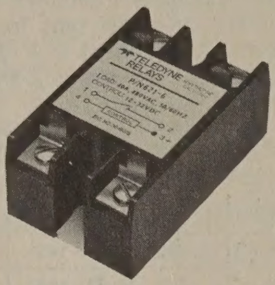
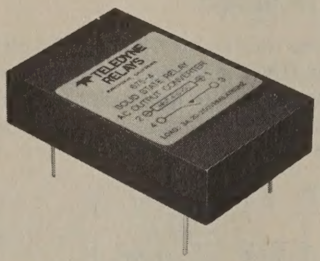
Solid State AC Relays



621 Series — High Voltage, Optically Isolated

Solid State AC Relays featuring 3750VRMS optical isolation and synchronous/zero voltage turn-on. Available in 15, 25, and 40 Amp steady state current ratings for 480 Volt loads (with peak ratings up to 800V). SPST, normally open. Choice of logic compatible 3-14 or 12-32 VDC input. Package design provides multi-purpose screw and quick-disconnect terminals. Designed to meet safety requirements of UL, CSA, VDE and IEC.

INPUT VOLTAGE RANGE	OUTPUT (LOAD) CURRENT RATING & PART NUMBERS		
	15 AMP	25 AMP	40 AMP
3-14 VDC	621-1	621-3	621-5
12-32 VDC	621-2	621-4	621-6



675 Series — Low Profile PC Board Relays

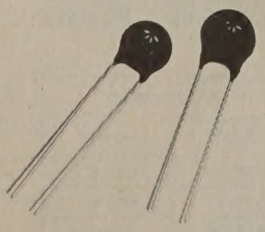
Optically isolated solid state AC relays featuring low profile package for PC board mounting. Maximum steady state load rating 3A/250VRMS. SPST, normally open. Control inputs are compatible with both low and high level logic systems.

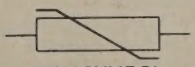
INPUT VOLTAGE RANGE	PART NUMBER	OUTPUT VOLTAGE RATING	
		CONTINUOUS (RMS)	TRANSIENT PEAK
4-10 VDC	675-4	250 VAC	400 VAC
	675-4H		600 VAC
10-32 VDC	675-5		400 VAC
	675-5H		600 VAC

UL Recognized — File #E55197
CSA Certified - File #LR31043-5

Metal Oxide Varistors (MOV)

970 Series





MOV SYMBOL

Teledyne 970 Series Metal Oxide Varistors (MOVs) are characterized specifically for use with Teledyne solid state AC relays and I/O converter modules for protection against high voltage transients that are prevalent on AC lines. MOVs are bi-directional voltage sensitive devices that assume a low impedance state when their design voltage threshold is exceeded. As such, they perform a transient voltage clipping or suppression function on the AC line similar to back-to-back zener diodes and are ideal for circuit protection use from the standpoint of performance, economy and ease of installation.

PART NUMBER	TRANSIENT (PEAK) RATING OF RELAY	MAXIMUM CONTINUOUS LINE VOLTAGE (RMS)
970-1	400 VAC	140 VAC
970-2	600 VAC	250 VAC

(Consult factory for information regarding MOVs with higher ratings.)

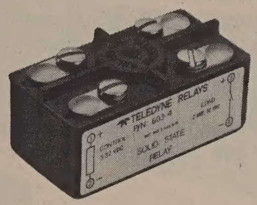
TELEDYNE RELAYS

3155 West El Segundo Boulevard, Hawthorne, California 90250 · Telephone (213) 973-4545

Detailed specifications on any of our products or a complete catalog are available on request.

TELEDYNE RELAYS
Solid State DC Relays

603 Series — Optically Isolated



Solid state DC relays featuring LED optical isolation. SPST, normally open. Available in 2 and 5 Amp steady state current ratings, up to 250 VDC. DC control inputs are compatible with both low and high level logic systems. As an added option, controlled rise and fall time is offered to limit in-rush currents for lamp loads and switching transients for inductive loads. Package configuration provides either screw or quick-disconnect terminals for chassis or panel mounting, or solder pins for direct PC board mounting.

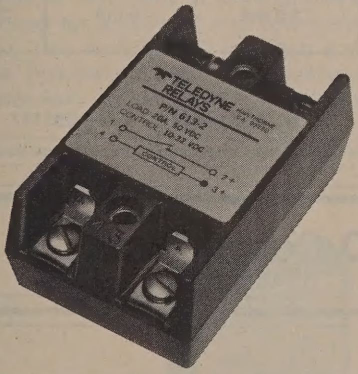
Size: 1" (25.4mm) X 2" (50.8mm) X .9" (22.9mm).

INPUT VOLTAGE RANGE	OUTPUT (LOAD) VOLTAGE RATING (VDC)	OUTPUT CURRENT RATING AND PART NUMBERS	
		2 Amp	5 Amp
3-32 VDC	50	603-1	603-2
4-10 VDC	250		603-3
10-32 VDC	250		603-4
90-250 VAC	50	603-11	603-12
3-32 VDC	50	603-21	603-22
		WITH CONTROLLED RISE AND FALL TIME	

Notes:

1. 603-3 and -4 utilize transformer isolation.
2. Basic P/N provides screw terminals. Add suffix "P" for PC board solder pins, suffix "Q" for quick disconnect terminals.

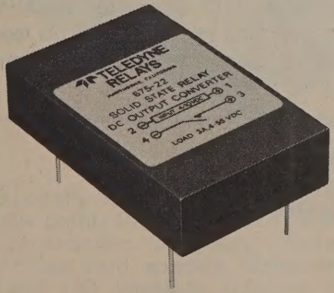
613 Series — High Current, Transformer Isolated



High current solid state DC relays featuring transformer isolation for low off-state leakage. SPST, normally open. 20A/50VDC maximum steady state load rating. Control inputs are compatible with both low and high level logic systems. Package design provides multipurpose screw and quick-disconnect terminals.

INPUT VOLTAGE RANGE	PART NUMBERS
4-10 VDC	613-1
10-32 VDC	613-2

675 Series — Low Profile PC Board Relays



Optically isolated solid state DC relays featuring low profile package for PC board mounting. 3A/55VDC maximum steady state load rating. SPST, normally open. Control inputs are compatible with both low and high level logic systems.

INPUT VOLTAGE RANGE	PART NUMBERS
4-10 VDC	675-22
10-32 VDC	675-23

TELEDYNE RELAYS

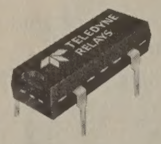
SERENDIP® Commercial/Industrial DIP Solid State Relays



Subminiature solid state relays in standard TO-116 DIP packages. Featuring all solid state circuitry with hybrid microcircuit construction, and high input/output isolation (up to 2500 volts/10^9 Ohms). Six models available providing choice of output: bipolar (AC or DC), AC (triac), and DC (transistor). Bipolar (640/644 series) and DC (643 series) are direct pin-for-pin replacements for standard DIP reed relays.

	INPUT DATA		OUTPUT (LOAD) RATINGS			
				CURRENT		
PART NUMBER	VOLTAGE (VDC)	MAX. CURRENT (MADC @ 5V)	AC/DC	@ 10V INPUT	@ 5V INPUT	VOLTAGE
640-1	3.8 - 10	22	BIPOLAR (AC or DC)	±80 mA	±40 mA	±50 V PEAK
641-1*	4 - 10	15	AC	0.5 A (Note 1)	0.5 A (Note 1)	140 V RMS
641-2*	4 - 10	15	AC	0.5 A (Note 1)	0.5 A (Note 1)	250 V RMS
643-1	3.8 - 10	15	DC	400 mA	200 mA	60 V DC
643-2	3.8 - 10	15	DC	100 mA	50 mA	250 V DC
644-1	3.8 - 6	18	BIPOLAR (AC or DC) (Note 2)	±5 mA	±5 mA	±5 V PEAK

Notes:
1. 1 Amp with standard DIP heat sink (Thermalloy P/N 6007A, or equivalent).
2. Features low offset voltage (100 microvolts typical).

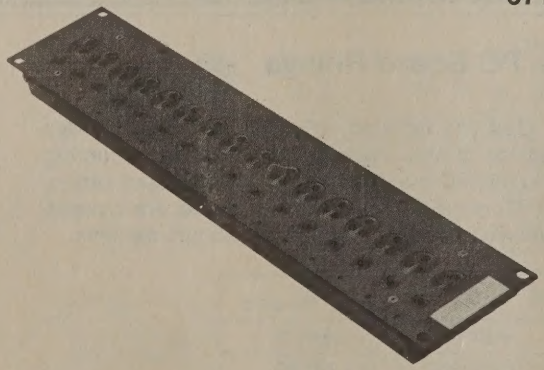
Mounting Panel For 671 I/O Converters

671P Series



Custom designed mounting panel for Teledyne 671 Series Solid State I/O Converter Modules. Fits standard 19″ rack and accepts up to 16 modules. Panel contains integral interconnect wiring for logic circuitry.

(See page 9 for description of 671 Series I/O Converter Modules.)

PART NUMBERING
- 671P-2 Rear mounted connector
- 671P-4 Top mounted connector

TELEDYNE RELAYS
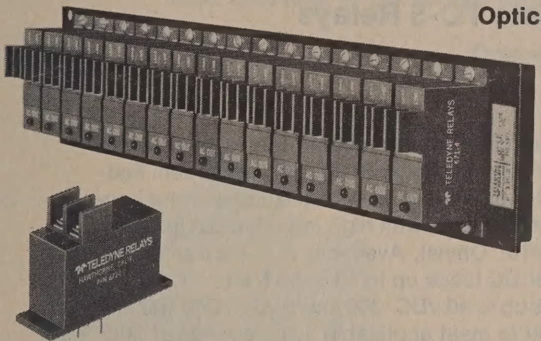
Solid State AC & DC I/O Converters

671 Series — Panel Mounted
Optically Isolated



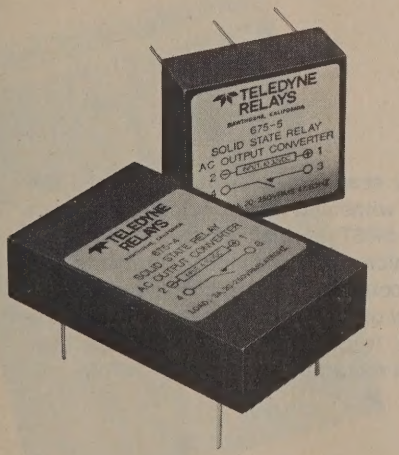
Designed for use in programmable controllers, computerized process control systems, machine tool controls, etc. All solid state circuitry — optically isolated — with high transient and noise immunity to withstand severe industrial environments without false triggering. Unique single circuit modular package design with logic terminals physically isolated from power wiring and high barriered power terminals providing for side by side panel mounting, thus eliminating the need for additional interconnecting terminal strips. This modular I/O interface concept facilitates installation and maintenance and offers substantially greater system flexibility when compared to conventional multicircuit PC card systems. Integral LED status indicators are included for easy troubleshooting. There are 9 different converter modules in the series as shown on the table.

P/N	DESCRIPTION	RATINGS
671-1	AC Input Converter	130 VAC Input
671-11	AC Input Converter	250 VAC Input
671-4	AC Output Converter (400V Peak Output Rating)	4-10 VDC Input 3 amps/250 VAC Output
671-4H	AC Output Converter (600V Peak Output Rating)	4-10 VDC Input 3 amps/250 VAC Output
671-5	AC Output Converter (400V Peak Output Rating)	10-32 VDC Input 3 amps/250 VAC Output
671-5H	AC Output Converter (600V Peak Output Rating)	10-32 VDC Input 3 amps/250 VAC Output
671-21	DC Input Converter	10-32 VDC Input
671-22	DC Output Converter	4-10 VDC Input 3 amps/55 VDC Output
671-23	DC Output Converter	10-32 VDC Input 3 amps/55 VDC Output

Notes:

1. AC Converters are color-coded Blue; DC Converters are color-coded Red.
2. For additional information on Series 671P Mounting Panel, see page 8.

675 Series — PC Board Mounted
Optically Isolated



PC board concept facilitates installation and maintenance. Utilizes all solid state circuitry — optically isolated — with high transient and noise immunity. There are 9 different converter modules in the series as shown on the table.

Functionally identical to 671 Series but featuring low profile PC board compatible potted module construction for greater packaging density and close card spacing. Designed to replace discrete I/O interface circuitry, this modular

TELEDYNE RELAYS
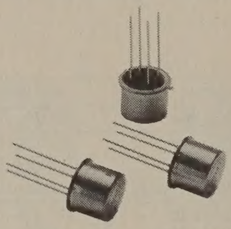
Military Solid State Relays

M640 Series Solid State TO-5 Relays

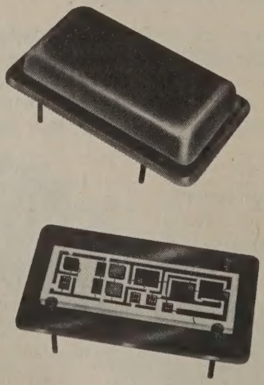


Hermetically sealed subminiature solid state relays in TO-5 package. SPST, normally open. Features all solid state circuitry utilizing hybrid microcircuit techniques, with high input/output isolation (1000 V/10^9 Ohms). Available with bipolar output for AC or DC loads up to 40 V/60 Ma or DC output for loads up to 40 VDC/300 Ma or 250 VDC/100 Ma. Designed to meet applicable requirements of MIL-STD-883 and MIL-R-28750/5, /6, and /7.

PART NUMBER	OUTPUT RATING
M640-1	40 V/60 MA (bipolar, AC or DC)
M643-1	40 VDC/300 MA
M643-2	250 VDC/100 MA

Model 683-1 — 600 MA/50 VDC Solid State DC Relay

Optically Isolated



Hermetically sealed in a low profile metal DIP enclosure to withstand Military and Aerospace environments. SPST, normally open. Features constant current microcircuit for input control and dual photo-voltaic couplers for high output current, together with low off-state leakage. Snap-action prevents damage from slowly ramped inputs. Designed to meet requirements of MIL-R-28750.

TELEDYNE RELAYS

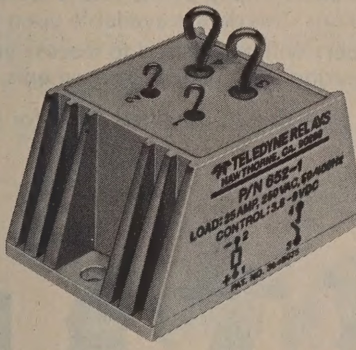
Military Solid State Relays

652 Series — 25 Amp/250 VAC Solid State AC Relays

Optically Isolated



TELEDYNE RELAYS
HAWTHORNE, CA. 90250
P/N 652-1
LOAD: 25 AMP, 250VAC, 45-440Hz
CONTROL: 3.8-9VDC
PAT. NO.

Hermetically sealed in a thermally efficient aluminium case to withstand Military and Aerospace environments. SPST, normally open. Features output switching by means of inverse/parallel SCRs for reliable operation over frequency range of 45-440Hz. Logic compatible drive circuit precludes need for external relay drivers. Synchronous/zero voltage turn-on to minimize RFI. Designed to meet the requirements of MIL-R-28750, and to operate within all categories of MIL-STD-704A Aircraft Power Limits.

INPUT VOLTAGE RANGE	PART NUMBERS
3.8- 9 VDC	652-1
9-32 VDC	652-3

VACUUM RELAYS

TORR . . . the famous name in vacuum

Torr Laboratories, Inc. is a major manufacturer of high voltage high vacuum relays in America today. Torr produces a broad line of high voltage relays from the low power to the megawatt range. Standard relays are available from stock. Special items and modifications are available for rapid delivery.

Torr supplies high voltage, high vacuum relays on an international basis for applications in sonar, telemetry, radar pulse networks, RF equipment, high voltage power supplies, electromedical devices and many other systems. Flexible manufacturing and research facilities provide quick reaction from the development of a special relay design to the final production product. Many of the relays shown meet MIL specifications. This data is available upon request.

- Our engineers will be pleased to discuss your specific engineering and system requirements.
- Relays are available to qualified users for test and evaluation.

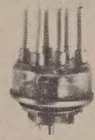
VACUUM RELAYS

TORR HIGH VACUUM RELAY ADVANTAGES

- HANDLE HIGH PEAK CURRENTS
- LONG LIFE WITHOUT CONTACT DEGRADATION
- ALL RELAYS VACUUMIZED TO BETTER THAN 10^{-9} TORR
- EXCELLENT FOR SEVERE ENVIRONMENTS
- IDEAL FOR HIGH DENSITY PACKAGING
- FAST RECOVERY FROM OVERLOADS



The Torr TMR-12 high-voltage relay was designed primarily for use in DC defibrillators. This new proprietary design is half the size and weight of typical defibrillator relays such as the TMR-10 shown in the inset below. This novel design does not require external protection to prevent breakage. It also has built-in re-entrant insulators which greatly improves arc resistance and external arc-over characteristics. The other electrical characteristics are the same as the TMR-10. The low contact bounce characteristics and small size makes this unit ideal for both portable and stationary defibrillator systems. Send for technical product data sheet.

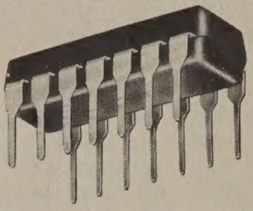
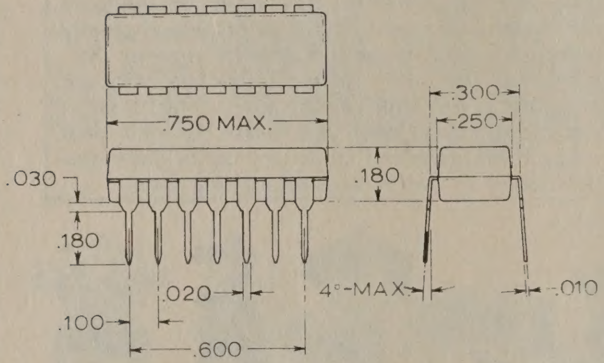
DIP PACKAGE DRY REED RELAYS

814 SERIES





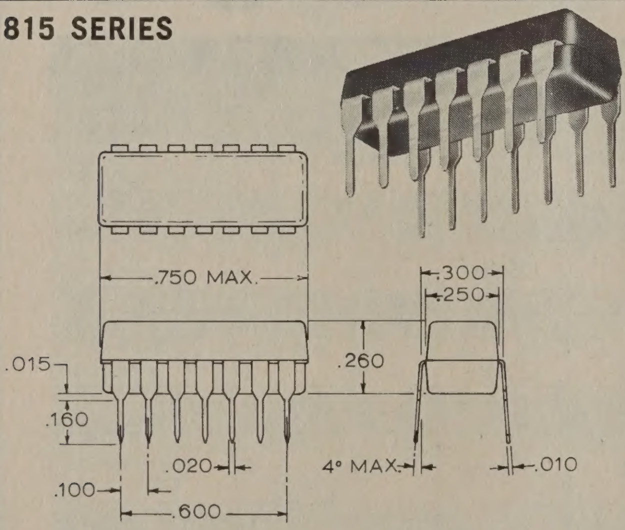
The 814 Series offers dry reed reliability and total isolation in a low profile IC type package, with DTL/TTL compatible coil drive available in most configurations.

SPECIFICATIONS — Contact Rating: 28 VDC or 0.110 Amps (switching); 3 watts; 200 milliohms max. initial contact resistance; 200 Volt pk. bkdn. **Temperature:** −55°C to +105°C. **Shock:** 100G max., 8±1 mSec. ½ wave. **Vibration:** 20G @ 10-5000 Hz. **Insulation Resistance:** 10^{10} Ohms min. **Capacitance:** 0.2 pf. **Operate Time (Typical):** to 0.5 mSec. **Release Time (Typical):** 0.1 mSec. **Life Expectancy:** 50 x 10^6 operations at signal level; 1 x 10^6 operations at rated load.

Contact Form	Nom. Voltage	Max. Voltage	Coil Resistance ±10% ▲	Part Number
1A	5	16	365	814-101
	5	19	500	814-102
	6	19	500	814-103
	12	24	800	814-104
	24	30	1,250	814-105

▲Measured at 25°C.

815 SERIES



The 815 Series, with a profile slightly higher than the 814, offers increased versatility while maintaining the DIP package approach to hi-density printed circuit applications. Standard part numbers listed are subject to specifications shown for the 814 Series, however, the 815 has the capacity to offer dry reed switches to ½ Amp rating plus up to a 100 VDC max. switching voltage. Optional features include diode suppression, magnetic shielding and electrostatic shielding.

Contact Form	Nom. Voltage	Max. Voltage	Coil Ohms ±10%▲	Part Number

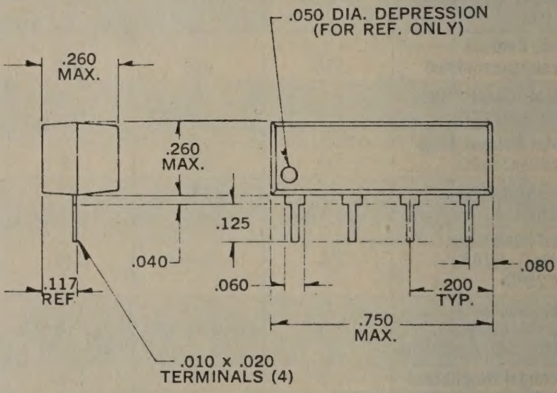
1C	5	8	80	815-241
	12	19	500	815-242
	24	38	2,000	815-243

816 SERIES



The 816 Series SIP (Single Inline Package) provides the power handling capabilities of the 815 DIP while taking up less printed circuit board space. Standard part numbers listed are subject to specifications shown for the 814 Series; however, the 816 has the capacity to offer dry reed switches to 0.5 amp rating. Optional features include diode suppression and magnetic shielding.

Note: Complete electrical data available on request.

822 Series relays can be provided that are recognized under the Component Program of Underwriters Laboratories, Inc. Please consult factory for more information.

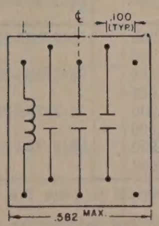
Special Coil Terminations available — consult factory.

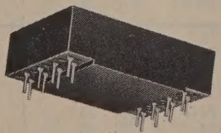
▲ Measured at 25°C.

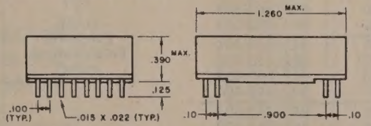
† All relays containing magnets for Form B operation (including the break-before-make 1C) are polarity sensitive and correct polarity must be observed. Dot on relays indicates positive terminal.

‡ A positive voltage must be applied to either dot terminal to close the contact(s) of a latch relay.
A negative voltage must be applied to either dot terminal to open the contact(s) of a latch relay.

824 SERIES RR







The 824 Series miniature reed relay is available in 1 pole through 6 pole standard configurations of forms A, B, or C, offering staggered pin spacing to minimize PC board space required. (3A pinout illustrated.) Call Wabash Relay for complete details.

SPECIFICATIONS — Contact Ratings: (max.) 200 VDC, 150 VAC, 0.5 Amp (switching), 3 Amp (Carry), 10 Watts DC, 25 V-A (AC suppressed), 300 Volts peak breakdown, 200 milliohms max. initial contact resistance. **Temperature:** −55°C to +105°C. **Shock:** 200 G max., 11±1 mSec. **Vibration:** 30 G max. @ 0 to 1700 Hz. **Insulation Resistance:** 10^9 Ohms min. **Capacitance:** 0.5 pf. **Life Expectancy:** 100 x 10^6 ops @ dry ckt.; 50 x 10^6 ops @ signal levels; 20 x 10^6 ops @ rated load.

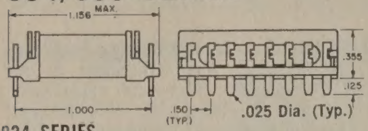
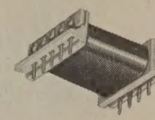
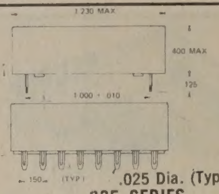
MINIATURE DRY REED RELAYS
834/835 SERIES*







SPECIFICATIONS — Contact Ratings: (max.) 200 VDC, 150 VAC, 0.5 Amp (switching), 3 Amp (Carry), 10 Watts DC, 25 V-A (AC suppressed), 300 Volts peak breakdown, 200 milliohms max. initial contact resistance. **Temperature:** −55°C to +105°C. **Shock:** 200 G max., 11±1 mSec. **Vibration:** 30 G max. @ 0 to 1700 Hz. **Insulation Resistance:** 10^9 Ohms min. **Capacitance:** 0.5 pf. **Life Expectancy:** 100 x 10^6 ops @ dry ckt.; 50 x 10^6 ops @ signal levels; 20 x 10^6 ops @ rated load.

†All relays containing magnets for Form B operation (including the break-before-make 1C) are polarity sensitive and correct polarity must be observed. Dot on relays indicates positive terminal.

‡A positive voltage must be applied to either dot terminal to close the contact(s) of a latch relay.
A negative voltage must be applied to either dot terminal to open the contact(s) of a latch relay.

ECONOMISER REED RELAYS 862-866 SERIES

CONTACT RATINGS (MAXIMUM)

SPECIFICATIONS — Voltage: 200 VDC, 150 VAC. **Current (Switch):** .5 Amp. **Current (Carry):** 3 Amps. **Power (DC):** 10 Watts. **Power (AC Suppressed):** 25 Volt-Amps. **Resistance (Initial):** 200 Milliohms. **Peak Breakdown Voltage:** 300 Volts.

OPERATING PARAMETERS

SPECIFICATIONS — Temperature: −40°C to 105°C. **Shock:** 50G max., 11 ±1 msec. **Vibration:** 20G max. at 0 to 1700 Hz. **Insulation Resistance:** 10^9 Ohms min. **Capacitance:** .5 Picofarad.

Nominal Coil Voltage	5.0	12.0	24.0
Must Operate Voltage*	3.8	9.6	19.2
Must Release Voltage*	.5	.9	1.9

Operate Time (Typ): 0.5 Milliseconds. **Release Time (Typ Unsuppressed):** 0.1 Milliseconds.

Note: All 862 and 866 Series Reed Relays are magnetically shielded unless specified by customer.
*At 25°C.

LIFE AND RELIABILITY*

Load	End-of-Life Criteria	Life
Rated Power	Weld or Greater of 2% of Load Resistance or 2 Ohms	20×10^6
High Intermediate	Weld or Greater of 2% of Load Resistance or 2 Ohms	20×10^6
Low Intermediate	Weld or 5% of Load Resistance	50×10^6
Low Level	Weld or 10% of Load Resistance	100×10^6

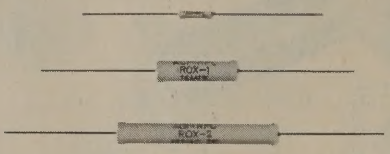
HIGH VOLTAGE, HIGH RANGE METAL OXIDE RESISTORS

Features

- Ranges to 20G ohms
- Voltages to 30KV
- Power Capability to 6.0 Watts
- Silicone or Epoxy Protective Coatings
- Temperature Coefficients to 0 ±50 PPM and Tolerance to ±1% Available
- Long Term Stability
- Flat Style Also Available



Applications

- Meter Multipliers
- Bleeder
- Voltage Dividers
- Dropping and Filter

CERMET CHIP RESISTORS

Features

- Designed to Meet MIL-R-55342
- Tolerances of 1%, 5% and 10%
- TC's of 0 ±200 PPM/°C Standard — Others Available
- Proprietary Precision Metal Cermet
- Alumina Substrate
- Solderable or Weldable Terminations
- Ranges to 1.0M
- Special Requirements Solicited

HIGH VOLTAGE CARBON FILM RESISTORS

ACI's line of High Voltage Carbon Film Resistors are designed for high voltage applications where high resistance and/or power are needed.

Features

- Ranges to 100T Ohm
- Tolerances to ±1%
- Voltage Capability to 125KV
- Numerous Styles and Interconnect Capability
- Types Available for High Frequency Applications
- Power Ratings to 100 Watts
- Military Styles Available (MIL-R-14293)

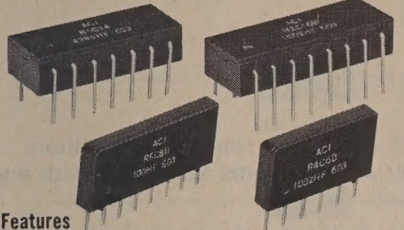
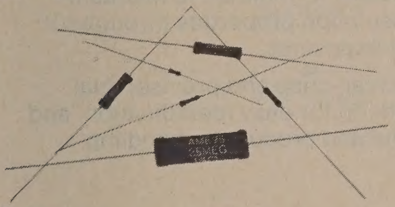
PRECISION DUAL-IN-LINE AND SINGLE-IN-LINE RESISTOR NETWORKS



Features

- Temperature Coefficients to 0 ±10 PPM/°C
- Tolerances to ±0.1%
- Resistance Range 49.9 Ohms to 200K Ohms
- Temperature Range −55°C to +125°C
- Reduces Inventory Count — Equipment Size

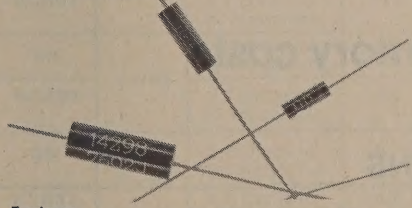
AME HIGH RANGE CONFORMAL COATED METAL FILM RESISTORS



Features

- Ranges to 50 Megohm
- Tolerances to ±0.1%, with ±1.0% Standard
- Shelf Life Aging of Less Than 0.1% per Year Typical
- Noble-Met® Film with Inherently Low Noise
- Sizes from $^1/_{20}$ Watt to 1.0 watt
- Meet or Exceed Requirements of MIL-R-10509 and MIL-R-55182

UAR* PRECISION METAL FILM RESISTORS



Features

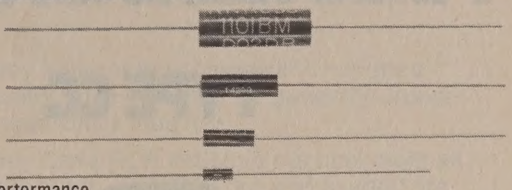
- Temperature Coefficients of 0 ±5 PPM Standard
- Tolerances to ±0.1%
- Range from 20 OHM to 1 Megohm
- Operating Temperature Range −20°C. to +85°C.
- Temperature Coefficient and Tolerance Matching
- Replacements for Precision Wirewounds

*Ultra Accurate Resistors

Typical Performance

Load Life: 1000 hrs. @ 85°C	.03% △R
Temp. Cycle: −55°C to +85°C	.02% △R
Humidity: MIL Std. 202, Method 106	.02% △R
Noise Index	<.05 μV/V
Voltage Coefficient	.02 PPM/Volt
Short Term Overload: 2.5x Rated Volt, 5 Sec.	.05% △R
Low Temp. Operation: −65°C @ Rated Load	.02% △R

ESTABLISHED RELIABILITY PRECISION METAL FILM RESISTORS — TO MIL-R-55182 RNC, RNR, RNN SERIES



Features

- Tolerances of ±1%, ±.5%, ±.1%
- S Failure Rate Level
- Extended Resistance Ranges
- Molded for Optimum Environmental Performance
- Solid Core Construction for Extreme Sheer Strength

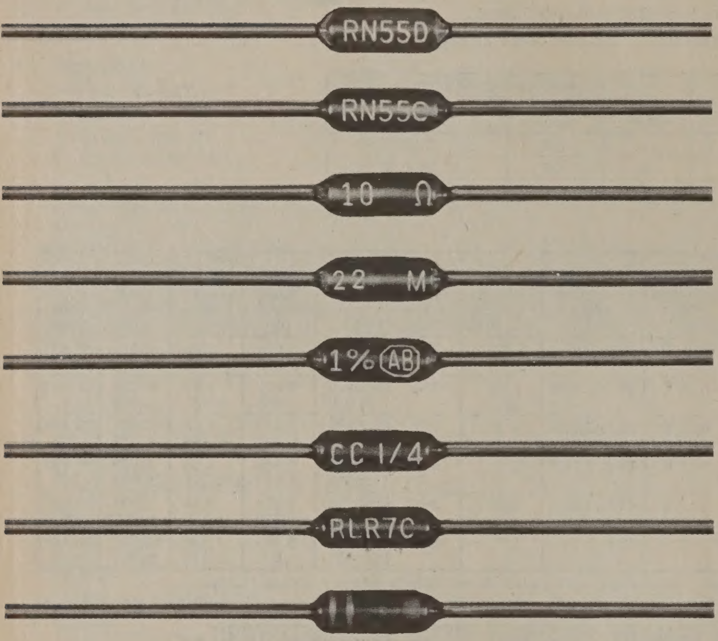
Leads are OFHC tinned copper.

Allen-Bradley Cermet Film Fixed Resistors

TYPE CC



Capless design provides a reliable termination that does away with problems associated with end cap construction.

Leads are designed for both soldering and welding to give you freedom of choice about attachment, and long term storage capability.

Cores are high purity alumina with outstanding physical and thermal properties to reduce the incidence of fractures.

Coating is specially formulated to maintain outstanding insulation properties throughout environmental exposures.

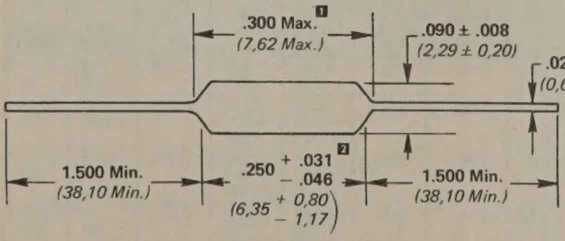
Markings are clear, crisp and precise; dual resistance marking for easy identification, and durable to withstand production handling.

For more information request Publication EC33.

This one resistor can shrink your inventory costs

DIMENSIONS

Basic dimensions in inches. Dimensions shown in *ITALICS* are in millimeters.



1 Maximum length is "clean lead" to "clean lead"

2 The end of the body is that point at which the body diameter equals .038 *(0,97)*

SPECIFICATIONS

Resistance Range	10 Ohms to 22 Megohms

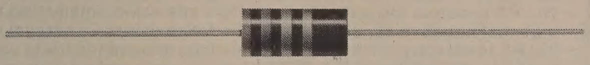
Allen-Bradley Hot-Molded Fixed Resistors



HB—RCR42

GB—RCR32

EB—RCR20

CB—RCR07

BB—RCR05

Allen-Bradley hot-molded composition resistors are high quality units intended for general purpose use in the electronics industry.

Allen-Bradley Style RCR resistors not only meet all requirements of MIL-R-39008 but also exceed the S level (best level) of Established Reliability of 0.001% failure rate per 1000 hours. And only Allen-Bradley resistors are available in S level reliability in all five wattage sizes over the entire resistance range. The S reliability level is indicated by a yellow 5th color band on the resistor body.

Metal-clad hot-molded resistors (Types GM and HM) are fitted with metal clamps which surround the major portion of the resistor. The metal clamps provide rigid mounting and efficient heat transfer from the resistors to the metal chassis or panels on which they are mounted.

For more information request Publication EC21.

HOW TO ORDER

Example: Require Series 314A with resistance value=1000Ω.
Order part #314A102.

± 1% TOLERANCE

The values marked with an asterisk of Series 314A, 314B, 316A and 316B in the table above are available with ±1% tolerance. Add the letter "F" on the end of the part number to indicate the optional ±1% tolerance.

STANDARD NETWORKS • PARALLEL • TERMINATION

APPLICATIONS:

Series 314E and 316E networks are used in digital IC logic circuits and are especially suited for ECL and TTL applications. For ECL applications the network's circuit configuration serves a dual purpose. The R2 resistors are pull-down resistors and are normally tied to the most negative supply voltage. The R1 resistors, in parallel with the R2 resistors, provide the characteristic impedance for proper transmission line matching. In TTL logic the networks are used in pulse squaring applications.

STANDARD NETWORKS • SENSE AMP • INTERFACE

APPLICATION:

- Designed for use with 7520 series core memory sense amplifiers.
- Series 314M110 combines a threshold setting divider with balanced sense line termination and far end termination of two sense lines.
- Series 314M120 and 314M125 combine threshold setting dividers with four sense line termination. Following resistor values provide different threshold setting:

314M130

STANDARD "O" PAD (BALANCED π) ATTENUATORS

APPLICATIONS:

These networks are used primarily in the communications industry where a fixed voltage attenuation is required with impedance matching. Voltage attenuation in steps of 0.5 dB from 0.5 dB to 31.5 dB can be obtained from the Series 314Z networks by the use of one "O" pad, or by placing two or more in series. For example, 20 dB is obtained by placing the 4 dB and 16 dB sections in series.

SPECIFICATIONS:

Characteristic Impedance	600 ohms
Attenuation Tolerance (dB)	±1%
Attenuation Change Due to Temperature	±1% Additional
Resistor Tolerance	±1%
Temperature Coefficient of Resistance	±200 ppm/°C
Power Dissipation Rating at 40°C	150 mw per Attenuator
Frequency Response	Flat to 1 MHz
Operating Temperature	0°C to +70°C

(1) May be used with Fairchild 3750/3751 IC

VOLTAGE DIVIDER NETWORK

(Decade Attenuator)

APPLICATIONS:

- FN207—Input attenuation and range selection in digital instrumentation, particularly in digital voltmeters and multimeters.

Resistance Tolerance on Total Resistance (R_T) at +25°C: $R_T = R_1 + R_2 + R_3 + R_4 + R_5 = 10$ Megohms ±0.05%.

Ratio Tolerance at +25°C and from 0 to 1000 volts:

$$\frac{R_1 + R_2 + R_3 + R_4}{R_T} = \frac{1 \text{ Megohm}}{10 \text{ Megohms}} = 0.1 \pm 0.03\%$$

$$\frac{R_1 + R_2 + R_3}{R_T} = \frac{100 \text{ K ohms}}{10 \text{ Megohms}} = 0.01 \pm 0.03\%$$

$$\frac{R_1 + R_2}{R_T} = \frac{10 \text{ K ohms}}{10 \text{ Megohms}} = 0.001 \pm 0.03\%$$

$$\frac{R_1}{R_T} = \frac{1 \text{ K ohm}}{10 \text{ Megohms}} = 0.0001 \pm 0.03\%$$

Temperature Coefficient of Resistance	±25 ppm/°C
TCR Tracking	±5 ppm/°C
Operating Voltage (between pins 1 & 6)	1000 volts max.
Operating Temperature	0°C to +70°C
Storage Temperature	−65°C to +175°C

FN207

CURRENT SUMMING NETWORKS PRECISION RESISTOR ARRAYS

APPLICATIONS:

- A/D and D/A conversion.
- FN111*—10 bit binary operation.
- FN112*—3 place BCD operation (0 to 399).
- FN215—12 bit conversion—designed for use with Fairchild μA9650 IC.
- FN226**
- FN227**

*Both designed for use with Fairchild μA722 IC.

**Both designed for use with Intersil ICL 8018, 8019, 8020 IC's. FN226 gives 8 bit conversion. FN226 plus FN227 gives 12 bit conversion.

ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKATALOG FÜR ELEKTRONIKER

The book is out...and the response is in...

IMMEDIATE AND OVERWHELMING

ACCEPTANCE

ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER

The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to - and from - Western Europe and the United Kingdom.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 products alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe and the United Kingdom. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

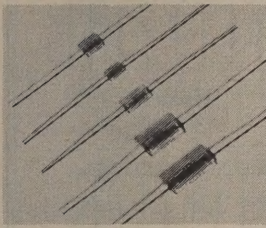
PRECISION METAL FILM RESISTORS

Hermetically Sealed per MIL-R-55182 Characteristics C and E
Hermetic Glass-to-Metal Seal — Failure Rates M (1%) thru S (0.001%)



FEATURES

- High stability
- Hermetic enclosure
- Inert gas environment
- In accordance with MIL-R-55182, Styles RNR and RNN
- Extended life and reliability
- 1/10, ⅛, ¼, ½ watt sizes (5 case sizes)

APPLICATIONS

Aerospace, military, oceanography . . . wherever the application or environment demands the ultimate in resistor reliability, Angstrohm's hermetically sealed metal film resistors are unquestionably first-choice. The HN glass-to-metal hermetic seal protects the resistance element from virtually any adverse environmental influence, and will withstand in excess of 3,000 p.s.i. external pressure without leakage.

SPECIFICATIONS

MIL-Specifications: RNR/RNN style resistors are designed to exceed the requirements of MIL-R-55182 for characteristics C and E.

Power Rating: All RNR/RNN resistors are based on full rated load at an ambient of 125°C.

Resistance Tolerances: The standard resistance tolerances are ±1.0% (F), ±.5% (D), and ±.1% (B) per Q.P.L. 55182. Consult factory for tighter tolerances and special matching.

Resistance Values: See Table 1 for range of resistance values. Standard values can be obtained from the resistance decade shown in Table. 2.

Derating: For ambients above 125°C, see Derating Curve.

Applied voltage shall not exceed $\sqrt{PR}$. See Table 1.

RATINGS AND DIMENSIONS

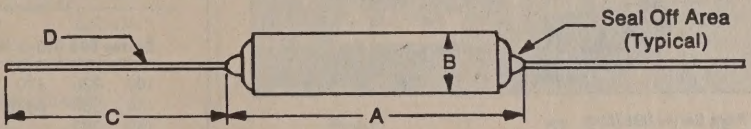


TABLE 1

Designations		Watt Rating @125°C	Volts Max.	Resistance Range in Ohms†		Approx. Dimensions (in inches)				Weight GMS (approx.)

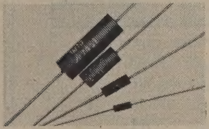
*See Lead options under "Characteristics" below.
† Consult Factory for extended ranges.

series SAR* precision metal film resistors



Angstrohm "SAR" thin metal film resistors are designed for hi-reliability, hi-precision, and long life applications and exceed the specifications and performance requirements of MIL-R-55182 and MIL-R-10509. The latest state-of-the-art materials and methods are utilized in their manufacture including improved metal film deposition technology, laser helixing, special moisture resistant undercoatings and flame retardent vacuum transfer molding.

The "SAR" resistor is ideal for high frequency and pulse applications requiring low reactance, low noise (−40 db typical) and low voltage coefficients (.02PPM/volt typical). "SAR" resistors are also capable of withstanding pulse overloads of up to fifty times rated power for 500 msec.

* Super Accurate Resistor

BECKMAN®

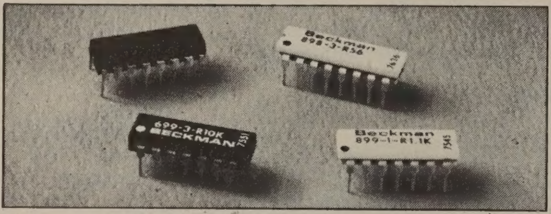
Save time, space and money with . . . RESNET™

THICK and THIN FILM RESISTOR NETWORKS

Beckman RESNET™ thick or thin film dual in-line, thick film single in-line, flatpack and custom resistor networks consist of various resistor configurations packaged in standard 14- and 16-pin DIPs, 6-, 8- and 10-pin SIPs, and 14- lead flatpacks. All offer:

- Significant reduction of "on the board" costs
- Space savings over individual resistors
- Significant reduction of procurement, inventory and quality control costs.
- Compatibility with automatic insertion equipment

DIP RESISTOR NETWORKS



Thick Film Series 899/898

- 14-pin (899) and 16-pin (898) configurations
- Automatic insertion compatible
- Thick film reliability and performance
- ±2% (or ±2 ohms) resistance tolerance
- 0.15W (898/899-1, -5) or 0.250W (898/899-3) resistor power rating (+25° C)

Precision Thin Film Series 698/699

If your application requirements call for greater circuit stability than unmatched individual discrete resistors and tighter accuracy tolerances than thick film resistor networks, consider our precision film resistor networks. Series 698 and 699 feature:

- Low cost—from 65¢ at 1,000 piece price
- ±5 ppm/°C tracking
- Absolute resistance tolerance options from ±0.1% to ±1.0%
- ±50 ppm/°C tempco
- −40dB max. noise
- Negligible resistance voltco

CUSTOM NETWORKS

Need something special? We can build practically any kind of network you require . . . fast.

Our large staff of applications/design specialists — all heavy in experience — can mix resistance values on the same substrate. Or give you capacitor networks, diode networks, resistor/capacitor or resistor/diode combinations. Even shorting bars.

To order, or for more information and free evaluation samples, call your nearest Beckman/Helipot distributor. Or phone (714) 871-4848, Ext. 1776.

Prices and specifications subject to change without notice.

HFJ	40,000	10	6½	9/16	1M	100T	1, 2

Standard Tolerances are 20%, 15%, 10% and 5% for the SF and SJ Series and 10%, 5% and 3% for the HF Series.

Resistors of greater than 10G, are provided with special coating to minimize effects of handling and humidity, no change in diameter.

All Dimensional Tolerances ±1/64 or 1% whichever is greater.

If units are to be operated near maximum limits, at elevated ambient, or in a coolant, order resistors without sleeving.

Special values or configurations are available upon request from Beman Manufacturing, Inc.

Special coatings available upon request.

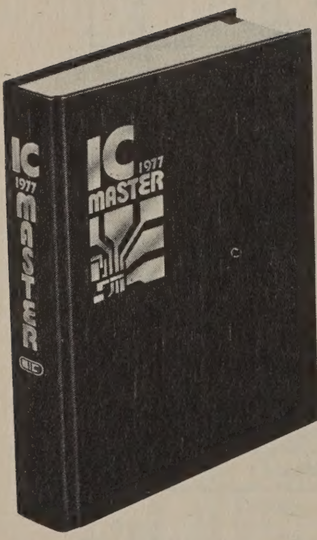
WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

DIP RESISTOR NETWORKS

ISOLATED AND BUSSED RESISTOR CIRCUITS

BOURNS®

HOW TO ORDER

Example—A 16-pin, 15-resistor DIP network, 22K ohms per resistor is Model 4116R-002-223. The last three digits are the code for the resistance value—the first two digits designate the significant numbers (22), and the last digit gives the number of zeros that follow (3). So, -223 translates to 22,000 ohms.

STANDARD RESISTANCES

Resistance (ohms)	Resistance Code	Resistance (ohms)	Resistance Code
33	-330	330	-331
39	-390	390	-391
47	-470	470	-471
56	-560	560	-561
68	-680	680	-681
82	-820	820	-821
100	-101	1000	-102
120	-121	1200	-122
150	-151	1500	-152
180	-181	1800	-182
220	-221	2000	-202
270	-271	2200	-222

Standard Resistance Tolerance is ±2% or 2Ω, Whichever Is Larger

Resistance (ohms)	Resistance Code	Resistance (ohms)	Resistance Code
2700	-272	27000	-273
3300	-332	33000	-333

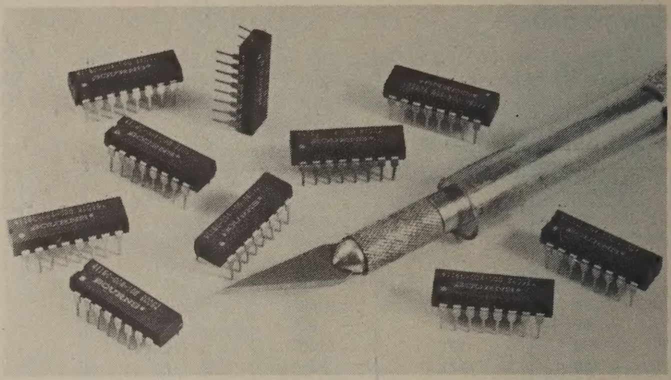
DIP RESISTOR NETWORKS

**ECL TERMINATORS WITH
DECOUPLING CAPACITOR**

BOURNS®

FEATURES

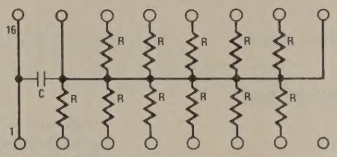
- *Reduces P.C. board space*
- *Reduces total assembly costs*
- *Standard DIP package is compatible with automatic insertion equipment*
- *Uniform performance characteristics*
- *Compatible with ECL pin configurations*
- *Krimp-Joint™ construction for extra reliability*



—2.0 VOLT ECL TERMINATOR 16 PIN DUAL-IN-LINE PACKAGE

MODEL 4116C-004

The BOURNS® Model 4116C-004 Resistor Network is designed for ECL line termination to a —2.0 volt buss. An .01 microfarad decoupling capacitor bypasses transients between supply voltages. Replaces the Beckman 898-41.



Resistance (Ohms)	Part Number
50 ± 2Ω	4116C-004-500

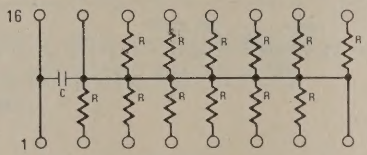
MODEL 4116C-005

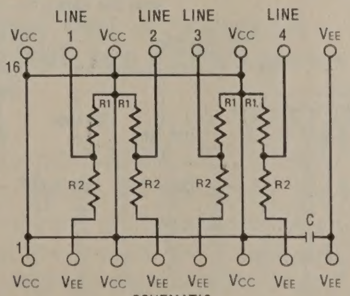
The Model 4116C-005 Resistor Network is designed for ECL pull down to a —5.2 volt buss. A .01 microfarad decoupling capacitor bypasses transients on the supply voltage buss. Replaces the Beckman 898-42.



Resistance (Ohms)	Part Number
510 ± 2%	4116C-005-511

THEVENIN EQUIVALENT TERMINATOR 16 PIN DUAL-IN-LINE PACKAGE

MODEL 4116C-006



SCHEMATIC

The BOURNS® Model 4116C-006 Network provides four Thevenin equivalent terminator sections in a compact 16-pin DIP configuration. The 4116C-006 is compatible with ECL pin configurations.

Each terminator section contains a voltage divider between Vcc and Vee providing a Thevenin equivalent voltage of —2.0 volts. A .01 microfarad decoupling capacitor bypasses the —5.2 volt buss. The 4116C-006 replaces the Beckman 898-43.

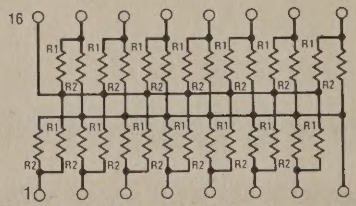
DUAL LINE TERMINATOR
14/16 PIN DUAL IN-LINE PACKAGE

MODEL 4114R-003
MODEL 4116R-003



The BOURNS® Models 4114R-003 and 4116R-003 Resistor Networks are designed for TTL dual line termination. These models improve noise immunity where capacitive effects are excessive. The 4114R-003 network is a standard 14 pin DIP configuration and terminates 12 lines. The 4116R-003 is a 16 pin DIP configuration and terminates 14 lines.

The dual terminators consist of 24 (4114R-) or 28 (4116R-) thick film resistors. Pins 7 (or 8) and 14 (or 16) are common for ground and power respectively. Each series-pair of resistors is connected between the common lines. The center of these resistor pair are connected to input terminals. Replaces the Beckman 899/898-5, the CTS 760/761-5, the Sprague 914/916C-5TR networks, and the Allen-Bradley 34E/36E networks.

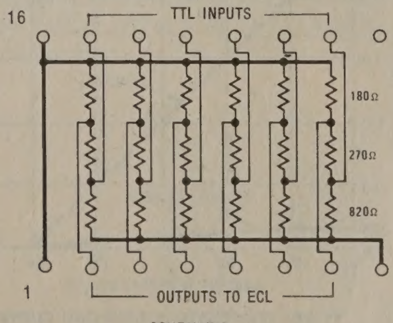
TTL TO ECL TRANSLATOR
16 PIN DUAL-IN-LINE PACKAGE

MODEL 4116R-008



SCHEMATIC

The BOURNS® Model 4116R-008 Resistor Network provides translation from TTL to ECL integrated circuit logic. It is packaged in a standard 16 pin DIP configuration, with 18 thick film resistors interconnected as illustrated.

The translator design assumes both TTL and ECL are operating between a +5 volt power supply and ground. Six line capacity is provided in the 16 pin configuration. Replaces the Beckman 898-45 and the CTS 761-45.

SCHEMATIC

BOURNS® Model 4114R-009 Resistor Network is designed to provide threshold reference settings and balanced sense line termination for two 711 dual comparators . . . in core memory sense sense amplifier applications. The 4114R-009 is packaged in a compact 14 pin DIP configuration, utilizing Bourns ultra-reliable Krimp-Joint™ termination design.

In use, threshold voltage settings are established by the voltage drop across the 20 ohm resistors (20mv. at + V adj. of 12.14 volts). Sense line termination is 120 ohms. Replaces the Beckman 899 19 and the CTS 760-19.

220	330	4308R-103-221/331

Special resistance values are available.

The Model 4308R-103 Molded Resistor Network is a unique offering from Bourns. It provides TTL dual line termination in a low-cost epoxy molded, SIP configuration. Dual terminators improve noise immunity where capacitive effects are excessive.

The 4308R-103 is an 8 pin configuration and terminates 6 lines. Pins 1 and 8 are common for ground and power, respectively. Twelve thick film resistors are paired in series between the common lines (pins 1 and 8). The center points of these resistor pairs are connected to input terminals (pin 2 through 7) Dual terminators are also available in standard 14 pin and 16 pin DIP models from Bourns.

SIP RESISTOR NETWORKS

BOURNS®

HOW TO ORDER

Example—An 8-pin, 12-resistor SIP Dual Terminator, with 220 ohms and 330 ohms values would be designed as: Model 4308R-103-221/331. The set(s) of 3 digits following the model number are the codes for resistance value—the first two digits designate the significant numbers (22) and (33) respectively, and the last digit gives the number of zeroes that follow (1). So, -221 translates to 220 ohms and 331 to 330 ohms.

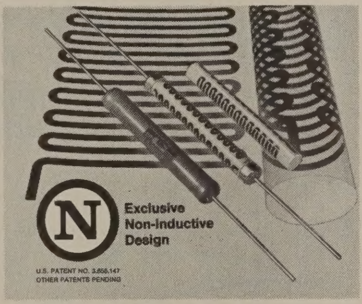
CADDOCK
HIGH PERFORMANCE FILM RESISTORS

High Performance Power Film Resistors

In 1962 Caddock Electronics introduced their axial lead resistors constructed with Micronox® resistance films. This advanced resistor technology has produced an extensive line of precision resistors with a combination of performance advantages:

- **Higher Power Ratings** — up to five times higher than other resistor technologies.
- **Higher Operating Temperatures** — up to +275°C.
- **Higher Resistance Values** — up to 10 times higher than other types of high precision resistors with matched temperature coefficients and standard configurations.
- **Exceptional Extended-Life Stability** — typically better than 0.01% per 1000 hours in extended life.
- **Improved Temperature Characteristics and Stability** — with lower temperature coefficients and closer TC matching.
- **Non-Inductive Design for Wide-Band, High Frequency Applications.**

Caddock's Exclusive Non-Inductive Design is also available in most models of Micronox® resistors. This special serpentine pattern provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.



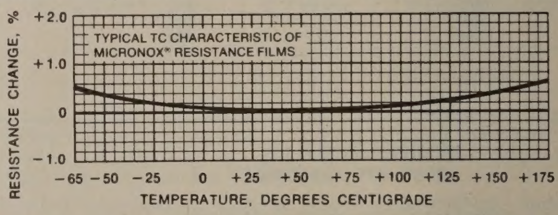
The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

To achieve these many performance advantages, special complex-oxide film resistance materials have been developed by Caddock that include resistivities as low as 35 ohms/square and as high as 400,000 ohms/square to provide resistors that cover an exceptionally wide range of values, sizes and power ratings.

The unique structure of these materials also provides excellent long-term stability and exceptional insensitivity to high temperature and thermal shock.

Micronox® Film Resistors Include Special TC Characteristics for Improved Circuit Temperature Stability.

Inherent in the parabolic shape of the Micronox® TC curve is a temperature 'band' where the TC slope is effectively 'zero.' This unique 'zero TC' characteristic can provide an immediate improvement in circuit stability in many applications.



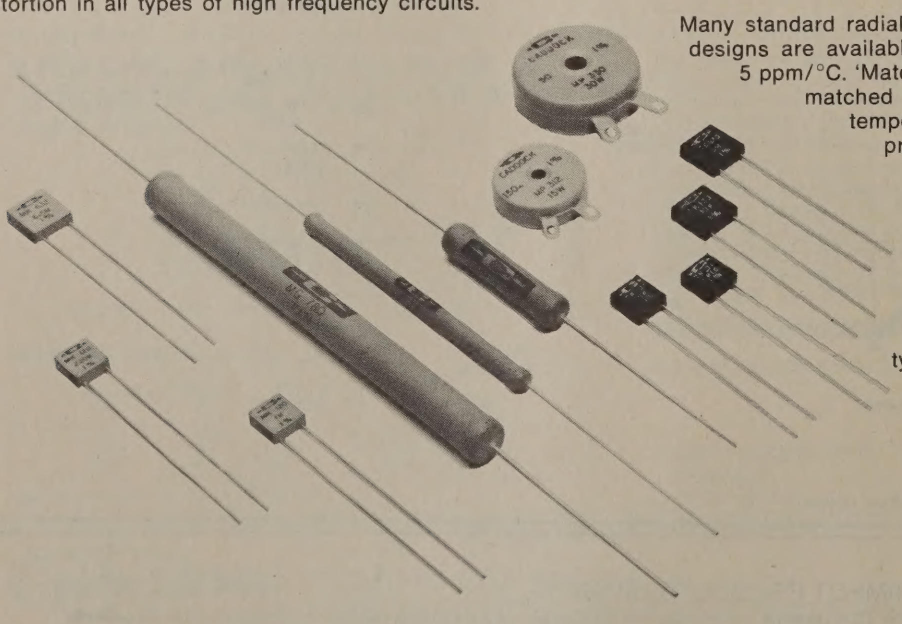
- The shape of this typical TC curve will vary slightly with resistivity.
- Micronox® resistors made with the same resistivity film can be matched to within 2 ppm/°C.
- Resistors made with widely differing resistivity films can be matched to within 10 ppm/°C.
- The tolerance on curve position, with respect to the reference point at 25°C, is defined by the individual specification of 50 ppm/°C or 80 ppm/°C from −15°C to +105°C.

Tetrinox™ Film Resistors Provide Outstanding Load-Life Stability and TCs Lower Than 5 PPM/°C.

Caddock Electronics has recently introduced an advanced resistive system designated as the T-System™. Resistors using this highly stable, ultra-low TC resistance film are being widely used in advanced instrumentation, control, communication and computer systems.

Many standard radial-lead and single-in-line resistor designs are available with TCs of 10 ppm/°C and 5 ppm/°C. 'Matched-pair' resistor sets with TCs matched to within 1 ppm/°C over wide temperature limits are also being produced in large quantities using Tetrinox™ resistance films.

To completely describe the advantages of each of the various types of resistors listed in this catalog, we have provided an introduction to the two basic types of Caddock resistance films used in these resistors. The accompanying index will assist you in locating the model that is right for your application.



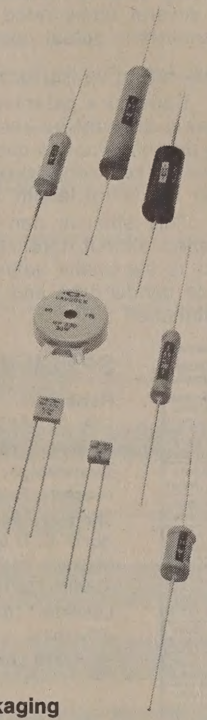
High Performance Power Film Resistors

CADDOCK

HIGH PERFORMANCE FILM RESISTORS

Two complex-oxide resistance films provide this high performance.

Micronox® Resistance Films



Caddock Micronox® resistance films are unsurpassed in the production of precision resistors that combine —

- **High Power Ratings** — to 30 watts.
- **High Voltage Ratings** — to 30,000 volts.
- **High Stability** — as close as 0.01% per 1000 hours in extended life.
- **High Operating Temperatures** — up to +275°C.
- **A Wide Range of Resistance Values In Many Sizes** — from .5 ohms to 2000 Megohms.

These performance advantages make Caddock Micronox® film resistors ideal for use in many types of electronic circuitry, including —

- **Voltage Reference Circuits**
- **High Power Density Packaging**
- **Precision Feedback Circuits**
- **Matched TC Resistor Pairs**
- **High Current Summing Circuits**

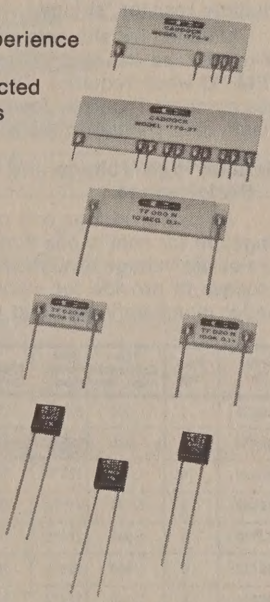
Type MV Low-R Power Film Resistors........Page 3664
Custom Resistive Devices........Page 3665
Type MK Low Cost Precision Film Resistors ....Pages 3666 and 3667

Tetrinox™ Resistance Films



Building on 15 years of experience with our unique complete-oxide technology, Caddock has perfected the T-System™ resistance films that combine these special advantages:

- **Ultra-Low Temperature Coefficient** — standard to less than 10 PPM/°C, and specials to less than 5 PPM/°C.
- **Ultra-Precision** — with tolerances as tight as 0.05%.
- **High Resistance Range** — with values to 10 Megohms in a miniature package.
- **Ultra-Stable in Loadlife** — stability to within ±0.05% per 2000 hours.

This special combination of advantages make Caddock Tetrinox™ film resistors the optimum choice in many high stability applications —

- **Input Voltage Dividers in Precision Instrumentation**
- **Precision Voltage Reference Circuits.**
- **Decade Resistance Networks.**
- **Ultra-Low Power Precision Circuitry.**
- **Ultra-Stable Voltage Dividers.**

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MG & MH Precision High-Voltage Resistors

Type MG and MH Precision High Voltage Resistors have been proven through many years of use in critical applications in airborne computers, manned space vehicles, geophysical instruments, and medical electronics where long term reliability and stability are of utmost importance.

With values as high as 2000 Megohms in a single resistor, operation at very high voltages can now be accomplished without the need for expensive, space-consuming multiple resistor 'strings.'

Matched resistor sets are available over a wide range of ratios, and the ratio TC can be matched as close as 2 PPM/°C when required. These resistor sets are ideal for use as control voltage feedback divider networks in precision high voltage supplies.

Special High-Voltage and High-Voltage Pulse Performance

All power ratings and maximum working voltage ratings are for continuous duty. These ratings are based on pre-stress voltage levels applied during the manufacturing process to provide for stable resistor performance even under momentary overload conditions.

These resistors can be factory-conditioned to withstand up to 60% higher maximum working voltage, provided power ratings are not exceeded. (For this higher rating specify —15, example: MG750N—15. Overload and overvoltage ratings do not apply to —15 resistors.)

Type MG and MH resistors have also found wide use in pulse and current limiting applications where high voltage levels are encountered. To meet these special conditions, Caddock has facilities for pre-stressing resistors to several times rated working voltage as a means of establishing actual operating performance.

Non-Inductive Performance

Caddock's patented Exclusive Non-Inductive Design uses a serpentine resistive pattern that provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.

This efficient non-inductive construction is accomplished without derating of any performance advantages, and is especially valuable in pulse applications where wide bandwidths and excellent pulse fidelity must be maintained.

OUTER INSULATION
MICRONOX FILM RESISTOR
SILVER SHIELDING, GROUNDED TO ONE LEAD

Matched Resistor Sets with Tight Ratio Tolerances and TC Tracking.

Sets of Matched Type MG and MH resistors are available with ratios held as close as 0.05% over the range of ratios from 1:1 to 1:100,000 for use in voltage dividers, reference networks, feedback networks, and current summing networks.

The ratio TC of these matched resistor sets can be held as close as 2 ppm/°C over the temperature range from −15°C to +105°C.

HIGH PERFORMANCE FILM RESISTORS

Type MR & MS Power Film Resistors

Here are the power film resistors that overcome the design limitations of wire-wound resistors! Caddock Power Film Resistors provide power ratings to 12.5 watts at 6000 volts in a single axial lead resistor. By extending both the resistance range and maximum voltage ratings, Type MS Power Film Resistors simplify circuit design and reduce equipment complexity and cost.

All These Features in One Resistor

- Full power and voltage ratings, without derating —
  - — for non-inductive performance
  - — for high resistance values that extend the critical resistance value up to 10 times.
- Higher voltage ratings without the limitations of minimum wire size and spacing.
- Excellent long-term stability. Tests demonstrate typical stability of 0.05% per 1000 hours over extended life.

MICRONOX ® Resistance Films

Type MS performance begins with Micronox® resistance films, the basic element in every Caddock resistor. Produced exclusively by Caddock Electronics, these proven complex oxide films have been used reliably for 15 years in Caddock's precision power resistor products.

Micronox® resistance films are fired directly onto a ceramic core, in air, at 1400°F. These resistance films have demonstrated outstanding stability when exposed to a high ambient temperature, thermal shock and high power densities.

This totally new approach to precision power resistors opens new design possibilities because of the wider resistance range, precise temperature characteristics, and higher temperature and power handling capability.

N Exclusive Non-Inductive Design

U.S. PATENT NO. 3,858,147
OTHER PATENTS PENDING

There's no derating of performance when you specify Caddock's Exclusive Non-Inductive Design.

When non-inductive performance is specified, we produce these power film resistors with a serpentine resistive pattern that provides for neighboring lines to carry currents in opposite directions, thereby achieving maximum cancellation of flux fields over the entire length of the resistor.

The result is a truly non-inductive resistor that is about as inductive as a straight piece of wire the length of the resistor body. This efficient design means faster settling times and minimum distortion in all types of high frequency circuits.

Type MS Power Film Resistors are produced under carefully controlled manufacturing and test procedures.

Manufacturing Control

Type MS Resistors are produced under strict manufacturing controls with processes which include power conditioning, overvoltage conditioning and maximum temperature conditioning.

Quality Control

Type MS Resistors receive quality surveillance which reaches from incoming raw materials to your packaged resistors in the shipping area. And our QC system has been approved for conformance to the requirements of NASA NHB5300.4(1C) and MIL-I-45208 in many recent surveys.

Reliability Verification

Type MS Resistors are included in the Caddock Reliability Testing Program. Conformance to specification parameters including Extended Life, Shock, Vibration and Humidity are verified on a periodic basis. Data from MS resistors can be compared by similarity to other Caddock resistor types, since Type ML, MM, MS, MP, MG, MH and MK represent an identical combination of materials — aluminum oxide substrate, Micronox® resistance film and silicone insulating coating.

Type MS & MR Power Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MS High Performance Power Film Resistors have a proven performance history in industrial, computer, military and space applications. This unique line now includes higher power ratings — up to 15 watts — and resistance values to 30 Megohms.

These exceptional resistors also provide outstanding extended life stability. In annual reliability tests where 2000 hour load-life stability data has been established, Type MS Power Film Resistors have demonstrated typical stability well within 0.1% per 1000 hours and extended life stability of 0.05% per 1000 hours.

Temperature coefficients are also low, with the standard TC of 50 PPM/°C available in all models of the Type MS Power Film Resistor. They can also be supplied on special order in matched resistor sets that provide ratio tracking with varying temperature to within 2 PPM/°C.

All of the Type MS Power Film Resistors are constructed with Micronox* resistance films bonded to a high strength solid ceramic core. Nickel alloy end caps and gold plated dumet axial leads complete the assembly. Encapsulation is provided by a silicone conformal coating.

Non-inductive construction is available in most models. Specify by adding "N" suffix to Model Number.

CADDOCK
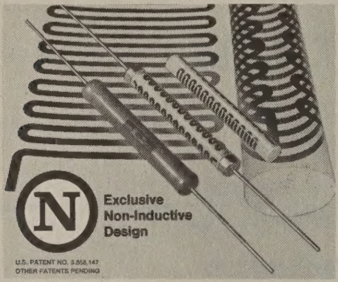
HIGH PERFORMANCE FILM RESISTORS

Type ML & MM Precision Film Resistors

Type ML and MM resistors have a proven performance history in industrial, computer, military and space applications. With power ratings up to 3 watts and resistance values to 15 megohms, these outstanding resistors are ideal for applications requiring tolerances as close as 0.1% and extended life stability of 0.1% per 1000 hours.

The Type MM Precision Film Resistors provide a maximum operating temperature range of +275°C and both the Type ML and the Type MM have temperature coefficients of only 50 PPM/°C over the range from −15°C to +105°C.



Construction includes Micronox* resistance films fired onto a high strength solid ceramic core. End cap construction and a molded case completes the resistor assembly and provides increased resistance to abrasion and solvents.

Caddock's Exclusive Non-Inductive Performance can also be specified for any of these resistors by adding the "N" suffix to the model number.

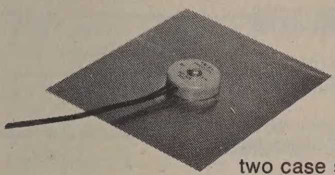
Type MP Chassis Mounted Power Film Resistors

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

With Non-Inductive Performance.

Type MP Chassis Mounted Power Film Resistors are made with Micronox® resistance films fired onto a ceramic substrate which is thermally bonded to an anodized aluminum base. By mounting this assembly directly to a metal surface for improved heat transfer, these unique resistors provide increased packaging densities in many types of electronic equipment.



15 and 30 watt ratings are available in two case sizes that permit through-bolt attachment to the chassis or other heat conducting surface. The molded silicone case encapsulates the resistor assembly to meet the requirements of the most stringent environmental specifications.

The outstanding stability of the Type MP Power Film Resistors has been demonstrated in a 5½ year, 50,000 hour program of continuous load-life testing. Extended life stability during these full-power tests was better than 0.01% per 1000 hours!

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MV
Low-R Power Film Resistors

Type MV resistors extend the advantages of Caddock Micronox* resistance films to values as low as 0.5 ohms in a unique non-inductive design. The multiple-path resistance pattern distributes the currents evenly throughout the resistor and reduces the inductance to an absolute minimum.

The exceptional stability of Caddock Micronox* resistors — produced by firing these complex oxide films onto solid ceramic substrates — provides power ratings as high as 10 watts in a compact axial lead configuration that features excellent overload ratings.

Type MV resistors are ideal for use in high frequency circuits where close resistance tolerances and excellent long-term stability are required.

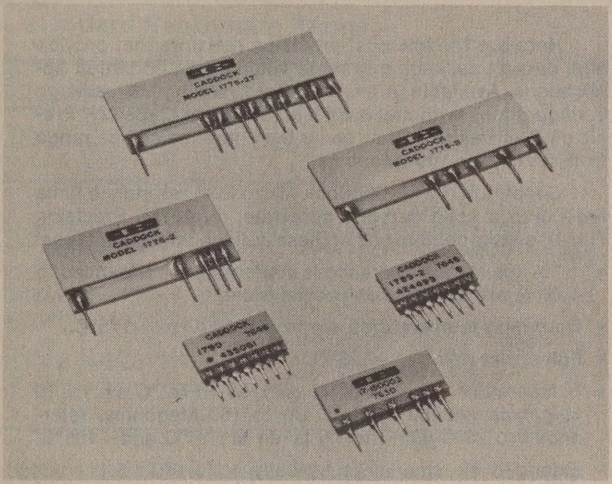
Custom Resistive Devices

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

For the ultimate in resistor network performance, Caddock produces many types of custom resistive networks with an unsurpassed combination of advantages:

- **High Resistance Ratios** — from 1-to-1 up to 1,000,000-to-1!
- **High Transient Handling Capability** — up to 100 times higher than the rated power level!
- **Extended Resistance Range** — from 1 ohm to 5000 Megohms.
- **Tight Resistance Tolerances** — to 0.05%.
- **Tight Ratio Tolerances** — to 0.025%.
- **Close Ratio Tracking** — to 5 PPM/°C from −15°C to +105°C.
- **Exceptional Resistor Stability** — as close as 0.01% per 1000 hours in extended life.

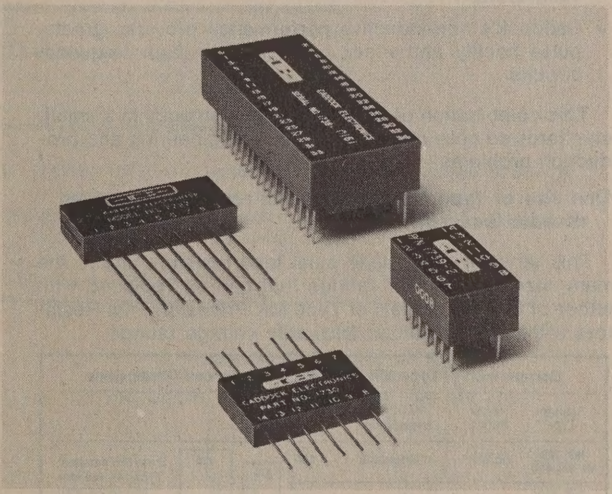
This combination of advantages in one resistor network often provides a practical — **and immediate** — means for improving the performance and specifications of electronic circuitry and equipment without any changes in the design!



Special Multi-Lead Encapsulated Packaging for Complex Resistor Networks.

When circuit requirements make multi-resistor packaging necessary, Caddock can produce specially configured resistor networks with custom lead arrangements.

These custom resistor networks are completely encapsulated to withstand extreme environmental conditions, including shock, vibration, thermal shock and temperatures in the range from −65°C to +275°C.

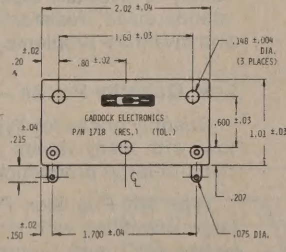


Model 1718 Multi-Megohm Film Resistors With Exclusive Modular Stacking Design.

This Multi-Megohms Resistor is designed to provide a low profile non-inductive high resistance value with precise resistance-temperature characteristics. These are especially useful in high resistance voltage dividers where fast response is important.

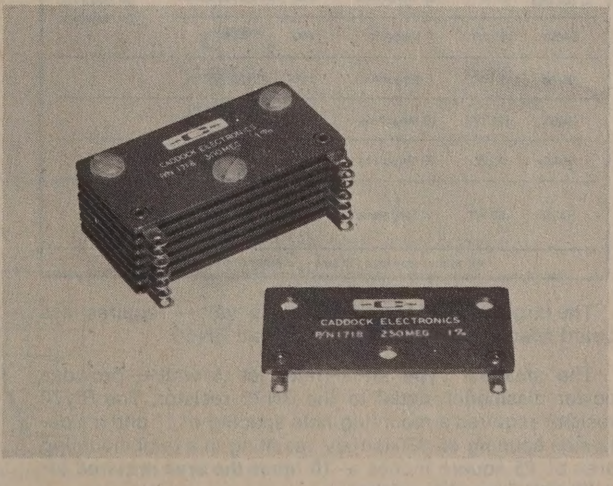
SPECIFICATIONS

Resistance Range: 1 meg-333 meg
Power Rating: 3 Watts @ 25°C
Max. Working Voltage: 12000 Volts
Resistance Tolerance: ±1% (Tolerances 0.2% on special order)
Terminal Material: Gold Plated Copper
Encapsulation: Conformal Coating
Insulation Resistance: 100,000 Megs, Min. when mounted
Temperature Coefficient: ±80 PPM/°C Referenced to 25°C, ΔR taken at −15°C and +105°C
Thermal Shock: Mil-Std 202, Method 107 R shift .5% Max.
Loadlife: 1000 hours at rated power R shift .8% Max.
Mounting: Three 6-32 Nylon Screws with Standoff Spacers, .050 Thick, Supplied with unit
Operating Temperature: −55°C to +125°C



Substrate .054± .01 Thick.

.09± .01 Thick Including Lug.



CADDOCK
HIGH PERFORMANCE FILM RESISTORS

Type MK Low Cost Precision Film Resistors

With Resistance Range Extended to 100 Megohms.

Here are the low cost precision resistors that provide high density packaging in large volume printed circuit applications. Available in two miniature rectangular package configurations with standard lead spacings, Type MK Precision Film Resistors now cover the entire resistance range from 10 ohms to 100 Megohms.

Constructed with Caddock Micronox® resistance films fired onto a solid ceramic substrate, Type MK Precision Film Resistors combine all of these outstanding advantages:

- ±1% resistance tolerance is standard and tolerances to ±0.1% are available on special order.
- Operating temperatures are from −55°C to +175°C.
- Full power rating at +125°C.
- Temperature Coefficient is only 50 PPM/°C up to 10 Megohms and 80 PPM/°C up to 100 Megohms, referenced to 25°C with the ΔR taken at −15°C and +105°C.
- Extended life stability is typically better than 0.1% per 1000 hours.
- Caddock's non-inductive performance provides greater pulse fidelity and wider bandwidths in high frequency circuits.

This combination of performance advantages in a small, standardized case can simplify many engineering and production problems:

One size of Type MK resistors can replace many sizes of radial lead resistors.

This table of "RN" style axial lead resistors shows the many sizes and power ratings that can be replaced with either of the two models of Type MK Precision Film Resistors within the maximum allowable voltage ratings.

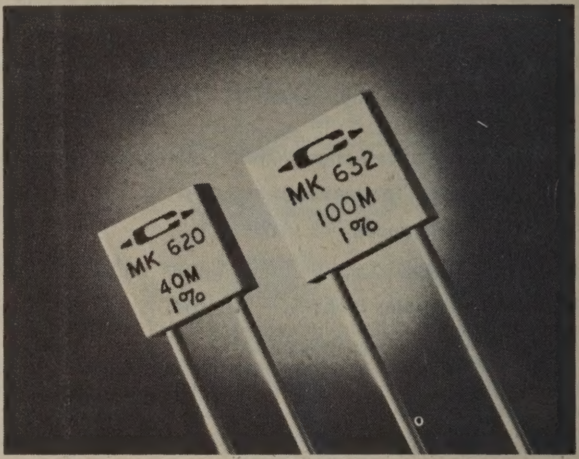
Comparison of Type MK and "RN" Ratings and Dimensions

Resistor Type	Power Rating	Maximum Resistance	Mounting Hole Spacing		
MK 120 or MK 620	**.50 WT.**	**40 Megohms**	**.150**		Even the smallest Type MK resistor can replace all of these RN type resistors.
MK 132 or MK 632	**.75 WT.**	**100 Megohms**	**.200**		
RN50	.05 WT	1 Megohm	.400		
RN 55	.10 WT	5 Megohms	.500		
RN60	.125 WT	10 Megohms	.625		
RN65	.25 WT	20 Megohms	.875		
RN70	.50 WT	40 Megohms	1.000		

All outline drawings full size — dimensions in inches.

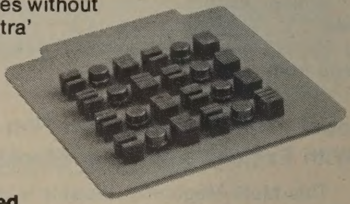
The largest Type MK — rated at .75 watt — requires less board space than even the 1/20th watt RN 50.

The smallest Type MK — rated at .5 watt — provides power dissipation **equal** to the RN 70 resistor. The RN 70 resistor requires a mounting hole spacing of 1″ and a side-to-side spacing of .250 inches, resulting in a total mounting area of .25 square inches — **10 times the area required for a .75 watt Type MK resistor!**



One standard resistor configuration can simplify board layouts.

With the exceptionally wide range of resistances that are available in each model of Type MK Precision Film Resistors, circuits can now be designed for maximum packaging densities without the need for leaving 'extra' space where resistor value changes can require larger resistors or non-uniform lead spacings.



Standardization of resistor size can speed assembly procedures and reduce procurement costs.

The standardization of resistor size can pay additional dividends by simplifying assembly procedures. The radial leads do not require additional bending prior to insertion, and the standard lead spacing can reduce the time required for assembly.

The combination of higher power rating and smaller size can also lower procurement costs. By reducing the wide variety of sizes and types of axial lead resistors to a single, 'standardized' resistor type, unit prices can be lowered and inventory problems simplified.

Low Quantity Prices — Fast Delivery

Quantity prices for Type MK Precision Film Resistors are low, with many values priced under 30 cents each in medium-to-large production orders.

Type MK Precision Film Resistors can be delivered in large quantities with normal delivery schedules of 4 to 6 weeks ARO, and prototype quantities can usually be delivered from stock.

A pricing schedule for all values and models of Type MK Precision Film Resistors is available upon request. For specific price and delivery information call or write to the main offices of Caddock Electronics in Riverside, California.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

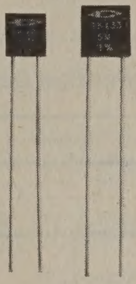
Type TK Temp-Stable Precision Film Resistors

With Temperature Coefficients of Less Than 10 PPM/°C.

Caddock introduces a new design element for precision electronic circuitry — an advanced technology breakthrough that solves many critical circuit stability problems — the **Type TK Temp-Stable Precision Film Resistors with the Tetrinox™ resistance system.**

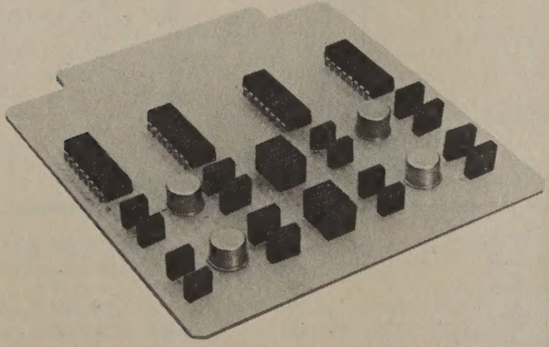
Type TK Temp-Stable Precision Film Resistors provide a combination of performance advantages never before available in a resistive component:

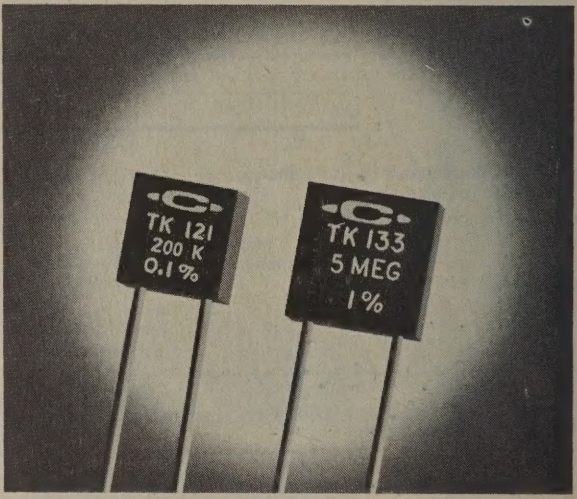
- **Temperature Stability** — better than 10 PPM/°C over the entire temperature range from −55°C to +125°C!
- **Long-Term Absolute Stability** — better than ±0.05% per 2000 hours of operation.
- **Extended Resistance Range** — from 1000 ohms to 10 Megohms.
- **Precision Tolerances** — ±1% is standard, and tolerances as close as ±0.01% are available.
- **Wide Operating Temperature Range**—from −55°C to +175°C.
- **Small Size** — with two miniature rectangular cases for maximum packaging density and minimum mounting area.
- **High Power Density** — with power ratings of .3 watt and .4 watt in molded cases, the largest of which is a standard CK 06 package.
- **Highest Performance-to-Cost Ratio** — with many values priced below $1.50 each in 100 lot quantities.



(Photos show resistors full size)

Building on 15 years of experience with our unique complex-oxide technology, Caddock has perfected the Tetrinox™ resistance system — the first high resistance system to provide a TC that is well within 10 PPM/°C and that is also essentially linear over the entire temperature range from −55°C to +125°C.





The exceptional performance of Type TK resistors can achieve improvements in many circuit applications:

Low TC "Matched-Pair" Voltage Dividers Can be Assembled Without Pre-Selection of Resistors.

An important application for Type TK resistors is in "matched-pair" voltage dividers where the low 10 PPM/°C temperature coefficient provides ratio tracking of less than 20 PPM/°C without resistor pre-selection or special testing.

With factory selection, Type TK resistor pairs can be matched to within 1 PPM/°C.

Extended Resistance Range Reduces Power Requirements

Because the Type TK resistors provide resistance values as high as 10 Megohms — values that are up to 100 times higher than other types of ultra-low TC resistors — engineers can now design precision circuits with lower current drain and lower power requirements.

High Density Packaging

The radial lead mounting and small rectangular case of Type TK resistors permits high packaging densities in low profile electronic circuitry. And because both models of Type TK resistors are available in an exceptionally wide range of resistances, lead spacing and mounting space can be standardized.

For additional information on the Type TK resistors for your high stability circuits, contact the engineering staff of Caddock Electronics in Riverside, California. They can assist you in determining the exact temperature coefficient and tolerances your application requires, and will provide both evaluation and production quantities of these new resistors on fast-delivery schedules.

CADDOCK
HIGH PERFORMANCE FILM RESISTORS

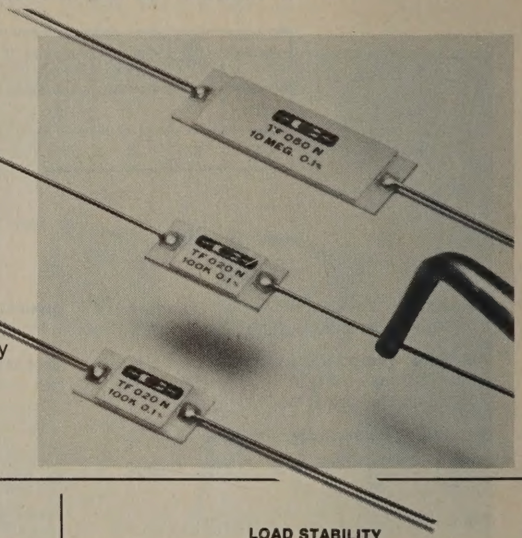
Type TF Low TC Ultra-Precision Film Resistors

A cost-effective replacement for wire-wound resistors.



- **Ultra-Precision** — Resistance tolerance of ±0.1% is standard. Tolerances to ±0.01% are available.
- **Resistance Values** — 1 kohm to 10 Megohms.
- **Low Temperature Coefficient** — Less than 15 ppm/°C.
- **Non-Inductive Performance** — For greater pulse fidelity and wider bandwidths.

Type TF precision resistors employ the new Caddock Tetrinox™ resistance films — the resistance system that sets a new standard for high value, ultra-stable precision resistors.

A whole new approach to quantity production of ultra-precision resistors is the result of combining our unique complex-oxide technology with an advanced high thru-put laser manufacturing capability.

The result: You receive resistors with the highest performance — in quantity — at the lowest cost!

Standard Type TF Resistors

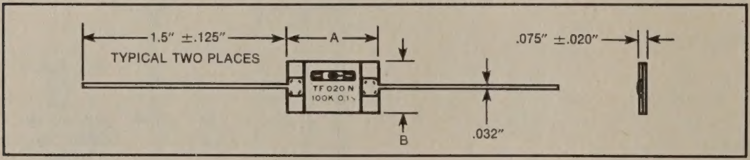
Model No.	Wattage @ 70°C	Maximum Continuous Oper. Voltage	TC ppm/°C	Resistance		Dimensions		Leadwire
				Min.	Max.	A	B	
TF020N	.33	300	15	1 K	2 Meg	.75 ±.020	.375 ±.020	Tinned Copper
TF050N	.75	1400	15	10 K	10 Meg	1.5 ±.020	.50 ±.020	Tinned Copper

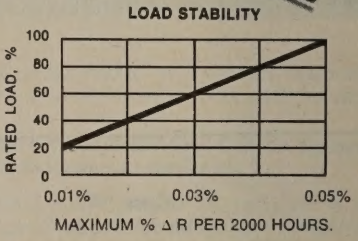
Absolute Temperature Coefficient: ±15 PPM/°C from −55°C to +105°C., referenced to +25°C.

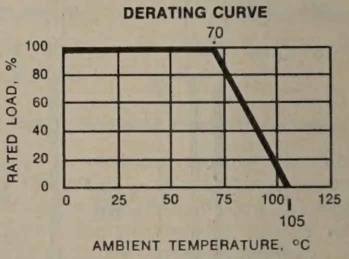
Resistance Tolerance: ±0.1% standard. Tolerances to ±0.01% on special order.

Storage Temperature: −55°C to +105°C.

Shelf Life: Typically 50 PPM per year.



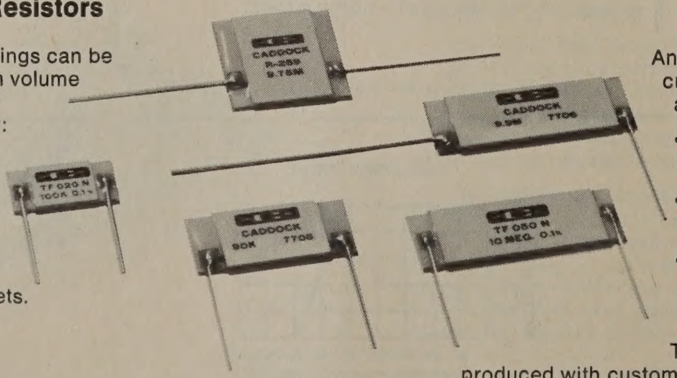




Custom Type TF Resistors

Additional cost savings can be realized when your high volume ultra-precision Type TF resistor is optimized for:

- Voltage rating.
- Power rating.
- Mechanical configuration.
- Ratio matched sets.



And for special requirements, custom Type TF resistors are available with:

- Resistance values to 25 Megohms.
- TCs of 10 ppm/°C. 15 ppm/°C or 25 ppm/°C.
- Shelf stability of 25 ppm per year.

Type TF resistors can also be produced with custom-spaced radial leads that will plug directly into your existing circuit layouts.

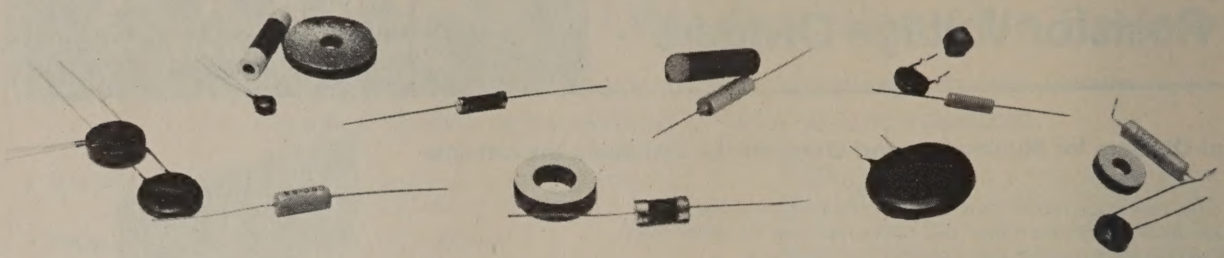
CARBORUNDUM® VARISTORS



Carborundum silicon carbide varistors are voltage-dependent resistors which are offered in a wide variety of configurations, including discs, rods, and washers. In addition to the sizes shown on these pages, rods are available up to 18 inches in length, washers are available up to 3½ inches in diameter. Typical uses include limitation of peak discharges, spike suppression, stabilization of voltages, and generation of non-linear functions.

Varistors are specified by the voltage measured across them, suitably toleranced, at some constant current. The slope of the voltage-current characteristic is most often given by the maximum voltage ratio for two specified currents.

In general the characteristic for a varistor may be approximated by the equation:

$$i = Ke^n$$

where i and e are instantaneous current and voltage respectively, K is a proportionality constant, and n is an exponent applicable in the range in which the varistor is used: most often it is between 3 and 5.

The silicon carbide varistor is a "forgiving" component. When hit by a voltage surge, the energy is absorbed throughout its body, not at a junction. A voltage surge beyond the design level causes substantial increase in current and energy absorption, but not a catastrophic failure.

CARBORUNDUM

CARBORUNDUM® VARISTORS

Standard varistors described below have a 10% tolerance on voltage. Also available: leadless discs and rods, voltages specified at intermediate values or at other currents, and voltage tolerances of ±15% and ±20%. Available at extra cost: voltage tolerances of ±5% and ±7%, color coding, and special coatings.

Standard disc varistors have a black flame-retardant PVC coating. Also available: Glyptal coating and kinked leads for printed circuit board insertion.

Standard rod varistors have a blue epoxy coating. Available at extra cost: formed leads for printed circuit board insertion.

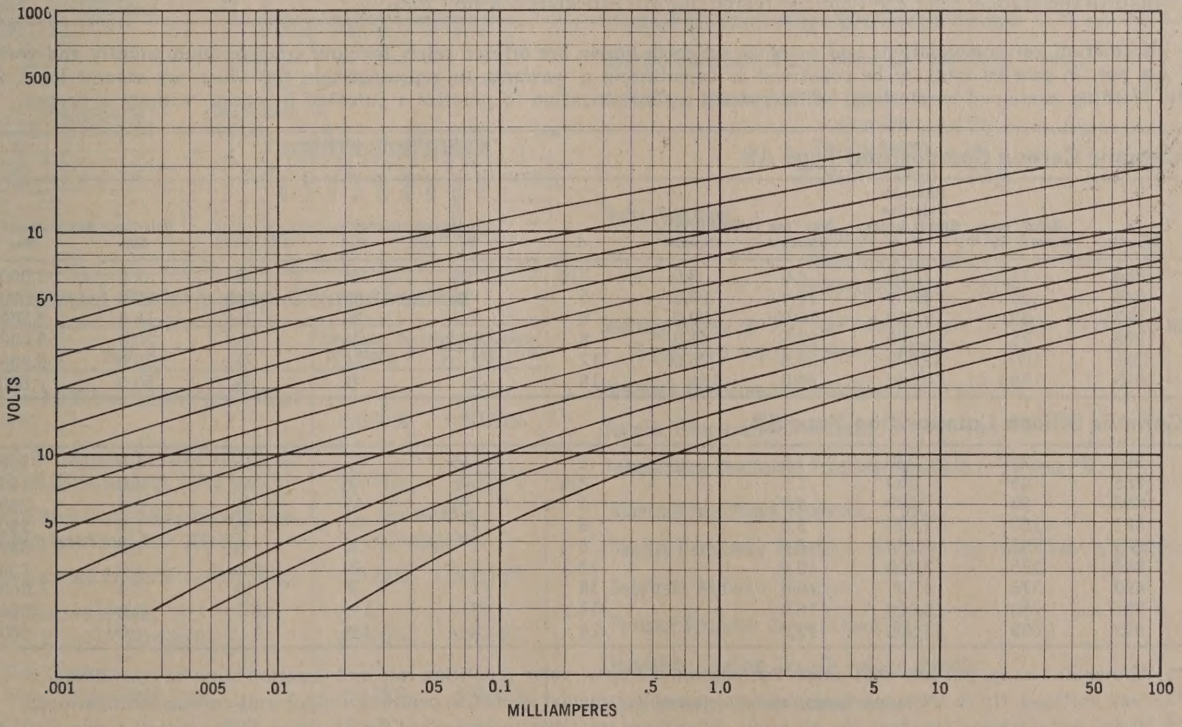
	233BNR4-	0.250	0.625	0.375	0.812	0.032	—	800	1.000	5.0	0.25
	234BNR4-	0.250	1.000	0.375	1.188	0.032	—	1500	1.500	8.0	0.25



These curves are plotted for a family of variously rated 379BNR2- varistors. The characteristics of other varistor styles are of similar shape, and they can be approximated by using the "curve factors" shown in the above chart. To do this, multiply the voltages on the ordinate by the voltage curve factor for the style chosen, and multiply the currents on the abscissa by the current curve factor. For a type 233BNR4- varistor, for example, the 10.0 volt, 4.0 milliampere point on the chart would be read as 50.0 volts, 1.0 milliamperes.

*1. Allowable energy per one shot pulse. For continuous duty, pulse repetition rate and duration must be considered.

*2. Peak voltages. Up to 100% increase can be obtained by special dielectric coatings and/or anti-corona terminations.

*3. Nickel metallization standard for AS types. Aluminum metallization standard for SP types. Other metallization available upon request; example: copper, solder-tinned copper or silver.

*4. Refer values other than shown to the plant for special quotation.

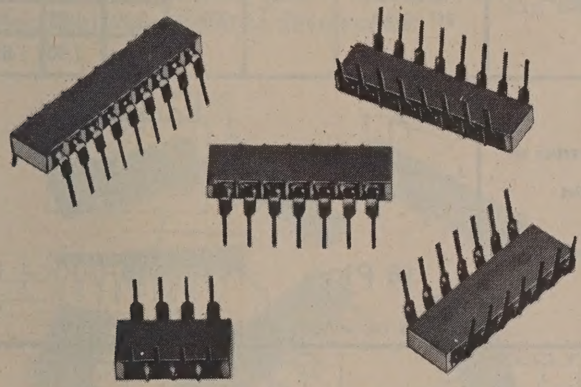
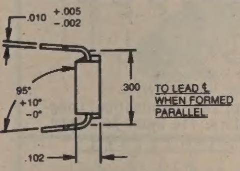
WORLD LEADER IN CERMET RESISTOR TECHNOLOGY

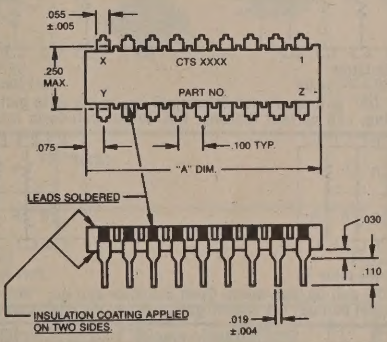
DUAL-IN-LINE CERMET RESISTOR NETWORKS

CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices)*

CTS Series 760 Dual-In-Line cermet resistor networks are available in 8, 14, 16, and 18 lead styles. CTS now offers you a choice of four popular space-saver packages. All are designed to simplify automatic insertion along with IC's and other DIP products for reduced costs. Easy to hand mount, too. Available without cover coat, so you can trim for circuit balance in your own plant. Choose from standard circuits available off-the-shelf for immediate delivery or custom designed to your specifications.







NO. OF PINS	"A" DIM	PIN DESIGNATION		
		X	Y	Z

Effect of Soldering: 63/37 solder, 246°C, 2 sec.	±0.25%	±0.05%

FEATURES:

- Low height profile
- .100″ lead spacing
- High overload capabilities
- 8, 14, 16 & 18 pin constructions
- Compatible with automatic insertion equipment
- 2 watt power capabilities
- Reduced insertion time
- Available with capacitors and/or active devices*

ELECTRICAL AND MECHANICAL SPECIFICATIONS:

Description: 8, 14, 16, and 18 pin dual-in-line modules on .100″ lead centers.

Standard Resistance Range: 22Ω through 1 MegΩ.

Special Resistance Range: Below 22Ω and above 1 MegΩ.

Resistance Matching (2 like resistors):

50Ω to 30KΩ — 0.5%
30KΩ to 250KΩ — 1%
250KΩ to 3 MegΩ — 2.5%

Ratio Matching:

50Ω to 30KΩ — ±1%
30KΩ to 250KΩ — ±2%
250KΩ to 3 MegΩ — ±5%

Wattage Rating @ 70°C per module: 8 pin - .75 watt; 14 pin - 1.5 watts; 16 pin - 1.75 watts; 18 pin - 2.0 watts.

Standard Temperature Coefficient: ±300 ppm/°C.

Special Temperature Coefficient: to ±100 ppm/°C.

Temperature Coefficient Tracking: Available to 50 ppm/°C.

Standard Resistance Tolerance: ±5%.

Special Resistance Tolerance: ±1% or ½Ω (whichever is greater).

Substrate Material: Alumina.

Resistor Material: Cermet - thick film.

Insulation Coating: Organic - epoxy phenolic.

Lead Material: Solder coated copper.

Solder: 63/37 Tin/Lead.

Lead Strength: 5# pull.

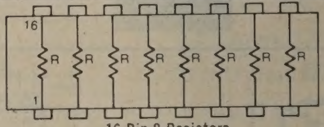
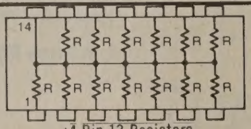
14 Pin-7 Resistors
Part Number 760-3-R+value

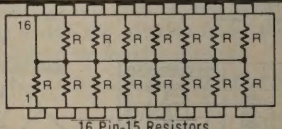


16 Pin-8 Resistors
Part Number 761-3-R+value

APPLICATIONS: "Wired OR" pull-up; Power driver pull-up; Power gate pull-up; Line termination; Long-line impedance balancing; LED current limiting; ECL output pull-down resistors; TTL input pull-down.

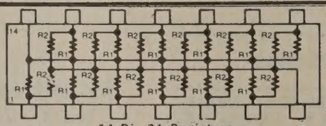


14 Pin-13 Resistors
Part Number 760-1-R+value

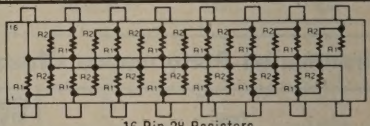


16 Pin-15 Resistors
Part Number 761-1-R+value

APPLICATIONS: MOS/ROM pull-up/pull-down; Open collector pull-up; "Wired OR" pull-up; Power driver pull-up; High speed parallel pull-up; TTL unused gate pull-up; TTL input pull-down; Digital pulse squaring.



14 Pin-24 Resistors
Part Number 760-5-R+values



16 Pin-28 Resistors
Part Number 761-5-R+values

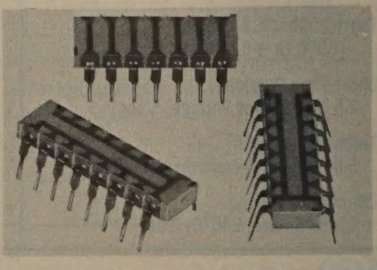
Resistance Values R1/R2	Part Numbers	
220Ω/270Ω	760-5-R220/270	761-5-R220/270
220Ω/330Ω	760-5-R220/330	761-5-R220/330
1.5K/3.3K	760-5-R1.5/3.3K	761-5-R1.5K/3.3K

Other combinations available upon request

Pulse Squaring TTL Terminators

CTS 760-5 networks consist of two resistor pairs of the above value combinations. The resistors are connected together in series with a common line for power and a common line for ground. The junction of each pair is brought out to a separate terminal.

CONDUCTOR MODULES



Eliminate time consuming installation of jumper wires.

Density of Jumpers:
Depending on number of pins, screened on both sides of substrate. Built to customer specifications and requirements.

WORLD LEADER IN CERMET RESISTOR TECHNOLOGY

SINGLE-IN-LINE CERMET RESISTOR NETWORKS

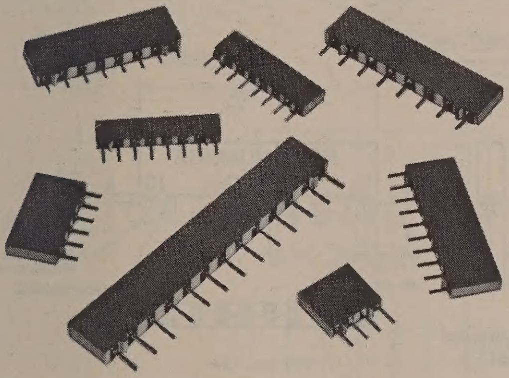
CERMET RESISTOR NETWORKS (Available with capacitor chips and/or active devices)*

CTS . . . Leader in the field of **Low Profile** space-saving Cermet Resistor Modules. Readily recognizable because of the familiar CTS Blue.

As is well illustrated, these modules have been specifically designed to save space.

So if you want to reduce the size of your design or add more complex circuitry without increasing size, CTS rates top consideration.

Most appealing is the fact that "The Little Blue Brick" is an extensive "Off The Shelf" item with CTS.



750 Series

Environmental Performance Characteristics

For units less than .340″ high, refer to page 8 for performance characteristics. Test	Allowable Resistance Change CTS Max△ R	CTS Avg. △ R
Load Life: 1,000 hrs., 0.1 watt per resistor at 70°C	±0.40%	±0.20%
Moisture Resistance: 0.1 rated wattage at 70°C, 90-98% humidity, 1,000 hrs.	±0.50%	±0.20%
Insulation Resistance: Measured wet after moisture resistance test, 200 VDC	Greater than 1000 megohms	
Low Temperature Exposure: −63°C, 4 hrs.	±0.10%	±0.04%

Short Time Overload: 2.5 times rated voltage, 5 sec.	±0.25%	±0.05%
Terminal Strength: 5 lb. tensile & compression, 30 sec.	±0.10%	±0.03%
Effect of Soldering: 63/37 solder, 246°C, 2 sec.	±0.10%	±0.05%

FEATURES:

- Compact edge mount modules
- Ultra high stability and reliability
- Automatic insertion capabilities
- Reduced insertion time
- Fewer items to inventory
- Space savings over individual resistors
- Available with capacitors and/or active devices*
- Available with .100″, .125″ and .150″ lead centers

ELECTRICAL AND MECHANICAL SPECIFICATIONS:

Description: Cermet thick film single-in-line resistor networks.

Standard Resistance Range: 33Ω through 1 MegΩ.

Special Resistance Range: Below 33Ω and above 1 MegΩ.

Resistance Matching (2 like resistors):
50Ω to 30KΩ — 0.5%
30KΩ to 250KΩ — 1%
250KΩ to 3 MegΩ —2.5%

Ratio Matching:
50Ω to 30KΩ — ±1%
30KΩ to 250KΩ — ±2%
250KΩ to 3 MegΩ —±5%

Standard Temperature Coefficient: ±250 ppm/°C.

Special Temperature Coefficient: ±100 ppm/°C.

Temperature Coefficient Tracking: Available to 50 ppm/°C.

Standard Resistance Tolerance: ±5%.

Special Resistance Tolerance: to ±0.5% or ½Ω (whichever is greater).

Substrate Material: Alumina.

Resistor Material: Cermet - thick film.

Insulation Coating: Organic - epoxy phenolic.

Lead Material: Solder coated copper.

Solder: 63/37 Tin/Lead.

Lead Strength: 5# pull.

Wattage Rating @ 70°C (see chart below).

Lead Centers	Ht. of Module (Max.)	Number of Pins 2	4	5	6	7	8	9	10	11	12	13

CLAROSTAT POWER RESISTORS

FIXED RESISTORS TUBULAR

VITREOUS ENAMEL/GREENOHM V™

Vitreous enamel, wirewound power resistors are engineered to meet highest quality specifications. Wire windings are finest grade resistance alloy. Designed for utmost reliability and stability under adverse conditions. Teal green enamel finish withstands over-heating without peeling or cracking. Tolerance, ±5% except values under 1 ohm, ±10%. VPR types (up to 20 watts) have wire lead and lug terminals. VP and VK types (25 watts and up) have lug terminals, and mounting bracket.

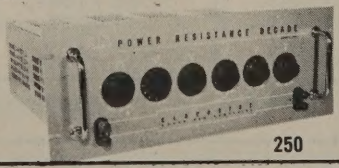
POWER RESISTOR DECADE BOX

240C



250

The Resistance Decade Box, Model 240-C for bench use — Model 250 for rack mounting, provides any resistance from 1 to 999,999 ohms for working circuits at the flip of a switch. Six front-panel dials enable selection in 1 ohm increments, the total value being read directly from the dial. Each decade has a power rating of 225 watts maximum, 1,000 Vdc or 660 Vac maximum.

Resistance changing switches are of the type that prevent a resistance breakdown between steps, thus protecting delicate meters and measuring instruments in the circuit. Knobs indicate the resistance value being used at a glance.

Clarostat GREENOHM Power Resistors are used throughout. These components are wire-wound power resistors on ceramic tubes and coated with an exclusive Clarostat vitreous enamel providing the most rugged, long-lasting, trouble-free power resistor available. The resistors are mounted in rigid metal supports. Overall length: 240C: 13″ long x 8½″ deep x 5¾″ high, weight 11½ lbs. 250: 19″ long x 13¾″ deep x 7″ high (fits in standard 19″ relay rack, weight 18½ lbs.

Suggested Uses: Resistance determination, Load Resistance, Meter Multiplier, Calibrating Meters, providing any desired ohmage as a universal power resistor.

Decade No.	1	2	3	4	5	6
Max. Current Rating (amps)	5	1.5	.5	.15	0.5	.005
Resistance Tolerance	5%	2%	2%	2%	2%	2%

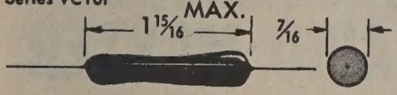
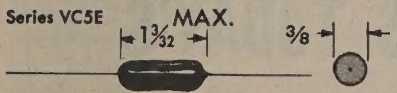
FIXED RESISTORS AXIAL LEAD

AXIAL LEAD 3.25, 6.5 AND 11 WATTS —SERIES VC

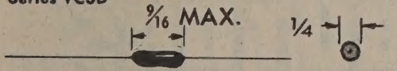
Series VC10F



Series VC5E



Series VC3D



Lead Length: 1½"   **Lead Diameter: .032**

Axial lead resistors are particularly adapted to printed circuit, terminal board, and point-to-point wiring applications. These resistors save considerable space because of the elimination of mounting brackets and terminal lugs. Standard resistance tolerance is ±5% for 1 ohm and higher and tolerance below 1 ohm is ±10%. Finished with Clarostat's new vitreous shade of teal green.

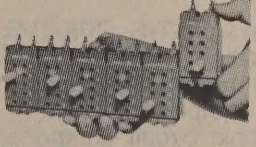
PRECISION RESISTANCE DECADE BOX

MINIATURIZED CLARO-DEC



The most flexible innovation yet in precision resistance decade boxes, the Claro-Dec serves many applications with all the versatility needed for the job. Claro-Decs (within established parameters of current) are used whenever accurate steps of resistance values between .1 ohms and 900K ohms, ±1%* are required. Selection of desired steps of resistance is accomplished by insertion of a banana plug into the proper, marked front panel hole on the unit. Individual or multiple Claro-Dec units are flush panel or breadboard mounted with equal ease. Units may be physically ganged by sliding the molded-in tongue-and-groove together and electrically series connected with a supplied wire jumper or accessory banana plug.

Model	Total Res. of Decade (Ohms)	Resistance Per Step (Ohms)	Accuracy (+C)*	Maximum Current
260-1	0.9	0.1	±5%	1 Amp
260-2	9	1.0	±1%	350 Ma
260-3	90	10	±1%	100 Ma
260-4	900	100	±1%	35 Ma
260-5	9K	1K	±1%	10 Ma
260-6	90K	10K	±1%	3.5 Ma
260-7	900K	100K	±1%	1.0 Ma

*C-Contact resistance, .005-.03 ohms, typical, .01 ohms.

ELECTRONIC DISTRIBUTORS MASTER CATALOG

Known as O-T-S, OFF-THE-SHELF CATALOG until this edition, the MASTER CATALOG encompasses the following product areas: audio and communications equipment; electromechanical components; electronic circuit components and subassemblies; panel components and hardware; production equipment and tools; test instrumentation; power sources; wire and cable; and related materials and chemicals.

The MASTER CATALOG is broken down into four basic sections. **A GENERAL INDEX** which lists manufacturers and products alphabetically. **A MANUFACTURERS' CATALOG SECTION** which displays their respective product pages and lists their addresses and phone numbers. **A MANUFACTURERS' DIRECTORY,** where participating manufacturers, again listed alphabetically with addresses and phone numbers, highlight their distributors. And a **GEOGRAPHIC DISTRIBUTORS' DIRECTORY** which includes the names, addresses and phone numbers of the local distributors nationwide which stock the products of manufacturers whose data appears in the "Manufacturers' Catalog Section."

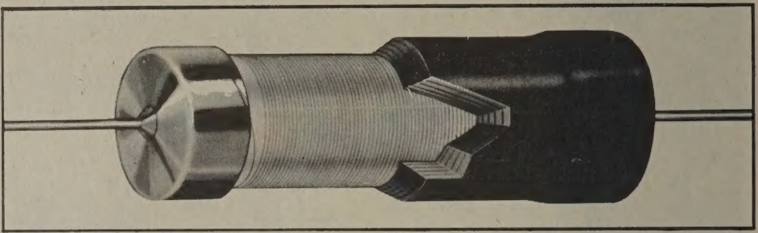
PRECISION WIREWOUND QUICK REFERENCE GUIDE



For complete information, contact:
DALE ELECTRONICS, INC.
Box 609, Columbus, Nebraska 68601
Phone: 402-564-3131

Coatings, housings, wire, cores—in each of these areas Dale has made definite contributions to the state of the art in precision wirewound resistors. Coupled with this are Dale-developed procedures in materials procurement and quality control which have established a constant high level of production excellence. The result is a comprehensive, reliable—and very competitive—line of standard resistors *plus* amazing flexibility in adapting to your special requirements. Examine this catalog, then give us a call—we are ready to help you.

PRECISION POWER WIREWOUND

DALE TYPE	BASIC DESCRIPTION	APPLICABLE MIL. SPEC.	EQUIV. MIL. TYPES*		CONDENSED SPECIFICATIONS**
			DALE	MIL.	
RS & NS Molded Coated	Silicone coated and molded precision power wirewound resistor with outstanding stability and performance under severe environmental conditions. NS = Non-Inductive Counterpart	MIL-R-26E (Char. U & V)	RS-1A RS-2B RS-2C-23 RS-5-69 RS-5-70 RS-10-38 RS-10-39	RW-70 RW-79 RW-69 RW-74 RW-67 RW-78 RW-68	**Power:** .25, .4, .75, 1.0, 1.1, 2.5, 3, 3.25, 4, 5, 7 and 10 watt sizes **Resistance Range:** .1Ω to 273KΩ, depending on size and tolerance **Resistance Tolerance:** .05%, .10%, .25%, .5%, 1%, 3%, 5%
		MIL-R-23379	RS-1A RS-2C-23 RS-5 RS-10	RWP-18 RWP-20 RWP-21 RWP-23	
G & GN  Molded  Coated	Silicone coated and molded precision power wirewound resistor, utilizing beryllium oxide core for exceptional power-size ratio and stability. GN = Non-Inductive Counterpart	MIL-R-26E (Char. U & V) MIL-R-26C (Char. G & V)	G-1 G-3 G-5C G-10 G-15	RW-81 RW-80 RW-69 RW-67 RW-68	**Power:** 1, 1.5, 2.25, 4.0, 4.5, 5, 6, 7, 10 and 15 watt sizes **Resistance Range:** .1Ω to 273KΩ, depending on size and tolerance **Resistance Tolerance:** .05%, .10%, .25%, .5%, 1%, 3%, 5%
		MIL-R-23379	G-1 G-3 G-5C-2 G-10 G-15	RWP-17 RWP-19 RWP-20 RWP-21 RWP-23	
RLS & NLS 	Silicone coated precision power wirewound resistor with radial leads for printed circuit board mounting. NLS = Non-Inductive Counterpart	MIL-R-26E MIL-R-26C MIL-R-23379 (performance only)	No Mil. Models of this physical configuration		**Power:** 1.0, 1.1, 2.5, 3, 3.25, 4, 5, 7 and 10 watt sizes **Resistance Range:** .1Ω to 273KΩ, depending on size and tolerance **Resistance Tolerance:** .05%, .10%, .25%, .5%, 1%, 3%, and 5%
GL & GNL 	Silicone coated precision power wirewound resistor with beryllium oxide core. Radial leads for printed circuit board mounting. GNL = Non-Inductive Counterpart	MIL-R-26E MIL-R-26C MIL-R-23379 (performance only)	No Mil. Models of this physical configuration		**Power:** 2.25, 4, 4.5, 5, 6, 7, 10 and 15 watt sizes **Resistance Range:** .1Ω to 273KΩ, depending on size and tolerance **Resistance Tolerance:** .05%, .10%, .25%, .5%, 1%, 3%, 5%
LVR 	Silicone molded precision power wirewound resistor with extremely low resistance values and T.C.	None	No Mil. Models of this physical configuration		**Power:** 2, 5, 10 watt sizes **Resistance Range:** .008 to .800Ω, depending on size and tolerance **Resistance Tolerance:** 1%, 3%, 5%, 10%

**This chart is intended to serve as a guide only, and listing does not indicate or imply qualification where equivalent Mil. types are shown Consult QPL or Dale representative for specific qualification information.*

*****Standard resistance ranges are shown. Consult factory for extended ranges.***

PRECISION POWER WIREWOUND (continued)

DALE TYPE	BASIC DESCRIPTION	APPLICABLE MIL. SPEC.	EQUIV. MIL. TYPES*		CONDENSED SPECIFICATIONS**
			DALE	MIL.	
RH & NH 	Precision power wirewound resistor designed to utilize maximum heat-sink effect of chassis mounting. Element is located inside aluminum housing. NH = Non-Inductive Counterpart	MIL-R-18546	* RH-5 RH-10 RH-25 RH-50 RH-100 RH-250 *Same series in NH styles	RE-60 RE-65 RE-70 RE-75 RE-77 RE-80	**Power:** 7.5, 12.5, 25, 50, 100 and 250 watt sizes **Resistance Range:** .1Ω to 273KΩ, depending on size and tolerance **Resistance Tolerance:** .05%, .10%, .25%, .5%, 1% and 3%
HG & NHG 	Precision power wirewound resistor with beryllium oxide core for exceptional power-size ratio and stability; designed to utilize maximum heat-sink effect of chassis mounting. NHG = Non-Inductive Counterpart	MIL-R-18546	* HG-5 HG-10 HG-25 HG-50 *Same series in NHG styles	RE-60 RE-65 RE-70 RE-75	**Power:** 15, 20, 35 and 50 watt sizes **Resistance Range:** .1Ω to 273KΩ, depending on size and tolerance **Resistance Tolerance:** .05%, .10%, .25%, .5%, 1% and 3%
PH	Precision power wirewound resistor designed to mount through hole in chassis and utilize maximum heat-sink effect of chassis. Several terminal configurations available.	MIL-R-18546 (performance only)	No Mil. Models of this physical configuration		**Power:** 10, 25, 50 and 100 watt sizes **Resistance Range:** .1Ω to 95.2KΩ, depending on size and tolerance **Resistance Tolerance:** .05%, .10%, .25%, .5%, 1% and 3%

PRECISION BOBBIN WIREWOUND

WWA	Epoxy-molded precision bobbin (non-inductive) wirewound resistor with high stability and low T.C.; offers excellent moisture protection and low noise.	MIL-R-93	WWA-23 WWA-24 WWA-26 WWA-36 WWA-38 WWA-48 WWA-412 WWA-416	RB-56 RB-55 RB-54 RB-53 RB-52 RB-57 RB-58 RB-59	**Power:** .1, .125, .15, .20, .25, .33, .50, .75, .875 and 1 watt sizes **Resistance Range:** .1Ω to 23 Meg., depending on size and tolerance **Resistance Tolerance:** .05%, .1%, .25%, .5% and 1% are standard; special tolerances to .005% available
WWP 	Rectangular or round miniature epoxy-molded precision bobbin (non-inductive) wirewound resistors. High stability and low T.C. Excellent moisture protection and low noise. High resistance per unit volume.	MIL-R-93	WWP-225	RB-71	**Power:** 1/8 and 1/4 watt sizes **Resistance Range:** .1Ω to 1.5 Meg., depending on size and tolerance **Resistance Tolerance:** .02%, .05%, .1%, .25%, .5% and 1% are standard; special tolerances to .005% available

WIREWOUND CUSTOM FUSE RESISTOR

CFR	Hermetically sealed custom fuse resistor. Performs function of resistor and series fuse with predictable fusing times.	None	None	**Power:** 1/4, 1/2, 3/4, 1-1/2 and 2-1/2 watt sizes **Resistance Range:** .1Ω to 7.4KΩ, depending on fusing and wattage requirements **Fusing Times:** 1 millisecond to 1 second

WIREWOUND NETWORKS

WDP 	Molded 14-pin dual in-line package containing up to 7 precision wirewound resistors	None	None	**Power:** 3.5 watts max. (up to .5 watts/resistor) **Resistance Range:** 1Ω to 900Ω per resistor **Resistance Tolerance:** 1% to 5%

SPECIAL PURPOSE WIREWOUNDS

	Dale can furnish hundreds of special design variations for wirewound resistors. Special packaging, leads, resistance characteristics, pre-conditioning, matching and many other modifications can be supplied to your specifications.

DALE®

ESTABLISHED RELIABILITY QUICK REFERENCE GUIDE

Produced under strictest fabricating and testing conditions. Backed by nearly a decade of experience in development and production of established reliability components. Capabilities include flexible reliability programs tailored to your specific needs.

TYPE	APPLICATION	APPLICABLE* MIL SPEC AND TYPES	WATTAGE RATING	RESISTANCE RANGE	CORE SIZES	TERMINALS	MOUNTINGS	TOLERANCE
HL Flat	For limited space requiring high power-to-size ratio. Vertical or horizontal stacking.	MIL-R-26 RW-20 thru RW-24	30-95 watts	.1 ohm to 550K ohms	Length 1¼ to 6″	Lugs	Thru mount with spacers	±5% (10% below 1 ohm)
HLM Miniature Flat	For limited space, high power-to-size requirements particularly in high vibration areas.	None	10-20 watts	.1 ohm to 65K ohms	Length 3/4 to 2-1/16″	Lugs	Thru mount with spacers	±5% (10% below 1 ohm)
HL Tubular	General purpose wirewound resistors with a broad power range.	MIL-R-26 RW-29, 30, 31, 32, 33, 35, 36, 37 38, 47	5-225 watts	.1 ohm to 1.6 Megohms	O.D. 1/4 to 1-1/8″ Length 1-10½″	Lugs	Push-in bracket or thru-bolt	±5% (10% below 1 ohm)
HLW Tubular	General application where terminal wires are required for direct electrical connection	None	3-20 watts	.1 ohm to 90K ohms	O.D. 13/64 to 7/16″ Length 7/16″ to 2″	Lugs with terminal wires	Terminals, thru-bolt or push-in bracket	±5% (10% below 1 ohm)
HLA Adjustable	For resistance or voltage adjustment	MIL-R-19365C RX-29, 32, 33, 35, 36 37, 38, 47	12-225 watts	1 ohm to 100K ohms	O.D. 5/16 to 1-1/8″ Length 1½ to 10½″	Lugs	Push-in bracket or thru-bolt	±5%
HLT Tapped	For voltage divider networks	MIL-R-26 RW-22, 23, 24, 33, 35, 36, 37, 38, 47	11-225 watts	.1 ohm to 1.1 Megohms	O.D. 5/16 to 1-1/8″ Length 1½ to 10½″	Lugs	Push-in bracket or thru-bolt	±10% each section (±10% total)
CW Axial Lead	Axial leads. For applications requiring high performance at low cost	MIL-R-26 RW-67, 68, 69	2.5-13 watts	.1 ohm to 100K ohms	Body Dia. .188 to .375″ Body Length .500 to 1.781″ Leads 1.5 to 2″	Leads	Terminals	±3%, ±5% (10% below 1 ohm
NHL Non-Inductive	High frequency circuits and applications requiring low inductive effect and minimum distributed capacity	None	5-225 watts	1 ohm to 90K ohms	O.D. 1/4 to 1-1/8″ Length 1-10½″	Lugs or Leads	Push-in bracket or thru-bolt	±5%
HLZ Edge-wound	For heavy duty requirements where space is at a premium High thermal capacity.	None	35-375 watts	.05 ohm to 32 ohms	O.D. 9/16 to 1-1/8″ Length 2 to 10-1/2″	Lugs	Push-in bracket or thru-bolt	±10%

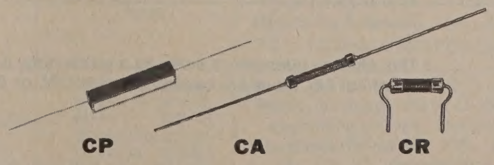
POWER WIREWOUND RESISTORS

High quality, premium grade resistance wire wound onto a woven fibreglass core.

Three types of low-cost resistors for kitchen appliances, automotive devices and entertainment devices.



DALE®

FILM RESISTORS QUICK REFERENCE GUIDE

The industry's widest choice of metal, carbon and tin oxide styles.

PRECISION GENERAL PURPOSE

DALE TYPE	BASIC DESCRIPTION	APPLICABLE MIL-SPEC.	EQUIV. MIL. TYPES*		CONDENSED SPECIFICATIONS
			DALE	MIL.	
MF MIL-R-10509	Epoxy-molded metal film resistor designed to meet a variety of military and commercial applications; combines high stability with low noise and offers exceptional moisture protection.	MIL-R-10509F (Char. C, D and E)	MF50 MF-1/10 MF-1/8 MF-1/4 MFS-1/2 MF-1 MF-2	RN-50 RN-55 RN-60 RN-65 RN-70 RN-75 RN-80	**Power:** 1/20, 1/10, 1/8, 1/4, 1/2, 1 and 2 watt sizes **Resistance Range:** 10Ω to 10 Meg., depending on size and T.C. **Resistance Tolerance:** .1%, .25%, .5%, 1% **T.C.:** ±25, ±50, ±100, ±150 PPM standard
CMF MIL-R-10509	Designed to meet a variety of military and commercial applications. Epoxy roll coated. Flame retardant coating.	MIL-R-10509	CMF-55 CMF-60 CMF-65	RN-55 RN-60 RN-65	**Power:** 1/10, 1/8, 1/4 watt sizes **Resistance Range:** 10Ω to 2 Meg., depending on size and T.C. **Resistance Tolerance:** .1%, .25%, .5%, 1% **T.C.:** ±25, ±50, ±100, ±150, ±200 PPM standard
CMF MIL-R-22684	Metal film resistor with flame retardant epoxy coating. Designed to meet a variety of military and commercial applications; combines high stability, low noise, high power vs. small size and low cost.	MIL-R-22684	CMF-07 CMF-20	RL-07 RL-20	**Power:** 1/4 and 1/2 watt sizes **Resistance Range:** 4.3Ω to 470KΩ depending on size and T.C. **Resistance Tolerance:** 2%, 5% **T.C.:** ±200 PPM standard
MFF & CMF 	Metal film resistors with flame retardant epoxy coating. Meet electrical requirements of MIL-R-10509 and MIL-R-22684.	MIL-R-10509 MIL-R-22684 (reference only)	CMF-1/10 MFF-1/8 CMF-1/8 MFF-1/4 MFF-1/2 CMF-1/4 MFF-1 MFF-2	None	**Power:** 1/10, 1/8, 1/4, 1/2, 1 and 2 watt sizes **Resistance Range:** 10Ω to 10 Meg., depending on size and tolerance **Resistance Tolerance:** 5%, 2%, 1%, .5%, .25%, .1% **T.C.:** ±25, ±50, ±100, ±150, ±200 PPM standard
M (High Value) 	High value (to 100 Meg.) metal film resistor. Multi-layer protective coating.	None	M20 M22 M13 M14	None	**Power:** 1/8, 1/4, 1/2, 1, 2 watt sizes **Resistance Range:** 10Ω to 100 Meg., depending on size and tolerance **Resistance Tolerance:** .5%, 1% standard **T.C.:** ±100, ±150 PPM standard
MC	Epoxy molded carbon film resistor, designed to meet a variety of military and commercial applications; offers exceptional moisture protection.	MIL-R-10509F (Char. B & D)	MC-1/10 MC-1/8 MC-1/4 MCS-1/2 MC-1 MC-2	RN-55 RN-60 RN-65 RN-70 RN-75 RN-80	**Power:** 1/10, 1/8, 1/4, 1/2, 1 and 2 watt sizes **Resistance Range:** 1Ω to 125 Meg., depending on size and tolerance **Resistance Tolerance:** .5%, 1%, 2%
DC	Epoxy roll-coated carbon film resistor; offers small physical size and low cost performance.	MIL-R-10509D (Char. X, also Char. B performance)	DC-1/10 DC-1/8 DC-1/4 DCS-1/2 DC-1 DC-2	– – RN-10 RN-20 RN-25 RN-30	**Power:** 1/10, 1/8, 1/4, 1/2, 1 and 2 watt sizes **Resistance Range:** 1Ω to 125 Meg., depending on size and tolerance **Resistance Tolerance:** .5%, 1%, 2%
D & P 	Precision power film resistors molded into an aluminum housing for complete environmental protection and high stability. Mount to or through chassis. Wide resistance range, low reactance at high frequencies.	None	D5 D10 D15 P8 P8A	None	**Power:** D=4, 8, 12 watt sizes. P=8 watts **Resistance Range:** 50Ω to 2.6 Meg., depending on size **Resistance Tolerance:** 1% and 2% standard

** This chart is intended to serve as a guide only, and listing does not indicate or imply qualification where equivalent Mil. types are shown. Consult QPL or Dale representative for specific qualification information.*

INDUSTRIAL GENERAL PURPOSE

DALE TYPE	BASIC DESCRIPTION	APPLICABLE MIL-SPEC.	EQUIV. MIL. TYPES*		CONDENSED SPECIFICATIONS
			DALE	MIL.	
F 	Flameproof power film resistor with high power/size ratio.	None	F69	None	**Power:** 3 watts **Resistance Range:** 5Ω to 1 Meg. **Resistance Tolerance:** 1%, 2%, 5%, 10% **T.C.:** ±200 PPM
F07 **F20** 	Miniature molded oxide resistor. Meets MIL-R-22684 requirements. Ideal replacement for 5% carbon composition types.	MIL-R-22684	F07 F20	RL-07 RL-20	**Power:** 1/4 and 1/2 watt sizes **Resistance Range:** 10Ω to 470KΩ, depending on size and tolerance **Resistance Tolerance:** 2% and 5% standard. **T.C.:** ±200 PPM
FP 	Power oxide resistor with flame retardant coating. Excellent ability to withstand overloads.	None	FP32 FP33 FP34 FP35	None	**Power:** 4, 6, 8 and 10 watt sizes. **Resistance Range:** 100 to 68KΩ, depending on size and tolerance **Resistance Tolerance:** 5%, 10% standard **T.C.:** ±350 PPM

SPECIAL PURPOSE

HMF 	Epoxy-molded metal film resistor; combines high resistance and precision characteristics.	MIL-R-10509F (performance only)	HMF50 HMF-1/10 HMF-1/8 HMF-1/4 HMF-1/2 HMF-1	None	**Power:** 1/20, 1/10, 1/8, 1/4, 1/2, and 1 watt sizes **Resistance Range:** 100KΩ to 30 Meg., depending on size and T.C. **Resistance Tolerance:** ±1% standard **T.C.:** ±25, ±50, ±100, ±150 PPM standard
LMF 	Epoxy-molded metal film resistor; combines low resistance and precision characteristics.	MIL-R-10509F (performance only)	LMF-1/10 LMF-1/8 LMF-1/4 LMF-1/2	None	**Power:** 1/10, 1/8, 1/4 and 1/2 watt sizes **Resistance Range:** 1Ω to 30Ω, depending on size and T.C. **Resistance Tolerance:** ±1% standard **T.C.:** ±50, ±100, ±150 PPM standard
Low T.C. 	Standard Low T.C.'s on MF, MFF and CMF styles, retaining outstanding features of each.	MIL-R-10509F (performance only)	CMF-1/10 MFF-1/8 MF-1/8 CMF-1/8 MFF-1/4 MF-1/4 MFF-1/2 MFS-1/2	None	**Power:** 1/8, 1/4 and 1/2 watt sizes **Resistance Range:** 30.1Ω to 750KΩ, depending on size and T.C. **Resistance Tolerance:** .1%, .25%, .5%, 1% **T.C.:** ±10, ±15, ±20 PPM standard
A **(Low Value)**	Ultra low value metal oxide resistor. Molded and coated styles meet environmental specifications of MIL-R-22684.	None	A20 A31 A32	None	**Power:** 1/2, 2 and 3 watt-sizes **Resistance Range:** 0.27Ω to 27Ω, depending on size and tolerance **Resistance Tolerance:** 1%, 2%, 5% standard **T.C.:** From <200 PPM to < 500 PPM
MH51 **MH52** **M51** 	Ultra high value resistor—to 1,000KM with superior stability and consistent voltage coefficient. M51 hermetically sealed in glass; others protected by polyolefin sleeve.	None	None		**Power:** 1/4 and 1/2 watt sizes **Resistance Range:** 10M to 1,000KM, depending on size and tolerance **Resistance Tolerance:** 1%, 2%, 5%, 10% and 20% **T.C.:** ±1200, ±1500 and ±1800 PPM
EI 	High voltage metal film resistor combining high resistance and power capabilities.	None	EI1510 EI1511	None	**Power:** 5 watts **Resistance Range:** 100Ω to 20K Meg. **Resistance Tolerance:** .5%, 1%, 2%, 5%, 10%, 20%
I 	High frequency load resistor for applications involving high power, high accuracy RF measurements.	None	None		**Power** (Free Air Rating): 2, 10, 40 and 120 watt sizes **Resistance Range:** 25Ω to 300Ω, depending on size and tolerance **Resistance Tolerance:** 2% and 5% standard **T.C.:** 250 PPM maximum
F43 **F44**	Very high voltage resistor designed for pulse loading and surge discharge.	None	None		**Power:** 1/2 and 1 watt sizes **Resistance Range:** 2 Meg. to 10,000 Meg., depending on size and tolerance **Resistance Tolerance:** 2%, 5%, 10% **T.C.:** –1200 to –2000 PPM typical
F53D **F535D** **F54D**	High voltage industrial grade resistor. Protected by polyolefin sleeve.	None	None		**Power:** 1, 1-1/2 and 2 watt sizes **Resistance Range:** 2 Meg. to 1,000 Meg. depending on size and tolerance **Resistance Tolerance:** 10% and 20% standard **T.C.:** –1200 to –1500 PPM typical
MFH & DCH	Type MFH=Metal Film Type DCH=Carbon Film Designed to meet a variety of military and commercial applications.	MIL-R-10509	MFH-1/10 MFH-1/4 MFH-1 DCH-1/10 DCH-1/4 DCH-1	RN-55 RN-60 RN-75 RN-55 RN-60 RN-75	**Power:** 1/10, 1/8, 1/4, 1/2, 1 and 2 watt sizes **Resistance Range:** 2Ω to 15 Meg., depending on type, size and tolerance **Resistance Tolerance:** .10%, .25%, .5%, 1%, 2%, depending on type

DALE® RESISTOR NETWORKS QUICK REFERENCE GUIDE

THICK FILM, DIP, SIP and FLAT PACK STYLES

DIP STYLES

TYPE	BASIC DESCRIPTION	NO. OF PINS	CONDENSED SPECIFICATIONS
CDM 	DIP style with flat ceramic top. Epoxy coating. Suitable for automatic insertion. Designed to meet MIL-R-83401.	14, 16	**Power Rating:** .20 watt maximum/resistor; maximum/package = 1.6 watts at 70°C **Resistance Range:** 10Ω to 1 Meg. **Tolerance:** ±1%, ±2%, ±5%, ±10% **T.C.:** ±300 PPM/°C, ±100 PPM/°C
LDP 	DIP style with epoxy coating between ceramic sandwich. Suitable for automatic insertion.	14, 16, 18	**Power Rating:** .20 watt maximum/resistor; maximum/package = 2.70 watts (18-01) at 70°C **Resistance Range:** 10Ω to 1 Meg. **Tolerance:** ±1%, ±2%, ±5%, ±10%, ±20% **T.C.** ±250 PPM/°C, ±100 PPM/°C available
SDM 	DIP style with sandwich-type construction. Designed to meet MIL-R-83401. 100% conditioning per Group A.	14, 16	**Power Rating:** .20 watt maximum/resistor; maximum/package = 1.6 watts at 70°C **Resistance Range:** 10Ω to 1 Meg., depending on tolerance **Tolerance:** ±1%, ±2%, ±5% **T.C.** ±300 PPM/°C, ±100 PPM/°C
SDP 	DIP style with sandwich-type construction. Compact resistor circuits for up to 28 resistors. Ideal for special requirements since both top and bottom ceramics are available for circuit design.	14, 16, 18	**Power Rating:** .20 watt maximum/resistor; maximum/package = 2.70 watts (18-01) at 70°C **Resistance Range:** 10Ω to 1 Meg., depending on tolerance **Tolerance:** ±1%, ±2%, ±5%, ±10%, ±20% **T.C.:** ±250 PPM/°C, ±100 PPM/°C available

SIP STYLES

TYPE	BASIC DESCRIPTION	NO. OF PINS	CONDENSED SPECIFICATIONS
CSP 	Single in-line packages with flame retardant epoxy coating. Built-in standoffs. Choice of .250" or .350" maximum seated height. Lead spacings .100" and .125".	6, 8, 10	**Power Rating:** .20 watt maximum/resistor; maximum/package = 1.6 watts at 70°C **Resistance Range:** 10Ω to 1 Meg., depending on tolerance **Tolerance:** ±1%, ±2%, ±5%, ±10%, ±20% **T.C.:** ±250 PPM/°C, ±100 PPM/°C available

FLAT PACK STYLES

TYPE	BASIC DESCRIPTION	NO. OF PINS	CONDENSED SPECIFICATIONS
DFM, DFP 	Compact, thick film flat pack. Designed to meet MIL-R-83401. DFM has 100% conditioning per Group A. Ceramic enclosure. Two internal configurations provide 7 or 13 resistors.	14	**Power Rating:** Depending on configuration, .05 watt or .025 watt/resistor (DFM). .2 watt or .1 watt/resistor (DFP). Maximum/package = .65 watt (DFP); .45 watt (DFM). **Resistance Range:** 10Ω to 1 Meg., depending on tolerance **Tolerance:** ±1%, ±2%, ±5% **T.C.:** ±300 PPM/°C, ±250 PPM/°C, ±100 PPM/°C

CHIP RESISTORS and DISCRETE NETWORKS

CHIP RESISTORS

TYPE	BASIC DESCRIPTION	NO. OF PINS	CONDENSED SPECIFICATIONS
RC, RCW	Thick film chip resistor with choice of sizes to allow wide design flexibility in hybrid circuitry.	None	**Power Rating:** 75, 100, 150 and 300 mw **Resistance Range:** 2Ω to 15 Meg. **Tolerance:** ±1%, ±2%, ±5%, ±10%, ±20% **T.C.:** ±250 PPM/°C

DISCRETE NETWORKS

TYPE	BASIC DESCRIPTION	NO. OF PINS	CONDENSED SPECIFICATIONS
SPR-ARO 	DIP style with up to 11 discrete resistive elements. For use where tight tolerance and low temperature coefficient are required. Meets functional requirements of MIL-R-10509 and MIL-R-55182.	14, 16	**Power Rating:** .1 watt maximum/resistor; maximum/package = 1 watt **Resistance Range:** 10Ω to 400KΩ **Tolerance:** ±.05% to 5% **T.C.:** ±10 PPM/°C to ±200 PPM/°C
SPECIALS	Discrete precision wirewound and film resistors packaged to your requirements and providing broad flexibility in meeting electrical and physical requirements.		

REJECTION FILTER

	Low cost, small size. In 50, 60, 150 Hz models. Moderate attenuation. Plastic case.

MEMCOR Components represent the cumulative design and production knowledge gained during 30 years experience in the industry.

Let MEMCOR sales engineers aid you with your special design and application requirements.

For price, quality, and delivery look to MEMCOR Components. Immediate delivery on stock value resistors. Typical 3-5 week delivery on other standard values and special requirements. These products are available from MEMCOR's Nationwide Authorized Distributor Network.

Write for FREE Catalog.

GENERAL RESISTANCE COMPONENTS

RESISTIVE COMPONENTS

POWER WIREWOUND RESISTORS, MIL-R-26/ MIL-R-39007 STYLES:

The POWER-OHM™ Series of silicone coated wirewound power resistors provides highly reliable continuous operation under the rigorous conditions of the appropriate Mil specs. Tinned copperweld leads are standard; weldable leads can be furnished.

Standard types are shown below; all other popular styles are available, including non-inductive types and a full range of sizes and power ratings using beryllium oxide cores. Consult the factory or your local representative.

Be sure to request a Power-Ohm price list, which shows quantity pricing for both stock and non-stock resistance values in ±0.05% to ±5% tolerances.

GEN. RES. TYPE	MIL TYPE*	POWER RATING (W) U .05% to 5%	V 3%, 5%	MAX. R(Ω)*	NOMINAL DIMENSIONS INCHES Dia.	Long	mm Dia.	Long	AWG Leads

PR99	RW(R)78U/68V	10	13	275k	.375	1.796	9.5	46	#18

**Minimum resistance 100 milliohms typ.; both lower and higher values are available in most types. Mil specs limit maximum R to lower values than those shown. Maximum R available in non-inductive types is typically ½ of the values shown here.*

PRECISION WIREWOUND RESISTORS, MIL-R-93/MIL-R-39005 STYLES:

Several of our popular types of precision wirewound resistors are listed below (many other form factors are available); request detailed electrical and mechanical specifications.

Most types are stocked in "standard" resistance values; any can be ordered in special values to suit your needs. Tolerances normally offered are: ±0.1%, ±0.025%, and ±0.01% (also ±0.005% in most types), with other accuracies furnished as required.

Be sure to ask for price lists covering the types in which you are interested; they show quantity pricing for both "standard" and other values.

Higher resistance values than those shown can be achieved in each type; please consult the factory or your local representative.

UNIQUE
ENGINEERING
FEATURES
Micro Machined Carbon Film Resistive Element
Low Noise Capless Lead Construction
Flame Retardant Non-Conductive Outer Coating

CAPLESS CONSTRUCTION
ideally suited to
HI DENSITY board population.
Permits close to
the shoulder bends.

ISKRA

NOW STOCKING

2% CARBON FILM RESISTORS
FUSE ACTION — NON FLAMMABLE

- Ceramic Caps. Discs, Feed Thru
- Ferrites
- Meters
- Motors, fractional H.P.
- Semi Conductors
- Switches
- Speakers
- Trimmer Pots

FEATURES

- △ High Stability
- △ Lowest Noise
- △ Smallest Dimensions
- △ Capless Design
- △ Meets MIL Specifications
- △ Extremely Long Life
- △ Produced And Checked By Automatic Equipment
- △ Failure Rate Less Than 10^8/Hour (MTTF More Than 10^8)
- △ Solderability as per MIL-STD-202
- △ Insulation Resistance Higher Than 10^9 Ohms
- △ Terminal Strength > 8 Lbs.
- △ Equivalents: MIL R-10509, MIL R-39, MIL R-11
- △ Color Code: MIL-STD-129
- △ Available With Weldable Leads

TOLERANCES AVAILABLE:

Absolute accuracy for— 1. Precision Resistors from ±5% to ±.0025%
2. Power Resistors from ±10% to ±.01%
Ratio Matching in resistor sets available as close as ±.001%

TEMPERATURE COEFFICIENTS:

1. Standard temperature coefficient is ±10PPM/°C, slightly higher for low ohmic values.
2. Temperature coefficients are avialable as low as ±1PPM/°C, over a limited range.
3. T.C. Matching available as close as ±0.5PPM/°C at +25°C for matched sets.
4. T.C. TRACKING available as close as ±1PPM/°C over a limited range.
5. Special temperature coefficients available from +80PPM/°C to +6000PPM/°C.

STABILITY:

Precision Resistors— 0.001% for the first year, 0.0025% over a three year period.
Power Resistors— 0.003% for the first year, 0.005% over a three year period.

ENVIRONMENTAL REQUIREMENTS:

All KRL wire wound resistors meet or exceed the requirements of—
1. MIL-R-93 and MIL-R-39005 for Precision Resistors
2. MIL-R-26, MIL-R-39007 and MIL-R-18546 for Power Resistors.

CHARACTERISTIC U: Coated or Molded resistors are available in any tolerance.

KELVIN Precision Wire-wound Resistors, Power Resistors & Resistor Networks

Kelvin is a pioneer in the field of very high stability, close tolerance, precision wire-wound resistors. Resistors shown represent only part of the broad Kelvin line. Complete catalog data is available on request.

HIGH RELIABILITY "HRL" SERIES

Kelvin's "HRL" Series was generated after years of experience on the Polaris, Gemini, Apollo and other important high reliability missile and space programs. Kelvin has combined the many and varied parameters of these programs into a single resistor series, designed to meet the stringent high reliability requirements of many of today's military and commercial systems.

Kelvin's reliability goal, through the design and controls of the "HRL" Series resistor and the use of acceptance inspection procedures, was to produce precision wire-wound resistors having failure rates better than .0005%/1000 hours at a 90% confidence level. Present level is .00064%/1000 hours at a 60% confidence level.

All "HRL" resistors have a documented history. This includes traceability from the spool analysis of the resistance wire, through each phase of the production operation to the finished product. Each resistor is screened to eliminate INFANT MORTALITY. This consists of a 100 hour burn in at full rated power at 125°C and a short time overload at twice the rated power. Other tests are conducted as outlined in Bulletin HR 02449, which presents the complete procedure and methods approach for production of "HRL" resistors.

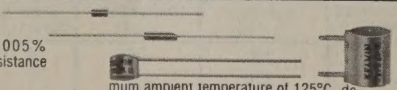
STANDARD TYPES



TOLERANCES: 1% through .005% available on most types and resistance values.

TEMPERATURE COEFFICIENT: ±20 ppm/°C standard.

T.C.s available to 1 ppm depending on size, value and temperature range.

WINDINGS: Non-inductive.

*WATTAGE RATINGS: Based on a maximum ambient temperature of 125°C, derated to zero watts at +145°C

**RESISTANCE MAX.: Contact factory for availability of values above maximum shown.

*All Lug Types available with #20 gauge radial leads (except EP-22) by specifying letter "R" after type number.

CATALOG #763 COVERS ALL PRODUCTS SHOWN ON THIS PAGE

KELVIN 5919 NOBLE AVENUE, VAN NUYS, CALIFORNIA 91411 TELEPHONE (213) 782-6662

FAST RISE TIME APPLICATIONS

''RT'' style resistors provide exceptionally high frequency performance, in addition to the other recognized advantages of wire-wound resistors. ''RT'' resistors can be supplied with rise times as low as 25 nanoseconds (from 10% to 90% of peak pulse amplitude at 100 KC), depending on resistance values and physical configurations. See Catalog #763

TOLERANCES: 1% through .005% available on most types and resistance values.

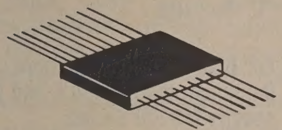
RESISTOR NETWORKS



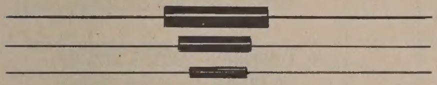
Kelvin develops and produces, to customer requirements, packaged resistor networks for use as voltage dividers, analog to digital converters, summing and integrator networks, binary resistive networks, R-2R ladders and special configurations.

Standard resistor networks in two series (R-2R and BCD) are available from catalog specifications. The potting, encapsulation and physical size flexibility of Kelvin resistors and case production techniques makes it possible to offer custome built units to exact customer requirements at reasonable prices. Our engineering department will review your requirements and submit price quotation and technical notes. 12 page Bulletin LN-37 available on request.

Electrical Characteristics Available: Nominal resistance ratio tolerance to ±.002% (DC). Resistance VDR ratio tolerances as close as .0005% (DC). Long term resistance ratio stabilities to ±.001% peryear. Low reactances to provide rise times as low as 25 nanoseconds. Temperature coefficients of resistors to track as close as 0.5 ppm/°C. from −55°C to +125°C.

SERIES KM MOLDED, POWER RESISTORS

Series KM are general purpose, reliable power resistors designed to be used where heat sinks are not available or not desired. These resistors are extremely stable for their size as compared to film types. Series KM are considered to have the lowest dollar per watt cost of precision resistors. Send for Bulletin K-1.



TOLERANCES: 0.025% through 5.0%

TEMPERATURE COEFFICIENT:

±20 PPM/°C (170 ohms and above)
±30 PPM/°C (10 to 170 ohms)
±50 PPM/°C (1 to 9.99 ohms)
±90 PPM/°C (below 1 ohm)

T.C.s to 5 PPM/°C available depending on size and value.

NON-INDUCTIVE STYLES: Reduce resistance values by approximately 50%; derate maximum working voltage by 30%. Add ''N'' to part number. Example: KMN025.

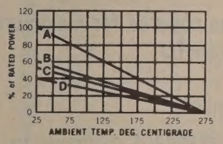
SERIES KC CHASSIS MOUNT POWER RESISTORS

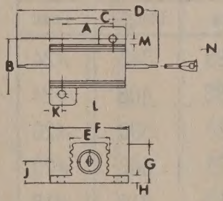
DERATING CURVES

Derating is required for reduced chassis mounting area and high ambient temperatures.

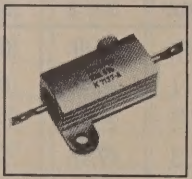
Curves:



A — When mounted on proper aluminum chassis:
48 sq. inches 0.040 aluminum for KC500 and KC1000
70 sq. inches 0.040 aluminum for KC2500
144 sq. inches 0.040 aluminum for KC5000



B — Unmounted KC500 and KC1000
C — Unmounted KC2500
D — Unmounted KC5000



Designed to provide maximum heat dissipation through heat sink and finned case configuration. Ideally suited where large amounts of power must be dissipated and small size is important. Capable of maintaining their precision tolerance in wattage ratings up to 50 watts. Send for Bulletin K-3.

TOLERANCES: 0.05% through 5.0%

TEMPERATURE COEFFICIENT:

±20 PPM/°C (170 ohms and above)
±30 PPM/°C (10 to 170 ohms)
±50 PPM/°C (1 to 170 ohms)

T.C.s tc 5 PPM/°C available depending on size and value.

NON-INDUCTIVE STYLES: Reduce resistance values by approximately 50%; derate maximum working voltage by 30%. Add ''N'' to part number. Example: KCN500.

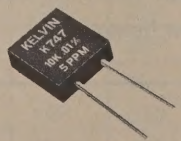
K747 WIRE WOUND RESISTOR

Lead Size:	#22 (.025) solder coated brass
Lead Spacing ℄ to ℄:	.150'' (±.010)
Wattage:	.3 watts
Voltage:	200 volts
Resistance Range:	.5Ω to 400KΩ
Resistance Tolerance:	1% thru .005%
Temperature Coefficient:	±5 PPM standard (0-85°C). Available to 1 PPM
TC Tracking:	Available to ±1 PPM/°C
Stability:	25 PPM/year
Rise Time:	25 nanoseconds
Noise:	Not measurable on commercially available equipment.
Environmental:	Exceeds all requirements of MIL-R-39005.

Designed specifically to interchange with Bulk Metal* film resistors. Comparable performance characteristics show the K747 resistor to be superior in almost all instances. Send for Bulletin K747 for complete specification details.



SIZE: .320±.020 H.
.295±.010 L.
.100±.015 W

*''Bulk Metal'' is a trademark of Vishay Intertechnology, Inc.

Kelvin pioneered the close tolerance, close temperature coefficient and excellent long term stability wire-wound resistor. State-of-the-art manufacturing techniques and superior testing capabilities yield the ultimate in quality at a competitive price. Please contact your nearest Kelvin representative or the factory direct for further details.

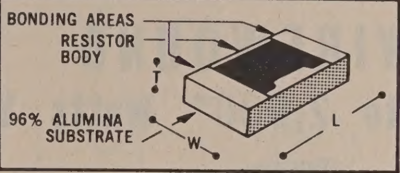
PRECISION THICK FILM CHIP RESISTORS

Mini-Systems has the widest selection of standard chip resistors tailored to fit assorted end uses including several Hi-Rel programs.

In hybrid construction many have found it cheaper, quicker, and easier to use Mini-Systems chip resistors for prototypes, production runs, "odd" high or low values, unique match and/or track specs, "tweak" or trim functions, and cross-overs. Size reduction and repairs are easily accomplished with MSI chip resistors. All resistors are designed to meet MIL-R-55342 requirements.

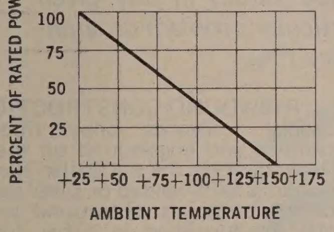


DESIGN GUIDELINES

NOTES:

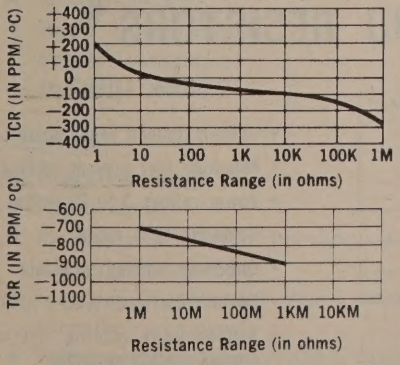
- Tolerances available: 1, 2, 5, 10, 20% for most resistance values.
- Delivery: stock to two (2) weeks.
- All types are available in untinned versions for conductive epoxy attachment.
- Hi-Rel screening available on all resistor types.
- Backside metalization available upon request.
- "Flip-Chip" resistors are solder-tinned (SN-62).
- Wire bond resistors have gold end-metalization optimized for wire bonding.

POWER DERATING CURVE



TEMPERATURE COEFFICIENT OF RESISTANCE

Actual TCR varies ±150 PPM/°C from typical, depending on geometry, materials and processing.



* Available in SN-62 Solder Tinned Version

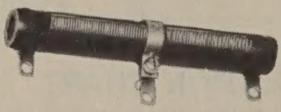
MRC MILWAUKEE
RESISTOR CORPORATION
700 WEST VIRGINIA STREET, MILWAUKEE, WI. 53204
Telephone: (414) 271-9900

WIREWOUND POWER RESISTORS

8 to 2,000* Watts Vitreous Enamel, Silicone or Cement Coated



★ STANDARD RESISTORS: 8 THROUGH 225 WATTS .... 8, 12, 20, 25, 50, 100 and 225 Watt, Vitreous Enamel in both FIXED and ADJUSTABLE (except 8 and 20 watt adjustable) are stocked in many ohmic values......*WRITE FOR STOCK LIST.......*

CUSTOM RESISTORS

36 additional wattage ratings are available with different core diameters and lengths. Non-Inductive, Tapped, Live Bracket, Porcelain Bushings, Printed Circuit Board and other specialty items are also manufactured to customer specifications.

MILWAUKEE will satisfy your resistor requirements with custom values, tolerances, temp. coefficient, sizes and coatings easily with it's engineering capabilites and production facilities.

TERMINALS

All 8, 12 and 20 watt fixed resistors are standard with 1½" tinned leads. They are also available with conventional lug terminals. 12 watt adjustable and 25 watt through225 watt fixed and adjustable have lug type terminals. Single and double quick connect and many other special types of terminals are also available.

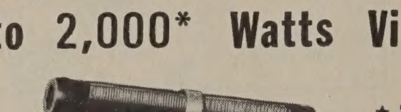
MOUNTING

Spring clips, vertical through bolts and horizontal "L" brackets are available for all 8 through 225 watt sizes.

Ferrule mountings, special spring clips, mica washers, terminal hardware and other accessories are also available.

WRITE FOR OUR CATALOG
WITH SPECIFICATIONS FOR
VARIOUS MOUNTING OPTIONS

RIBWOUND RESISTORS 40–2,000 WATTS



MILWAUKEE RIBWOUND RESISTORS ARE UNIQUE. . . . . The eveness of the crimping allows us to wind considerably higher ohmic values in any given wattage...........*If you have a particular problem or application - please contact our factory !*

APPLICATIONS

Particularly useful where high energy is to be dissipated in the lower ohmic values†. With it's ability to operate at higher temperatures - the ribwound is about ½ the size of the equivalent round wire resistor. Mounting options are the same as for wirewound.

† = MILWAUKEE'S EXCLUSIVE WINDING TECHNIQUES ALLOW AT LEAST 3 TIMES THE OHMIC VALUE MAXIMUM AS ARE NORMALLY AVAILABLE COMPETITIVELY !

COATINGS

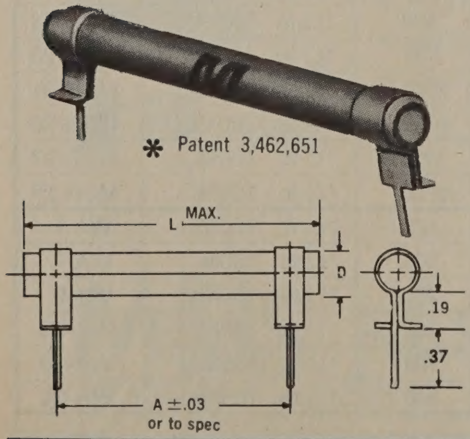
MILWAUKEE'S variety of coatings is particularly convenient for the manufacture of resistors for use in special atmospheres . . . .

LET US KNOW OF YOUR
SPECIAL REQUIREMENTS

RIBWOUND CONSTRUCTION

Special resistance alloy ribbon is crimped and edgewound on the core. Depending on the particular alloy, the ribbon is spot-welded or silver soldered to the terminals. Ribwound resistors may be furnished in either fixed or adustable type and can be cement coated. Several 300 watt values are stocked. All other sizes are made to order.

PCB PRINTED CIRCUIT BOARD RESISTORS *



FIXED PCB'S

WATTS	L	A	D	MAX. OHMS*
3	1	0.6	13/64	10,700
5	1¼	0.9	13/64	19,800
7	1⅝	1.3	13/64	32,000
10	2.1	1.7	13/64	44,000
15	2.1	1.7	5/16	68,000
20	2½	2.2	5/16	91,000

ADJUSTABLE PCB'S

WATTS	L	A	D	MAX. OHMS*
15	2	1.7	5/16	20,000
20	2½	2.2	5/16	27,000

*For higher ohms, consult factory.

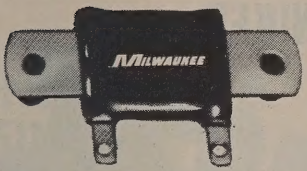
FEATURES

- Built-in standoff keeps board cool.
- Mounting feet prevent rocking.
- Power ratings 3 to 20 watts.
- Complete OHM range.
- One-piece, welded terminals
- Rectangular leads .020 x .040 in.
- Silicon base coating. Vitreous enamel coating available.
- Standard tolerance ±5%.
- 20 PPM upon request.

MRC | MILWAUKEE RESISTOR CORPORATION

700 WEST VIRGINIA STREET, MILWAUKEE, WI. 53204
Telephone: (414) 271-9900

OVALS

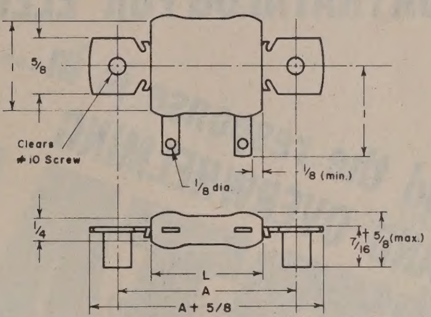


OVAL RESISTORS are for use where space saving is desired and where the use of the 'Heat Sink' function of the metal chassis, rack or panel may be employed. Resistance tolerance of ±5% is standard except on low resistance and multi-tapped units. **COATINGS** of vitreous enamel or silicone base are offered.

OVALS are available in regular or miniature sizes; an original development of MILWAUKEE Resistor.

Additional miniature oval core sizes are available increasing the possibility of taps and isolated sections. Other intermediate sizes are also available. Only regular ovals are available as adjustables.

REGULAR

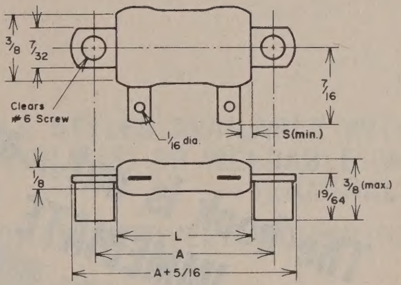


† 7/16" is standard.

WATTS†	OHMS	DIMENSIONS	
		A	L
30	1.3 - 7,300	2"	1 1/4"
40	.23 - 19,000	2 3/4"	2"
55	.17 - 41,000	4 1/4"	3 1/2"
70	.25 - 60,000	5 1/2"	4 3/4"
95	.32 - 78,000	6 3/4"	6"

†Rating based on mounting on steel panel 10" x 10" x .040".

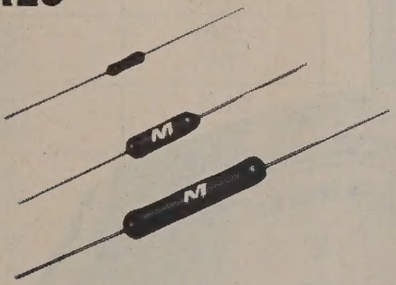
MINIATURE



WATTS*	OHMS	DIMENSIONS		
		A	L	S
10	.03 - 10,000	1"	3/4"	1/16"
15	.04 - 17,000	1 1/4"	1"	1/16"
20	.11 - 69,000	2 5/16"	2"	1/16"

*Rating based on mounting on steel panel 10" x 10" x .040.".

AXIALS



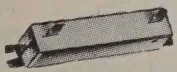
APPLICATIONS
- Electronic Circuitry
- Printed Circuits
- Radio, Television and Sound Reproduction
- Miniature Controls

CONSTRUCTION
- Wire Wound on Ceramic Core
- All Welded
- Vitreouse or Silicone Base Coating

FEATURES
- Rugged yet small.
- Highly stable.
- Matched expansion in core caps and coating for temperature stability.
- Standard 5% tolerance over 1 ohm, available in closer tolerances on request.
- Wattage ratings based on 325°C rise at 25°C ambient.
- Standard Sizes—3, 6.5, 11 watts.
- Leads Hot Tin Dipped.

Available in a variety of sizes from 1 watt through 11 watts on request.

METAL CASE *

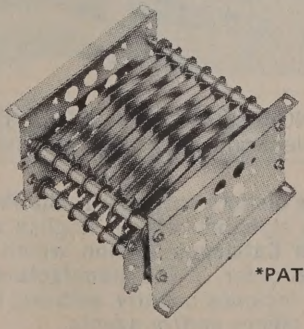


*PATENT 3,581,266

High Heat Sink—flush mounting dissipates heat.
20 to 100 Watts — higher on Specials
Quick Connect or Screw Terminals
Save: Space -First Cost- Assembly Cost

WRITE FOR ADDITIONAL INFORMATION

GRIDS *



Stud or Deck Mounted, MILWAUKEE'S patented grid system assures maximum heat dissipation & cooling.

*PATENT 3,212,045

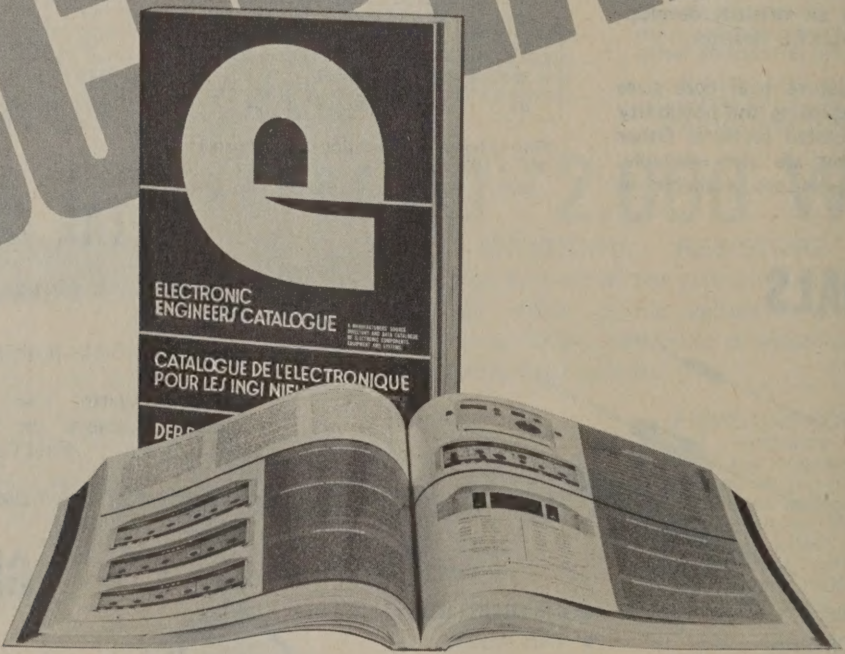
Pre-formed grid elements assure unidirectional stress motion. Custom design and construction features are most economical utilizing the exclusive MILWAUKEE patented grid system.

ELECTRONIC ENGINEERS CATALOGUE
CATALOGUE DE L'ELECTRONIQUE POUR LES INGENIEURS
DER PRODUKTKATALOG FÜR ELEKTRONIKER

The book is out...and the response is in...

IMMEDIATE AND OVERWHELMING

ACCEPTANCE



The ELECTRONIC ENGINEERS CATALOGUE is the only comprehensive, trilingual catalogue/source-directory of electronic products available to - and from - Western Europe and the United Kingdom.

It is divided into three distinct sections: 1. **The Product Index and Directory,** which lists more than 3,000 products alphabetically in English with their French and German equivalents. 2. **The Manufacturers' Catalogue Section,** which is a compilation of Manufacturers' Catalogues in alphabetical order. 3. **The Manufacturers' Sales Offices and Trade Marks Directory,** which alphabetically includes country, address, telex or TWX numbers of the Manufacturers' main and local sales offices and/or agents.

The ELECTRONIC ENGINEERS CATALOGUE offers U.S. manufacturers the most cost-efficient method of distributing their catalogue data to **25,000** electronic engineers and buyers throughout Western Europe and the United Kingdom. It represents the carefully conceived application of the time-proven **eem** "cataloging" concept to the elusive European marketplace.

SAGE/NYTRONICS RESISTORS

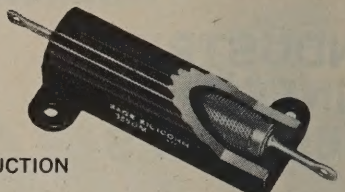
INDUSTRY'S FINEST RESISTORS . . . Commercial, Military, High Reliability

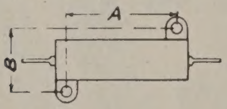
TYPE M METAL CLAD CHASSIS MOUNT RESISTORS



TYPE M CONSTRUCTION

Aluminum housed resistors for heat sink mounting. Meet or exceed requirements of MIL-R-18546D. Dielectric strength to 2500 volts rms.

All dimensions are inches nominal. Complete specifications available on request.



STYLE	Rating Watts	A	B	Max. Resistance Ω Regular Winding	Max. Resistance Ω Non-Induct.
3105M	8	.444	.490	24,000	8,400
3010M	14	.562	.625	30,000	10,500
3225M	25	.719	.781	71,000	25,000
3550M	50	1.562	.844	230,000	80,000

M suffix designates regular single layer wind.
NM suffix designates non-inductive wind.

TYPE MB HIGH WATTAGE

BERYLLIUM OXIDE CORES

STYLE	RATED WATTS 25°C ambient chassis mounted	RATED WATTS 25°C ambient free air
3105 MB NMB	15	6
3010 MB NMB	20	8
3225 MB NMB	35	14
3550 MB NMB	50	20

MB suffix designates regular single layer wind, NMB non-inductive wind.

MIL-R-26E TYPE DESIGNATIONS

EXAMPLE:

RW69	V	471
Body Style	Characteristic, V only (350°C max.)	Nominal resistance, Ω. Two significant digits plus third indicating number of zeros. Below 10ΩR = decimal and last digit is significant.

TOLERANCE: ±5% for values 1Ω and up; ±10% below 1Ω.
TC: ±260 ppm/°C 20Ω and up; 400 ppm/°C below 20Ω.

MIL-R-18546D TYPE DESIGNATIONS

Example:

RE65	G	1001
Style	Characteristic, 275°C Max. G for regular inductive winding N for non-inductive winding	Nominal resistance, Ω. ±1% only. Three significant digits plus fourth indicating number of zeros. Below 100Ω R = decimal and following digits are significant.

T.C. ±30 ppm/°C 2000Ω and above
±50 ppm/°C under 2000Ω

MIL STYLE	SAGE STYLE	MIL WATTS	DEFINED OHMIC RANGE Min.	DEFINED OHMIC RANGE Max. (.001 wire)
RE60G	3105M	5	.1	3320
RE60N	3105NM	5	1.0	1650
RE65G	3010M	10	.1	5620
RE65N	3010NM	10	1.0	2800
RE70G	3225M	20	.1	12100
RE70N	3225NM	20	1.0	6040
RE75G	3550M	30	.1	39200
RE75N	3550NM	30	1.0	19600

CONSIDER THESE RESISTOR FEATURES:

- Wattage Rating, ½ to 50 watts
- T.C. 20 ppm/°C or 10 ppm/°C
- 1000 volt rms body insulation
- Characteristic U or V wattage rating: to 275°C or 350°C
- Power load life stability <.5%/1000 hours
- Weldable leads when specified
- Non-inductive winding when specified

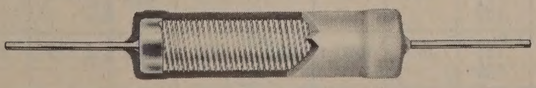
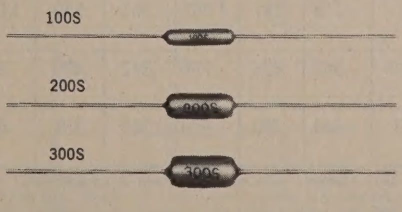
is supplied on all sizes unless otherwise
specified on purchase order.



*Except 250S and 500S Styles, which are 1½″ minimum.

MINIATURE TYPE S "CORDWOOD" SERIES

1, 2, 3 watt .4 inch body length



OHMITE® series 89 metal-mite™ resistors

FEATURES

- Molded construction
- Screw type mounting on housing
- Chassis design utilizes heat-sink effect
- Conventional power ratings produce high stability
- Housing surface allows for easy identification
- 5 through 50 watt models with standard or non-inductive winding

OHMITE Type	MIL-R-18546 Type	Power Rating* Watts OHMITE**	MIL	Resistance Ranges (Ohms) 1% Tolerance	Standard Temperature Coefficient Value Ranges (Ohms) ±90 ppm	±50 ppm	±20 ppm

*Rating is based on chassis mounting area and stability proper heat sink.
4 x 6 x 2 x .040 aluminum chassis for 5 and 10 watt units
5 x 7 x 2 x .040 aluminum chassis for 25 watt units
12 x 12 x .059 aluminum panel for 50 watt units

**Types 8905 and 8910 will be stamped with wattages shown in parentheses but will be stamped with higher ratings upon customer request.

DERATING

Series 89 resistors have an operating temperature range of −55°C to 275°C. Derating is required for reduced chassis mounting area and high ambient temperatures. The following curves apply to operation of unmounted resistors:

A = 5 and 10 watt units
B = 25 watt units
C = 50 watt units

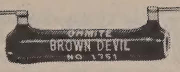
OHMITE® type 200 *brown devil®* fixed resistors



SERIES 200

BROWN DEVIL® (Type 200) resistors, are vitreous enameled, wirewound units long famous for ruggedness and durability in small power resistors. With the emphasis towards miniaturization and the current industry trend towards higher operating temperatures, Ohmite has been able to increase the ratings on two Brown Devil sizes. The 5 watt size is now rated **8 watts** and the 10 watt size is now rated **12 watts**. The 20 watt unit retains the same rating. The higher ratings may be confidently applied to any 5 or 10 watt unit now in the possession of users or distributors. At this time also, to meet the demand for lower wattage units, Ohmite introduces two, new, small stock sizes — 3 and 5¼ watts.

Standard resistance tolerance is ±5% for values 1 ohm or higher; ±10% for values below 1 ohm. Tinned leads 1½" long: 3 and 5¼ watt, 20 AWG; 8, 12 and 20 watt, 18 AWG.

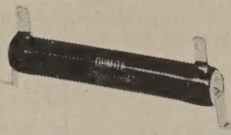
OHMITE® type 270 vitreous enameled fixed resistors



SERIES 270

These lug type resistors are wire-wound on high quality ceramic cores, protected and insulated by Ohmite vitreous enamel — the time-proved standard covering that is the best conductor of heat for a material which must also be a good electrical insulator.

Resistance tolerance is ±5% for values 1 ohm or higher; ±10% below 1 ohm.

Wattage ratings are for use in free air. When resistors are mounted in closed spaces or where the circulation of air is restricted, they should not be used at more than one-half rating. Currents and voltages for reduced ratings can be obtained by multiplying full rating by the following factors: 75% load = .86, 66% = .81, 50% = .71, 33% = .57, 25% = .50.

Mounting brackets are automatically supplied in individual unit packs; supplied only when specified in bulk pack orders. See page ??, "Mounting Brackets for Tubular Resistors" to specify other brackets.

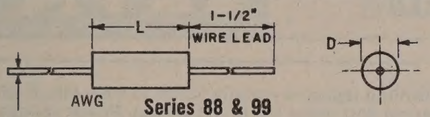
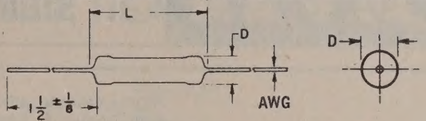
OHMITE® wirewound resistors / axial lead and pc series



Series 88 & 99



Series 22, 44, 56 & 57

OHMITE WIRE WOUND AXIAL LEAD RESISTORS

All of Ohmite's axial lead resistors feature a high quality resistance wire, single layer wound on a cylindrical ceramic core, and welded to metallic end caps. The leads are solder coated, weldable wire 1½" long. Specific mechanical and electrical parameters are listed in appropriate descriptions and tables for the individual Series below.

AXIAL LEAD WIREWOUND RESISTOR SPECIFYING GUIDE

HOW TO ORDER

MOLDED — For Series 88 and 99, specify style, resistance and tolerance.
CONFORMAL — Specify these Product Numbers:

56 1 S R5000 J

OHM E SERIES NUMBER
This identifies the basic resistor construction.

WATTAGE
1 = 1W 5 = 5W
2 = 2W 6 = 6W
3 = 3W 7 = 7W
4 = 4W 0 = 10W or more

MISCELLANEOUS SPECIFICATIONS
S = Standard winding
N = Non-inductive winding
P = Standard winding with actual wattage rating more than indicated
T = Non-inductive winding with actual wattage rating more than indicated

TOLERANCE
A = ±.05%
B = ±.1%
W = ±.125%
C = ±.25%
D = ±.5%
} Not available for non-inductive types
F = ±1%
G = ±2%
H = ±3%
J = ±5%

RESISTANCE VALUE

Resistance value is identified by four digits and one letter.
Resistance is expressed in ohms with the letter "R" signifying a decimal point. "R" is used in all resistance values lower than 1000 ohms. The letter "K" indicates multiples of 1000 ohms.

This chart provides all basic data needed to specify the right axial lead wirewound resistor for your circuit application. Refer to application guide to select the proper resistor based on your key specifying parameters.

VITREOUS ENAMEL

Series 99
Hi-Heat Dissipation
Molded Construction
MIL-R-26

Series 99 & 22
Severe Humidity Protection
Resistant to All Solvents
Industrial Applications

FLAMEPROOF CERAMIC

Series 57
Flameproof
Severe Environments
Immune to Fungus Growth
High Overland Design

SILICONE CERAMIC

Series 88
Molded Construction

Series 56
MIL-R-39007

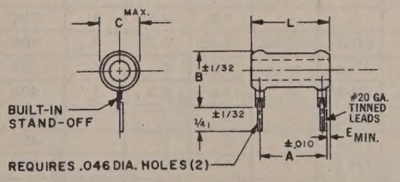
Series 44, 88 & 56
Low TC
Close Tolerance
High Heat Dissipation
Industrial Applications

Series 88 & 56
High Stability
Small Size/
High Heat Dissipation

Ohmite can supply resistors for applications requiring high reliability performance characteristics per MIL-R-39007.

- Meets MIL-R-26 Where Applicable
- Popular Values of Series 88, 99 and 44 Available from Stock
- Lead Taping Available
- Higher and Lower Resistance Values other Than Those Listed Above are Available. Consult Factory.

RADIAL LEAD RESISTORS FOR P.C. BOARDS



Resistance Element: Resistance wire single layer wound on a tubular ceramic core and welded to lug bands.

Terminals: Radial, wire leads welded to lugs on centers to fit standard 0.1 inch matrix boards. Built-in standoff.

Coating: Vitreous enamel or Ohmicone (silicone-ceramic).

Marking: Ohmite code and resistance value (ohms) on top opposite leads.

Tolerances: Vitreous (Type 270) ±5%, 1 ohm and higher — ±10%, below 1 ohm. For closer tolerances, specify Type 474 (Ohmicone).

Temperature Coefficient: Less than 260 PPM/°C — Lower temperature coefficient available in Type 474 (Ohmicone).

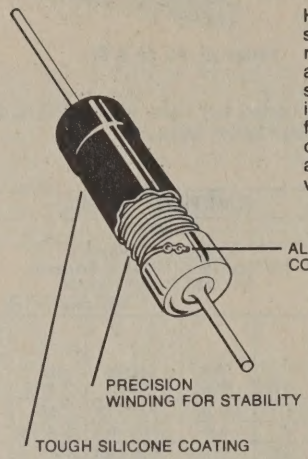
OMI

POWER WIREWOUND RESISTORS
SILICONE COATED



Highly reliable, silicone coated, precision wirewound resistors manufactured to meet MIL-R-26 specifications. Available with axial leads (T series) and radial leads (TR series). Power ratings range from ½ to 15 watts and resistance ranges from .05 ohms to 275K ohms. Resistance tolerances from .05% to 5% (1% standard). Temperature coefficient of resistance 2PPM up (20PPM, standard). F Series resistors—at ratings from 1 to 15 watts—offer greatly increased power ratings over conventional resistors of equivalent size. F Series are available in resistance ranges from 0.1 ohm to 250K ohms. Both T and F Series resistors have an operating temperature range of −55°C to 275°C (characteristic U) or to 350° (characteristic V). Derating is required for high ambient temperatures. T and F Series are also available with non-inductive windings. (maximum value for non-inductive type is 50% of values for standard resistors)

25 WATT
50 WATT

HT Models are anodized, aluminim-housed, precision wire-wound resistors, designed to chassis mount for maximum heat dissipation. They are manufactured to meet or exceed MIL-R-18546 specifications. Seven sizes: 5 to 250 watts (mounted), resistance ranges from .1 ohm to 250K, depending on size. Tolerances —1% standard —.05% available. Temperature coefficient from 2PPM up. (20PPM, standard).

HF Models are identical in dimensions, resistance ranges, tolerance and temperature coefficients with those of the HT Series, but offer a great increase in their power ratings.
All HT and HF resistors are available with non-inductive windings (maximum value for non-inductive type is 50% of value for standard resistors).

OMI TYPE		MIL TYPE	Power Rating (Watts)*			Resistance Range		Max. Working Voltage		Max. Weight Grams
			HF (OMI)	HT	MIL	MIN.	MAX.	HF	HT	
HT-5	HF-5	RE-60	15	5	5	.1	22K	220	160	3
HT-10	HF-10	RE-65	20	10	10	.1	47K	340	265	7

FIXED
Also available with multiple taps
ADJUSTABLE
OVAL, STACKING TYPE
Also available with multiple taps

WIDE RANGE OF SIZES
FAMILIAR GREEN JACKET • TIME PROVEN DEPENDABILITY & SERVICE

FIXED

FIXED type vitreous enamel resistors are wire-wound on high quality ceramic cores, protected and insulated by the familiar green vitreous enamel jacket that is outstanding as an insulator and heat conductor.

Reduce maximum res. 50% for non-inductive winding. Resistance tolerance is 5% on 1 ohm or higher; ±10% below 1 ohm.

ADJUSTABLE

ADJUSTABLE type make ideal voltage dividers in transmitters, rectifiers and similar equipment both original and replacement. Also handy for obtaining odd resistance values. Standard wattage rating applies only when entire resistance is in the circuit. Power is reduced proportionately by the position of the adjustable lug.

Resistance tolerance is 10% of total resistance value.

TYPE	WATTAGE RATING	MAX. RES.	MIL-R-26 STYLE	LENGTH (±1/16)	O.D.	I.D. (±1/32)

OVAL, STACKING TYPE

OVAL, STACKING TYPE are space savers. Wound on an oval core, they provide more wattage with less bulk in less space. Metal mounting pieces extend through the core to distribute and conduct heat directly to the mounting surface. Reduce power ratings by 15% when mounted on non-metallic surface.

Resistance tolerance is ±5% on 1 ohm or higher; ±10% below 1 ohm.

TYPE	WATTAGE RATING	MAX. RES.	MIL-R-26 STYLE	WIDTH	CORE LENGTHS	MOUNTING CENTERS
FO-30	30	10K	RW-20	1-3/16	1-1/4	2
FO-40	40	25K	RW-21	1-3/16	2	2-3/4
FO-55	55	30K	RW-22	1-3/16	3-1/2	4-1/4
FO-70	70	40K	RW-23	1-3/16	4-3/4	5-1/2
FO-95	95	55K	RW-24	1-3/16	6-3/4	6-3/4

*Minimum resistance is .1 ohm for all models.

**FIXED lug type and OVAL, STACKING TYPE resistors are available with *non-inductive windings and multiple taps.* Maximum resistance value for non-inductive type is 50% of values for standard fixed resistors.

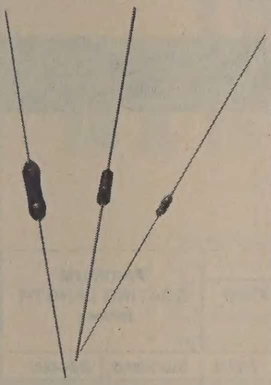
Panasonic

FIXED RESISTORS

TYPE ERD (⅛, ¼ & ½ W) CARBON FILM



- Small size
- High stability
- High reliability
- Low noise
- Low temp. coefficient
- 1%, 2%, 5% tolerance

Panasonic has been producing the most reliable carbon film resistors for 45 years. This background, plus 20 years of modern mass producing experience in producing conventional standard types, has led to these new miniature standard carbon film resistors — which are unequalled for reliability and performance characteristics.

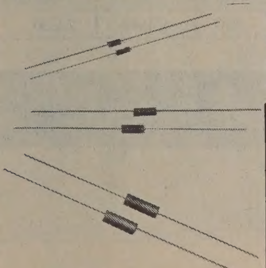
Note 1: Rated Continuous Working Voltage (RCWV) shall be determined from
$\text{RCWV} = \sqrt{\text{Rated Power} \times \text{Resistance Value}}$, or Max. RCWV listed above, whichever less.

TYPE ERC (⅛, ¼ & ½ W) CARBON COMPOSITION



- Full range of standard values — from 2.2 ohms to 22 megohms
- Special high values on request
- High reliability
- Rugged construction
- Uniform quality

Panasonic has been producing carbon composition resistors for over 26 years. Our carbon composition types are now being produced by a hot-molding process on automatic machines recently developed and used only by Panasonic. These resistors, when used as specified, will not open-circuit nor exhibit erratic changes in value.

Type No.	Power Rating (W) @ 70°C	Max. RCWV (Note 1)	Max. Overload Voltage	Dielectric Withstanding Voltage	Res. Tol. (%)	Resistance Range (Ω)		Std. Res. Values	Dimensions: mm (inch)			Equivalent Type No.

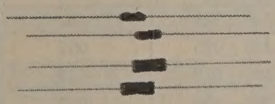
Note 1: Rated Continuous Working Voltage (RCWV) shall be determined from
$\text{RCWV} = \sqrt{\text{Rated Power} \times \text{Resistance Value}}$, or Max. RCWV listed above, whichever less.

TYPE ERO (¼ & ½ W) METAL FILM



- Standard tolerance: 1%
- Temperature coefficient of 100 ppm (CKF Series) and 50 ppm (CHF Series)
- Meet standards of MIL-R-10509 (RN-60 and RN-65)
- Excellent humidity characteristics
- Solvent proof coating

With over 16 years of experience in mass producing metal film resistive elements and over 2 billion hours of component use, Panasonic has been able to lead the way in producing the new, small-size, standard metal film resistors essential for meeting MIL specs.

PRC
PRECISION
WIREWOUND
RESISTORS

PRC CONTINUES A TRADITION IN PRECISION WIREWOUND RESISTORS WITH...

- **Low-priced/space-saver Type TX:**
  Hundreds of physical sizes for Commercial/Industrial applications in any ohmic value desired.
- **Best-selling high precision Type SX:**
  Military types in any resistance value as well as *higher* or *lower* values and TCR Characteristics beyond the MIL limits.
- **Ultra high precision Type HR:**
  Excellent time stability for matched tolerances and TCR Characteristics as well as economical single or multiple secondary standards.
- **Sub-miniature precision power Type SM:**
  Any ohmic value to ±0.05% tolerance, especially inexpensive low shunt values in 2 or 4 terminal designs to 10 watts.
- **Standard Mil style lug and radial lead Bobbin Types:**
  Ideal as exact interchangeable parts for replacement specs or production quantities.
- **Resistance-temperature devices (RTD's):**
  Any resistance and positive TCR Char. combination for temperature compensation or sensing from +20ppm to +0.6% change in resistance per degree C. Also, devices are furnished either uncoated, coated or encapsulated into a metal sheath to meet your physical requirements exactly.

B-10-ER	RWR 84	.312 ±.031	.875 ±.062	7	12.4K	.040	7.92	22.23

Resistance Tolerances Available: .1%, .5%, 1.0%.
Lead Length: 1½″ minimum.
Standard Coefficient: ±20 PPM/°C.
Non Inductive Winding: Add Suffix N. (divide maximum resistance values by 2)
If solderable leads are required use Suffix S.
If weldable leads are required use Suffix W.

A completely controlled process is used for the manufacture of established reliability units. Every unit is documented and traceable with quality control data. A 100 hour burn-in at rated wattage is performed. Failure rates test results are available.

APPLICABLE MIL-SPECIFICATIONS
MIL-R-39009: Meets or exceeds military specifiications covering aluminum housed, chassis-mounted resistors.

Dielectric Strength:
1000 Volts AC on AL-5 AL-10
2500 Volts AC on AL-25, AL-50

Insulation Resistance:
10,000 megohms minimum dry.

RCL Electronics

SERIES T

silicone coated axial power wire-wound resistors

General Specifications Available:

☐ **Standard Temperature Coefficient:**
Standard T.C.:

±20 PPM/°C. 500Ω up	±30 PPM/°C 10Ω to 499Ω
±50 PPM/°C 1Ω to 9.9Ω	±90 PPM/°C below 1Ω

Lower ohmic values require higher T.C.'s, consult factory for information on specific applications.
Consult factory for lower temperature coefficient requirements.

☐ **Tolerance:** ±1.0% is standard. Closer tolerances available. Closer tolerances may necessitate lowering maximum resistance; consult factory for specifics.

☐ **Wattage Range:** ½ watts to 14 watts.

☐ **Standard Resistance Values:** From 0.1 ohms to maximum values as stated in table. For values below 0.1 ohms consult factory.

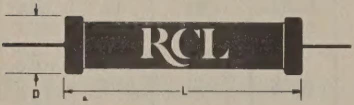
☐ **Coating:** RCL's proprietary silicone coating withstands moisture, salt water immersion, and cleansing solutions. It will withstand continuous operation up to 400°C.

☐ **Leads:** Tinned copperweld is standard.

☐ **Dielectric Strength:** 500 VAC for T-½A through T-1C, 1000 VAC for all others.

☐ **Insulation Resistance:** 5000 Megohms minimum at 100 volts D.C.

☐ **Wide Temperature Range:** From −65°C to +275°C (Characteristic U) or +350° (Characteristic V).

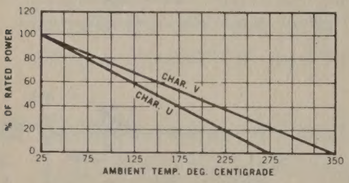


POWER RATINGS:
The RCL "T" Series has two power ratings, depending on operating temperature and stability requirements:

CHARACTERISTIC U: 275°C maximum hot-spot temperature.

CHARACTERISTIC V: 350°C maximum hot-spot temperature.

DERATING:
RCL Series "T" resistors have an operating temperature range of −65°C to +275°C (Characteristic U), or to +350°C (Characteristic V).



Ultra-fast delivery for prototypes and initial production needs.

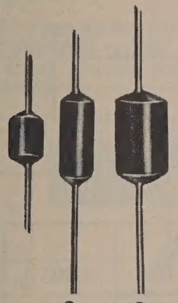
low-cost wire-wound resistors for commercial/industrial applications



RCL Commercial line — low cost, precision wire wound resistors for test equipment, instruments, industrial controls, communications equipment. All the benefits of wire wounds — low T.C., high stability, close tolerance.

- Price competitive with comparable metal film resistors
- Standard T.C. = ±10 PPM/°C
- Special T.C.'s available on request
- High temperature epoxy coating provides moisture protection
- Lead Length: 1½" (38.1mm) minimum
- Wattage rating at 60°C ambient; derated to zero at 105°C
- Low noise
- Molded-in leads for structural strength
- Tolerance Available: ±1.%, 0.5%
- Non-inductive winding available on special order

E-30	.5	0.1 ohm	25K	.25	.75	#20

subminiature wire-wound resistors

These extremely small, encapsulated resistors meet and exceed the specifications of MIL-R-93. Special RCL techniques also allow the production of custom sizes at minimal cost to the customer.

Tolerances available: from ±1.0% to ±0.001%.

Temperature coefficient: Standard is ±10 PPM/°C.

Temperature coefficients available as low as ±2 PPM/°C.

AL-50	1.562	.845	1.970	2.780	.615	1.135	.615	.087	.125	RE-75

FEATURES

- Molded and welded construction
- Screw mounts on chassis
- Exceptionally high stability at all conventional power ratings
- Utilizes heat-sink effect of chassis
- Clearly marked on top surface of housing for ease of identification after mounting
- Exceeds MIL-R-18546
- Complete protection against environment

NON INDUCTIVE STYLES: (Series "AL" and "ALB") The same physical and electrical specifications are available with non-inductive winding. They are identified by adding the letter N after the AL identification.

ALB-50	RE-75	50	30	.01 to 273K	1400	29

* Rating based on chassis mounting.

MATERIAL

Core: Steatite, or Alumina Ceramic.

Resistance Wire: Nichrome wire (800Ω/CMF) is standard; other alloys used when required.

End Caps: Stainless steel.

Sealant: Molded construction.

Housing: Anodized Aluminum.

Terminals: Tinned copperweld.

Flame Retardant Construction: Available on special order.

POWER RATING

Both AL-100 and AL-250 Series ratings based on the following requirements:

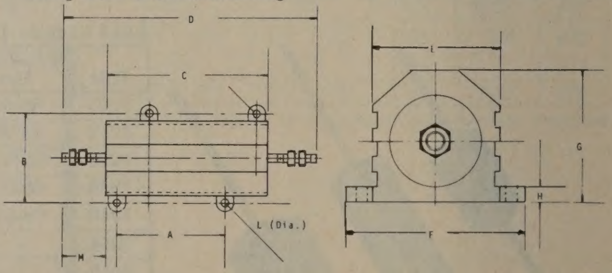
A. 275°C maximum internal hotspot temperature.

B. 1% maximum △R in 1000 hour load life.

C. Proper heat sink: 12" x 12" x .125 Aluminum Panel.

D. Derating:

1. Operating temperature range of −55°C to +275°C.
2. Derating is required for reduced chassis mounting area and for high ambient temperatures.



ELECTRICAL SPECIFICATIONS

Tolerance: ±1.0% is standard. Available to ±.05%. Closer tolerances may necessitate lowering maximum resistance. Consult RCL for specifics.

Standard T.C.:
±20 PPM/°C. 500Ω up
±30 PPM/°C. 10Ω to 499Ω
±50 PPM/°C 1Ω to 9.9Ω
±90 PPM/°C. below 1Ω

Lower ohmic values require higher T.C.'s. Consult factory for information on specific applications.

Dielectric Strength: 5500 VAC on AL-100 and AL-250.

Insulation Resistance: 10,000 megohms minimum dry.

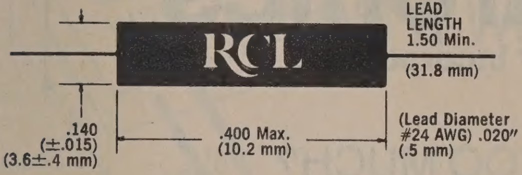
precision wire-wound fuse resistors

NOW . . . a dual-purpose device that performs the functions of acting both as a precision wirewound resistor and a fuse. Precisely controlled characteristics . . . stable accurate resistance . . . allows precise control of fusing point and time lag.

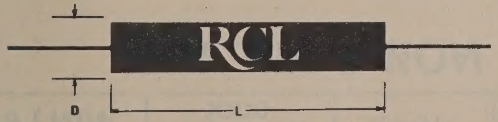


GENERAL SPECIFICATIONS ON 500 SERIES
Resistance Range: 0.2Ω-200Ω
Resistance Tolerance: 10%, Std, 5% and 2% available
Blow Characteristics: Consult factory
Steady-State Conditions: Consult factory
Operating Temperature: −55°C to +150°C
Temperature Coefficient: ±50 PPM/°C Max

CONSTRUCTION FEATURES
- Single Fusing Element — All Welded Connections
- Ceramic Shell — Air Encapsulation
- Meets or Exceeds MIL-R-26 Environmental Conditions-Specifications
- Intrinsically Safe — Ceramic Bobbin — Single Layer Wound

RCL designs and manufactures standard (F500 series) and special fuse-resistors to customer requirements. The fuse resistor acts both as a precision wirewound resistor and as a fusing element with precisely controlled characteristics.
- Affords protection for semiconductor devices
- Reduces the number of discrete components required
- Eliminates fire hazard and circuit board damage due to overheated components
- Eliminates unnecessary blowing due to transient conditions

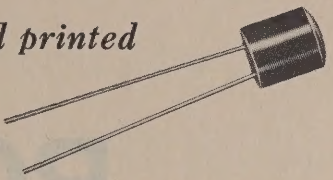
RCL high positive TC resistors



RCL has developed its own proprietary special alloy resistance wire which gives the unusually high positive TC of silicon, together with the basic advantages of resistance wire which are:
- Provides temperature compensation.
- Much greater stability for digital and linear integrated circuits.
- Closer resistance tolerances.
- Broader range of resistance values.
- Operating temperature range from −55°C to +150°C.
- Derated to zero watts at 150°C.
- Lead length 1½″(±⅛″; mm lead length 38.1 (±3.2mm).

RCL Type #	Competitive 'SENSISTOR' Type #	Diam. ±.015	Length ±.015	RCL Resistance Range	'SENSITOR' Resistance Range	Lead Diam. AWG.
8000	TM ⅛	.140	.406	1 Ohm to 10K	10 Ohms to 6K	#22
8001	TM ¼	.200	.585	1 Ohm to 20K	10 Ohms to 10K	#22

RCL wire-wound printed circuit resistors



△ All welded construction.

△ All resistor wire terminations are made at the top of the resistor rather than at the bottom. This does the following:
a. protects the joints from damage when submerged in a solder bath.
b. by placing these joints as far away as possible from the solder bath, the body acts as a heat sink and thus these terminations are given additional protection.
c. this design generally applies to values of 2K and above.

△ Custom designs on special order.

△ Different lead spacing can be furnished on request.

△ Non-inductive winding available.

Lead Length 1¼″ Minimum. Tinned, weldable leads.

special temperature coefficient wire wound resistors

- Applications include transistor circuits, zener diode temperature compensation, temperature measuring devices.
- Available in a range of temperature coefficients from −50 PPM/°C. to +6,000 PPM/°C.
- Values range from 10 ohms to 5 megohms.
- All available with axial or printed circuit leads.
- Available in all physical sizes.
- All meet applicable paragraphs of Mil-R-93D.

SPECIAL TEMPERATURE COEFFICIENTS AVAILABLE.

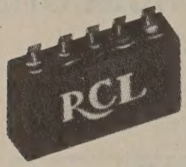
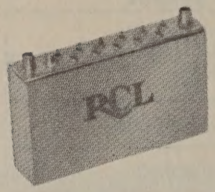
precision resistance networks





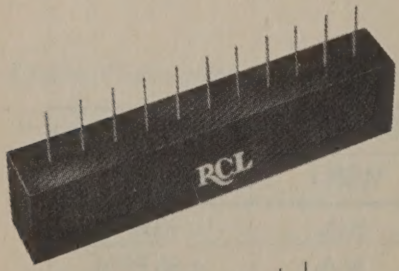
RCL designs, develops and produces packaged resistance networks to individual customer requirements.

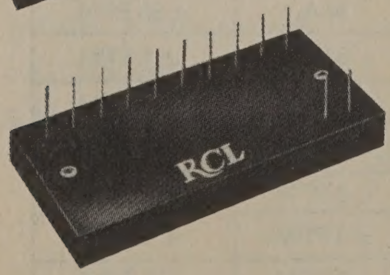
A high degree of sophisticated packaging plus miniaturization techniques are available from RCL's network engineering specialists. Typical custom designed networks are shown here.

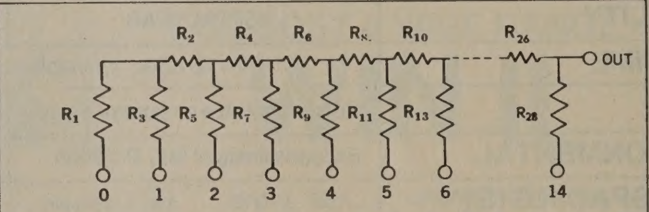
General Specifications Available:

- Absolute resistor tolerances to ±.002%
- Ratio tolerances to ±.001%
- Temperature coefficient match and tracking between resistors within ±1 PPM/°C from −0°C to +85°C
- Long term stability of .001% the first year and .002% over a three year period
- Low reactance and rise times as low as .02 microseconds
- AC resistance match at frequency determined by user
- In AC converter networks, capacitance can be matched to 0.01 MMFD with a shielded network.

ladder and summing networks





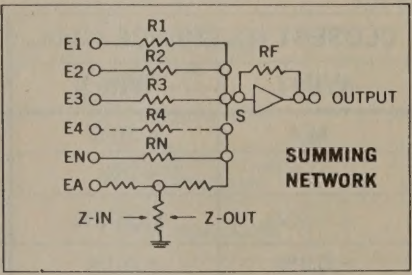


Resistors: R_1, R_3, R_5, R_7, R_9, R_{11}, R_{13}, R_{15}, R_{17}, R_{19}, R_{21}, R_{23}, R_{25}, R_{27}, R_{28}; each = 2R

Resistors: R_2, R_4, R_6, R_8, R_{10}, R_{12}, R_{14}, R_{16}, R_{18}, R_{20}, R_{22}, R_{24}, R_{26}; each = R

RCL makes available ladder networks in both standard and miniaturized versions

- Maximum total error less than ½ of the smallest word input combinations
- Modular construction
- Interchangeable sub-assemblies



General Specifications Available:

- Ambient operating temperature range . . . −55°C to +125°C
- Error . . . Under .50 of the least significant bit for every input combination
- Resistance Values: 500Ω to 100K
- Output accuracy to ±.01% and ±2 PPM/°C
- Up to 14 bits available
- Wire Wound precision resistors of matched characteristics result in high stability

If you have a network problem, send us your complete specifications for a prompt and detailed proposal.

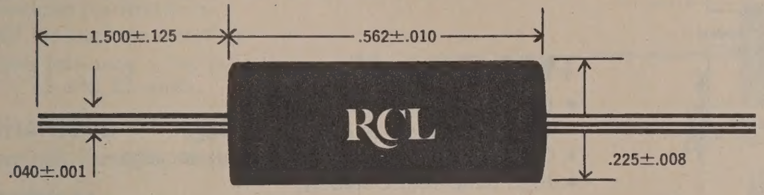
low cost 2 watt molded wire-wound resistors



TYPE BWR

A general purpose, extremely economical wire wound resistor. Type BWR covers three different wattage requirements in one size resistor.

BWR resistors offer wire wound stability, negligible noise and no catastrophic failures for 2, 1 and ½ watt applications. Significant cost savings may be obtained over Fixed Composition Resistors in the categories of 1 watt 5% tolerance, 2 watt 5% and 10% tolerances.

PERFORMANCE CHARACTERISTICS

REQUIREMENT	TYPICAL BWR R LESS THAN	MAXIMUM BWR △R
Temperature Coefficient 0.1Ω - 0.16Ω	+0.08%/°C	+0.1%/°C
0.10Ω - 0.62Ω	+0.06%/°C	+0.08%/°C
0.68Ω - 2400Ω	±0.02%/°C	±0.04%/°C
Low Temperature Operation	±1.5%	±3%
Temperature Cycling (−55°C to +125°C)	±1.5%	±5%
Moisture Resistance	±3%	±5%
Short Time Overload (8 Watts)	±1.5%	±4%
Load Life	±5%	±10%
Terminal Strength	±1%	±2%
Resistance to Soldering Heat	±2%	±4%
Shock	±0.5%	±2%
High Frequency Vibration	±1%	±2%

"Typical △R less than" is defined as the maximum △R to be expected in 95% of the population of a distribution.

NOTES:

1. Because of inaccuracies common in measuring low resistance values, an allowance of 0.01Ω should be added to the %△R limits.
2. Test conditions are as specified in MIL-R-11 and MIL-STD-202 except where shown in parenthesis.
3. For indication of approximate inductance values, consult factory.

SPECIFICATIONS

MIL-R-11 Style Equivalent for Physical Size Only: RC32

Resistance, Standard: 0.10Ω thru 2400Ω.

Resistance Tolerances, Standard: ±5%, ±10%.

Power Rating: 2 watts @ 70°C
1 watt @ 115°C
½ watt @ 137°C; derating to 0 @ 160°C

Maximum Continuous Working Voltage: $\sqrt{PR}$

Minimum Insulation Resistance — Dry: 10,000 Megohms

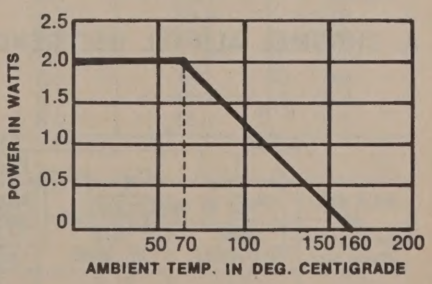
Minimum Insulation Resistance — Wet: 100 Megohms

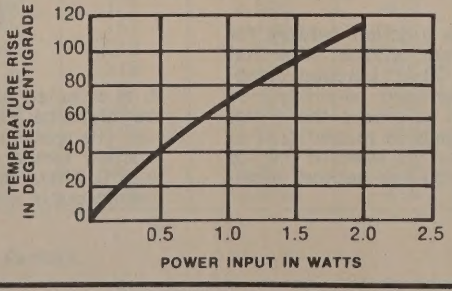
Minimum Dielectric Withstanding Voltage: Atmospheric Pressure 1000 Volts R.M.S.; Reduced Pressure 625 Volts R.M.S.

Hot Spot Temperature Rise at 2 Watts: 115°C

Current Noise: Negligible

DERATING CURVE TEMPERATURE — POWER

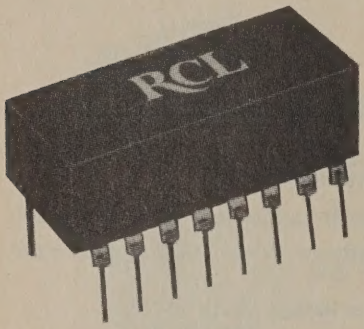


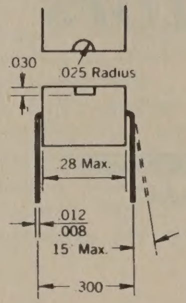


SURFACE TEMPERATURE RISE AT HOT SPOT VS. LOAD

AMF
RCL Electronics

wire-wound networks (dual-in line package)



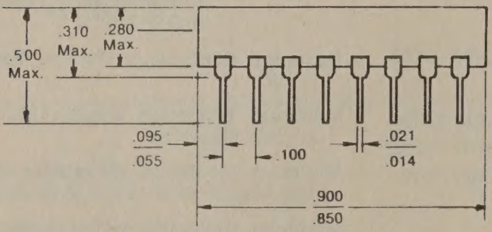


TYPE DPW 16

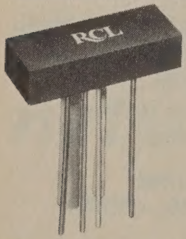
- Designed for automatic insertion
- Up to 8 resistors in a 16-pin package
- Optimum heat dissipation in small package
- High temperature stability
- Precision tolerance and T.C.

ELECTRICAL SPECIFICATIONS

Power Rating: 4 watts (up to .5 watts/resistor)
Resistance Range: .5Ω to 1.000Ω per resistor
Temperature Coefficient Match: 10 PPM/°C Standard Available to 2.5 PPM/°C
Tolerance: 1% Standard Available to .05%
Temperature Coefficient: 10Ω to 1000Ω ±20 PPM/°C
.5Ω to 9.9Ω ±50 PPM/°C
Tolerance Match: .05%
Dielectric Strength: 500 VAC
Insulation Resistance: 1000 Megohms minimum.
100 Megohms minimum after moisture test



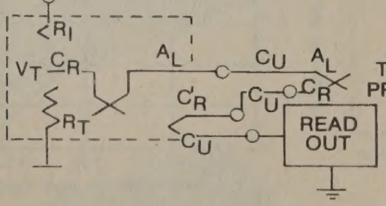
Also available in 14 pin standard DIP configuration (Up to 7 resistors). Specify DPW 14, DPW 14A, DPW 14B.



thermocouple reference junctions

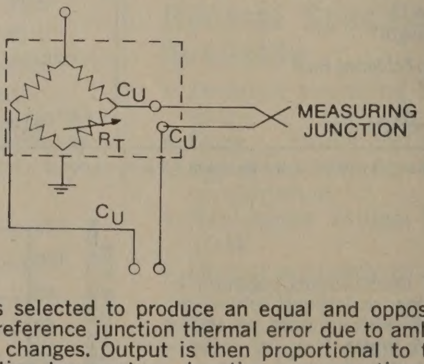
Reference junctions are necessary to make accurate temperature measurements with thermocouples. Ice baths or boiling water are most commonly used in laboratory tests. Since baths are inconvenient and impractical in equipment or field work, several alternate methods are used. RCL engineers and manufactures electronic reference junctions providing stable and accurate reference points for intricate temperature measuring systems.

A. CHROMEL ALUMEL REFERENCE NETWORK



Configuration A: Typical of a reference junction network for chromel alumel thermocouple. R_T is made with an alloy that varies the V_T exactly opposite to the CR-AL junction establishing a zero voltage effect due to ambient conditions, so that the measuring junction reference is always the initial desired temperature. The read out voltage is proportional to test probe temperature. This eliminates the need of the ice bath reference. Use of copper leads with the network eliminates secondary thermal errors.

B. BRIDGE REFERENCE JUNCTION



R_T is selected to produce an equal and opposite voltage to the reference junction thermal error due to ambient temperature changes. Output is then proportional to the measuring junction temperature. Junction compensations are practical to .5°C. These methods allow compensation of most common thermocouple junctions.

RCL *special series of "black jack" conformal vitreous*

- Extremely rugged vitreous construction for military and aerospace circuit applications.
- Special RCL rugged coating protects against extreme humidity and temperature cycling.
- All-welded construction.
- Ideal for machine insertion.

Standard tolerance ±5% in wattage ratings of 1, 2, 2.5, 3, 5, 6, 7, 9, 11 and 12 watts.

MECHANICAL

☐ **Terminal Strength:** Meets or exceeds MIL-R-26.

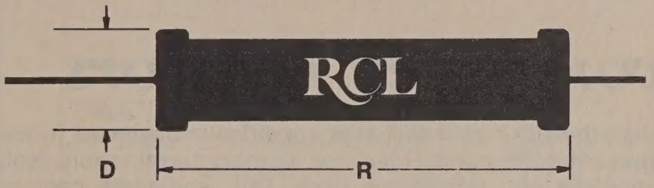
ELECTRICAL

☐ **Tolerance:** ±5% std.; ±1% to ±10% available.
☐ **Temperature Coefficient:** 0 ±30ppm/°C typical for 10Ω or greater.
☐ **Wattage:** See Table.
☐ **Inductance:** Varies with number of turns and wire size, Std. units have single layer winding. Non-inductive (Aryton-Perry) windings available.

MATERIALS

☐ **Core:** Ceramic, resistant to thermal shock and wide variations in temperature.
☐ **Resistance Element:** High grade resistance alloy wire, single layer winding. Leads and resistance element welded to metal end caps.
☐ **Coating:** Consistent, uniform, high performance black vitreous enamel.
☐ **Leads:** Solder coated.

ENAMEL AXIAL LEAD WIRE-WOUND RESISTORS



DERATING

Wattage ratings are based on 25°C Free Air Rating. For higher ambient temperatures, use derating chart.

RCL Electronics

special products

RCL engineers have designed and produced thousands of unique products to meet special customer applications. Shown are a few typical examples. RCL has an application engineering group directed toward solving and producing unusual products to fit custom requirements. Our capabilities include extended resistance ranges, extremely low reactance, low thermal EMF and special configuration.

computer resistors

High-density power resistors specifically designed to meet demanding space requirements. Ideal for memory termination. Isolates line drive impulses and terminates lines. RCL engineers can meet all design requirements by adapting nearly any type of configuration.
Particularly suited to very low resistance requirements for interface with integrated circuitry.

POWER RATING: 23 WATTS WHEN MOUNTED ON HEAT SINK MAINTAINED AT 75°C.

Resistance Range: From .01Ω to 100Ω.

Tolerances: 5% standard. Closer tolerances available. Consult factory.

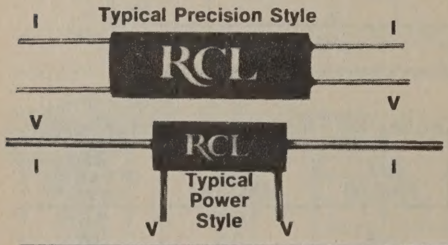
Dimensions: .5 x .5 x .062.
(Millimeters: 12.7 x 12.7 x 1.6)

T.C.: ±100 PPM/°C. Closer tolerances available on request.

Terminals: Wire leads.

Max. Temp.: (on open side) 125°C.

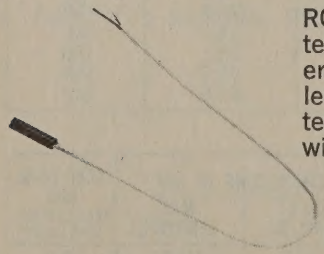
4-terminal resistors



RCL manufactures 4-Terminal Resistor assemblies in both precision and power styles. They are used in current sensing circuits primarily with low resistance values to minimize the effects of lead resistance and lead temperature coefficient. This unique construction is essential for tight tolerance low value resistors where lead material characteristics are critical.

To order, specify "4-Terminal Construction" with any RCL Resistor Series 7000 (Precision Styles) or Series "T" (Power Styles).
Consult factory for application details or special packaging configurations.

molded temperature compensators



RCL offers a standard line of epoxy encapsulated sensing resistors for temperature compensating applications. The standard resistance tolerance ±5% with tighter tolerances available on special order. Cable lengths from 2.0″ to 48.0″ are available with 6.0″ standard. Operating temperature range is −55°C to +125°C. Repeatability of tempco within a given lot is ±100 PPM.

RCL Style	Resistance Range	PPM/°C Average Tempco 0°C - 100°C
TC35	10Ω - 50KΩ	3500 ±350
TC45	10Ω - 10KΩ	4500 ±450

180	¾	6½	0.08	6.00	90	9/16	4	0.04	2.75

Available with adjustable tap bands or with tapped windings.

NON-INDUCTIVE RESISTORS: for high frequency power circuits. Available in all fixed-lug types, 10 watts and larger. Standard tolerances: ±10%.

RESISTANCE TOLERANCES: Standard: ±5%, 1.0 ohm and over. Special: down to ±1%.

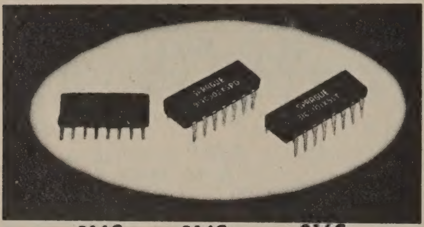
SPRAGUE RESISTORS

SIP and DIP METANET® PRECISION RESISTOR NETWORKS



- Designed for use in signal and data processing applications where repetitive resistance values and patterns are required.
- Cut package count, reduce equipment size, minimize costs.
- Up to 28 metal-film resistors on ceramic base.
- High packaging density – Fewer components to stock, handle, inspect, install.
- Standard resistance tolerance, ±2%.†
- Typical temp. coefficient, with 250 ppm/°C. Tracking between resistors, ±50 ppm/°C.
- Type 216C has single in-line configuration for vertical installation on high-density boards. Continuous total power dissipation is 1.5W at +25 C. Derating is linear to +150 C.
- Types 914C and 916C have dual in-line packages compatible with ICs. Continuous power dissipation at 25 C is 3W and 3.5W, respectively. Derating is linear to +150 C.
- Cat. No. Series ending in PE and SR available to 500KΩ on special order.
- For data on Type 216C, see Bulletin 7041. For data on 914C/916C, see Bulletin 7042.

TYPE 216C SINGLE IN-LINE PACKAGE (.125″ W. x .350″ H. x 1.000″ L.)

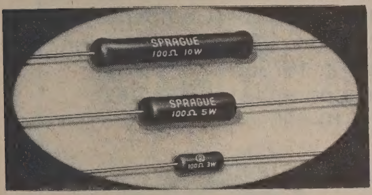
SPRAGUE RESISTORS

BLUE JACKET® VITREOUS-ENAMEL WIREWOUND RESISTORS



- Matched Coefficient of Expansion Allows Uniform Expansion of Vitreous Enamel Coating, Ceramic Base, and End Caps, Eliminating Crazing, Cracks, and Protects From Fumes and Humidity
- Standard Resistance Tolerance: ±5%
- Improved Minified Resistors Designed for Thorough Reliability and Stability Under Extreme Operating Conditions
- Windings and Leads Welded to End-Caps for Superior Mechanical Strength

Stackpole Fixed-Composition Resistors

Since the earliest days of radio, Stackpole fixed-compositon resistors have been continually updated and improved. They are among the most reliable and widely used components available for commercial, industrial, and military applications.

Stackpole's commercial-type resistors meet the requirements of MIL-STD-202, Method 208, and our military type far exceeds the stringent requirements of MIL-R-39008. We are qualified by the military to S level of established reliability, which specifies 0.001% failure rate per 1000 hours.

Stackpole resistors are 100% tested, which enables you to cut your inspection costs. Solderability, load life, and humidity-temperature characteristic checks insure constant control of quality. The result is uniformity, plus reliability.

To secure additional information, request Stackpole Bulletin 80-101.

Carbon-Film Resistors

Stackpole carbon-film resistors offer reliable performance in both commercial and industrial applications where high stability and uniformity of characteristics are required. Interchangeable in size with composition resistors, they are compatible with commercially available automatic sequencing and insertion equipment.

Stackpole carbon-film resistors are available in bulk package, strip package, cut and formed, and lead tape reel. See our Bulletin 86-100.

To obtain additional information, write Stackpole Carbon Company, Electronic Components Division, Kane, Pa. 16735 • Telephone: (814) 837-7000. TWX: 510-695-8404.

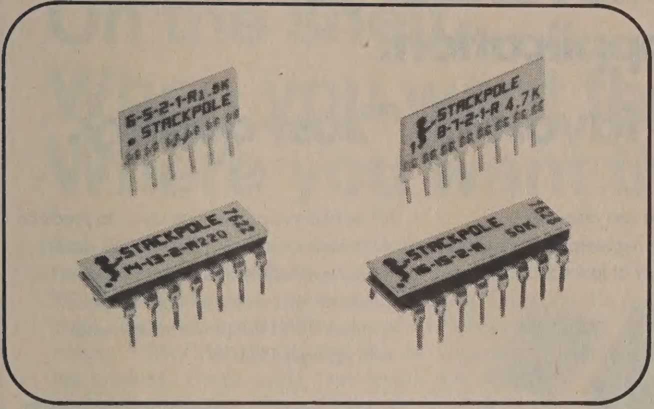
SIP & DIP Thick Film Resistor Networks



- High reliability thick film resistors
- Strong 96% alumina substrate
- .100″ (2.54mm) terminal spacing
- Wide selection of resistance values
- Fast delivery
- DIP packages interchangeable with TO-116 package
- DIP packages compatable with standard IC automatic insertion equipment
- Meets or exceeds physical outline requirements of MIL-STD. 202E for resistor networks

Performance Specifications

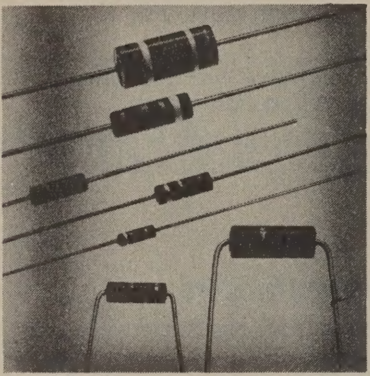
TRW IRC RESISTORS

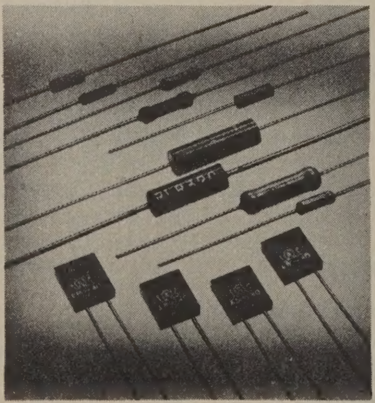
You get exactly the resistor you need for your application.

No compromises. No "favorites." Just quality.



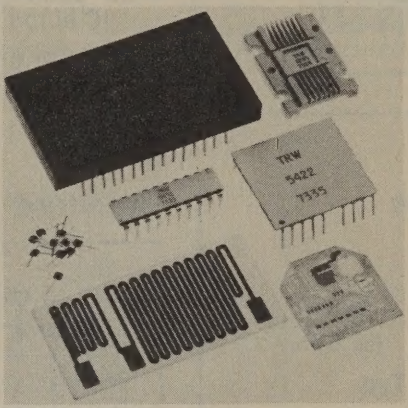
Carbon comp.

Billions used in consumer, industrial, military applications. TRW/IRC carbon comp. capability ranges from standard commercial types through established reliability RCR's, to ultra-high range (10^{11} ohms). Where you're using carbon comp.'s in automated assembly, TRW/IRC packaging options can help cut the cost of interfacing with your machines. Card packs, lead tape reels, cut and formed leads...we'll be glad to explore the potential economies with you.



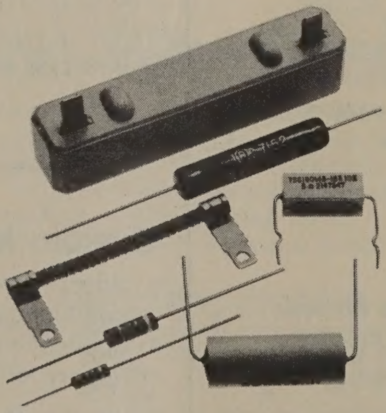
Metal Film

TRW/IRC has brought the state of the art in thin-film to a performance level equaling high-stability wirewounds. Capabilities include resistors with tolerances to ± 0.01% and ± 3 PPM T.C. ...high-rel units... precision subminiatures...and, of course the popular RN's. You can also look at alloy films offering high-temperature and high-voltage capability at low cost.



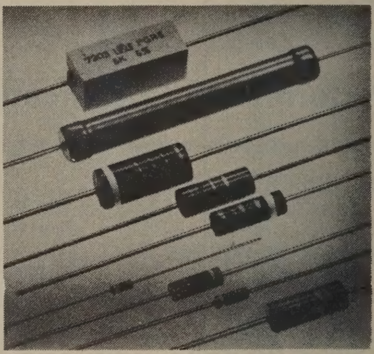
Resistive Networks

Advanced resistor technology here. These IC compatible, precision tantalum-film circuits provide inherent low noise, excellent stability, and hermetic performance without hermetic cost. Tolerances from 5% to 0.05% available in custom designs.
TRW/IRC also offers the industry's most complete line of discrete fixed resistors.



Wirewound

The line starts with molded wirewound resistors—"space-savers" that bridge the cost-performance gap between composition resistors and precision wirewounds.
It proceeds to standard, non-insulated types for appliance/automotive use...to precision subminiatures offering high power density... to low cost fusible, flameproof units for consumer and industrial applications... to tubular and flat power wirewounds with ratings to 250 W.



Metal Glaze™

This is TRW/IRC's thick-film technology—for all types of low power resistor applications. Metal Glaze is widely accepted for its built-in power handling reliability, resistance range, and cost effectiveness. Numerous standard and special designs—precision, semi-precision, flameproof, high-rel, high-voltage.

All types...all technologies... one source

To wrap it up, TRW/IRC offers you the most complete line of fixed resistors in the business, with many of the popular types available from one source— your local TRW/IRC distributor. Having a direct pipeline to each of our plants, he can give you fast delivery.

Contact your local TRW sales office for application assistance, custom designs, and special engineering help when you need it. TRW/IRC Resistors, an Electronic Components Division of TRW, Inc. Plants at Boone, N.C., Burlington, Iowa, Corpus Christi, Texas and Philadelphia, Pa. Write TRW/IRC Resistors, 401 N. Broad St., Philadelphia, Pa. 19108. Or call (215) 923-8230.

TRW IRC RESISTORS

TRW/IRC RESISTORS

On the shelf. . . When you want them. Where you want them.

The TRW/IRC resistors listed in the table below are those usually carried in stock by our distributors. They're the resistors you're most likely to need, or at least, need in a hurry. When you do, chances are your nearby TRW/IRC distributor can fill your order from his shelves. Other parts and styles are available as well, although not always from stock. Ask your distributor, he'll be happy to discuss your special local stock needs with you.

401 N. BROAD ST., PHILA., PA. 19108 (215) 923-8230

GENERAL PURPOSE MOLDED CARBON COMPOSITION RESISTORS (RC & RCR)

Performance advantages include **strong** lead assemblies. TRW's ribbed shoulder leads are **deeply** imbedded in the molding, defy twisting or pull-out.

TRW leads feature a uniform surface—thanks to an exclusive alloy electroplating process (no hot dipping). You'll find no lumps or voids to degrade solderability.

Moisture protection is another TRW feature. With the element thermally bonded to glass body and embedded in TRW's Selectrez™ mold jacket, you get a more than 50% boost in moisture protection.

TRW carbon comp.'s also offer outstanding high-temperature characteristics. This results from the resistance element's being bonded to the glass substrate at 500°C, plus the internal heat-sinking action of the talon lead construction.

Altogether, these features—plus superior high-frequency characteristics (see facing page)—mean a top quality resistor with outstanding reliability.

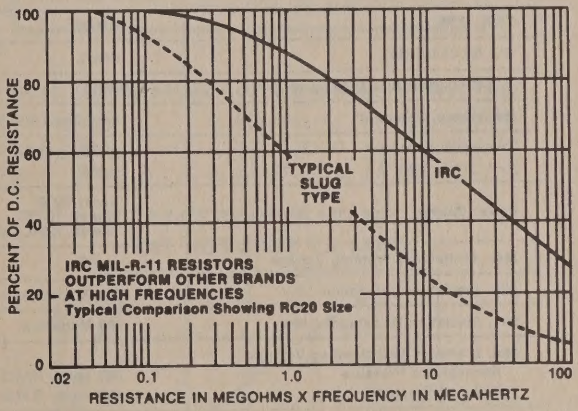
Superior high frequency characteristics

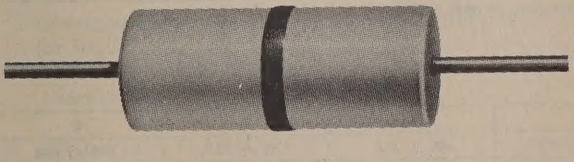
The best high frequency characteristics in a fixed composition resistor are achieved when the ratio of cross-sectional area to resistor length is minimized. TRW/IRC's element has the smallest cross section and fewest carbon binder contacts of any carbon composition resistors.

The low mass resistance element assures low shunt capacitance and superior performance at high frequencies. In high frequency equipment, this results in better pulse shaping with less broadening and truncation and faster response.

TRW/IRC resistors significantly outperform other brands, as shown on the chart.



ZEROHM Molded Jumper Wires



Molded jumper wires or crossovers, as they are sometimes called, are basically interconnection devices between points on a P.C. Board.

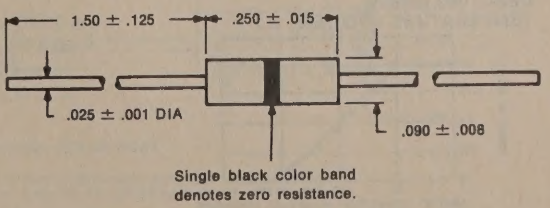
Generally they are used for the following reasons:

- —Inability to connect two points on a P.C. Board due to other circuit paths which must be crossed over.
- —An after-the-fact design change that requires new point connections.
- —Circuit tuning by changing point connections.

TRW's molded jumper wires offer a quick simple solution to these problems. They are especially suited for automatic machine insertion on lead tape or available in all packaging styles including pre-cut and formed for manual insertion.

SPECIFICATIONS

Maximum resistance	0.01 Ω
Lead material	30/70 tin/lead solder-coated copper wire.
Body material	Electrical grade, high performance, molding compound
Min. Insulation resistance—Dry	10,000 meg Ω
Wet	100 meg Ω
Min. Dielectric withstanding voltage	
Atmospheric	500V RMS
Reduced	325V RMS
Insulation flammability	Resistor insulation is self extinguishing within 10 seconds after externally applied flame is removed.



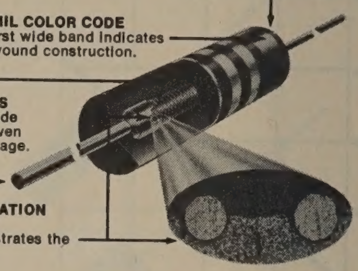
Single black color band denotes zero resistance.

TRW *IRC RESISTORS*

GENERAL PURPOSE WIREWOUND MOLDED RESISTORS

Type BW-20 (1 Watt) and BWH (2 Watt)

The TRW/IRC Type BWH bridges the cost-performance gap between composition resistors and premium wirewounds. Its 2 watt rating in 1-watt size lets you replace 2 watt units and save space, or use it in 1 watt space with the advantages of a two-times safety factor and wirewound stability. BW-20s come in six types of packaging to cut assembly costs. They fit ½ watt inserting machines, and can be ordered with a wide variety of cut-and-formed lead configurations.



ALLOY RESISTANCE WIRE
Continuously wound on a fiberglass core for greater uniformity and extremely low inductances.

HEAVY MOLD JACKET
Exclusive phenolic plastic jacket provides superior strength and moisture protection.

EIA/MIL COLOR CODE
The first wide band indicates wire-wound construction.

ELECTROPLATED LEADS
Tin/lead coated to provide excellent solderability even after extended shelf storage.

HOT CLAMP TERMINATION
Actual unretouched photomicrograph illustrates the positive termination, inherent stability.

BWF FLAMEPROOF FUSIBLE WIREWOUND RESISTOR

The BWF is an economical fusible/flameproof resistor designed to handle ½, 1 and 2 watt applications where dependable circuit and equipment protection is essential.

The BWF has predictable overload *Fusing* Characteristics and is *Flameproof* under fault conditions up to 1000X rated power. (1000V maximum).

Rated at 2 watts and physically a 1 watt size, the BWF provides space savings and is suited for lead forming or automatic insertion equipment on reels of 2000 units. Other packaging styles are available.

Note: BW-20F now available. Rated at 1 watt in ½ watt package for failsafe applications requiring a smaller size than the BWF.

TRW-BT348 FLAMEPROOF RESISTOR SPECIFICATION HIGHLIGHTS

1. INSTANTANEOUS OVERLOAD

   Overloads from 0 to 15 minutes duration. From 4X to 1000X rated power, (or 1000V, whichever is smaller)
   —No flaming of resistor
   —A paper tissue (Kimwipe #900-S) shall not ignite when resting across or beneath the unit.

2. DYNAMIC OVERLOAD

   Wattage increased at 100% increments of rated power every 2 seconds, (after a 1 minute warmup at rated power).
   —Same as 1 above.

3. CURRENT LIMITING

   Overload applied as in 1. Up to 1000X rated power (or 1000V).
   —Current shall limit to less than 1% of the ohms law value.

4. INSULATION FLAMMABILITY

   Resistor insulation is self extinguishing after externally applied flame is removed.
   —Extinguishes within 10 seconds.
   —Smoking is considered acceptable.

TRW IRC RESISTORS

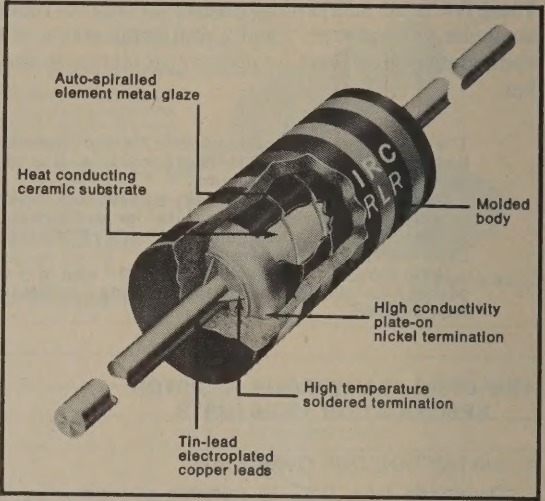
RG GENERAL PURPOSE SEMI PRECISION AND PRECISION METAL GLAZE™ RESISTORS

Cost effective IRC molded thick film Metal Glaze resistors are designed to provide a combination of ruggedness and performance unmatched anywhere for the price.

The secret is in the proprietary glaze systems, the unique design, and automated production techniques.

Metal Glaze resistors by the billions are in use worldwide, in all types of applications from missile guidance computers to truck anti skid systems, from telephone receivers to process control instrumentation.

Metal Glaze resistors meet or far exceed such MIL specifications as MIL-R-22684(RL), 10509(RN), 39017(RLR), 55182(RNR). Power Load ΔR's are often less than ±1%, even after 10,000 hours—equivalent to years of equipment life. And these units remain within tolerances even after extended periods of shelf or equipment storage.



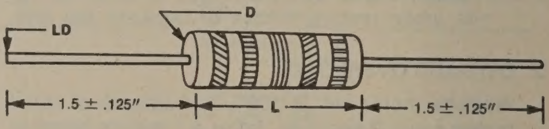
Auto-spiralled element metal glaze
Heat conducting ceramic substrate
IRC
RLR
Molded body
High conductivity plate-on nickel termination
High temperature soldered termination
Tin-lead electroplated copper leads

PRODUCT FEATURES

- **Metal Glaze™ Thick Film Element**—Fused to core at 2000°F—extremely rugged and reliable system—up to 100 times thickness of oxide or evaporated films.
- **Solid Ceramic Substrate**—Provides optimum thermal conductivity—permits maximum power density, lowest T.C. ΔR's, overload protection, and freedom from mechanical breakage.
- **End-Plated and Soldered Terminals**—Prevents movement, provides excellent electrical and thermal contact. Withstands 20 lb. pull for 5 seconds.
- **Uniform Molded Body**—Best mechanical strength for automated lead forming and insertion equipment.
- **Stability**—Above built-in features provide design tolerances of as low as ±1.5% (depending on purchase tolerance, style, and T.C. selection—see design tolerance discussion, page 6).

DIMENSIONS—See Table

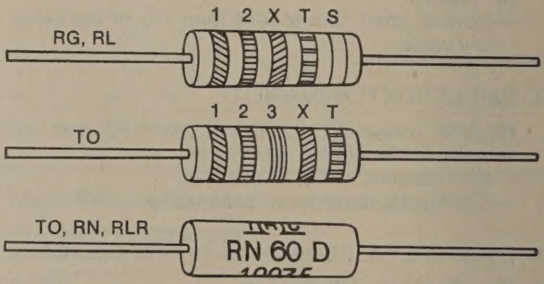
Body Configuration—Molded



IDENTIFICATION

Metal Glaze resistors can be provided with color bands or alpha-numeric printing.

See Table next page for marking by style.



1, 2, 3 = Significant Figures
X = Multiplier
T = Tolerance
S = White Solderable Band (RL)

New! 3W molded, axial lead GS-3 in a 1W package. Replaces wirewound power resistors and offers low temp. rise, excellent frequency response in reliable metal glaze construction.

MAR ULTRA PRECISION, NON-INDUCTIVE METAL FILM RESISTORS

"Where speed and precision count"
MAR ultra-precision resistors have all of the advantages of evaporated metal film resistors and in addition, precision tolerances to .01% and temperature coefficients to 5 PPM/°C are standard. The inherent low inductance and low capacitance of this design make it ideally suited to high-speed applications requiring a high degree of stability. The rugged epoxy encapsulation provides excellent environmental protection.

Tailored TCs from —100 PPM/°C to +150 PPM/°C are available with TC tolerances to ± 5 PPM/°C.

AR40 ULTRA-PRECISION METAL FILM RESISTORS

The AR40 ultra-precision metal film resistor is designed to satisfy those critical design requirements where virtually zero temperature coefficient, stability and absolute accuracy are needed. Temperature coefficients of ± 5 PPM/°C and ± 2 PPM/°C are standard. Standard tolerances are available to .01%. The radial lead design and small case size require a minimum of printed circuit board space. Proven end cap termination assures essentially no degradation during normal circuit board insertion practices.

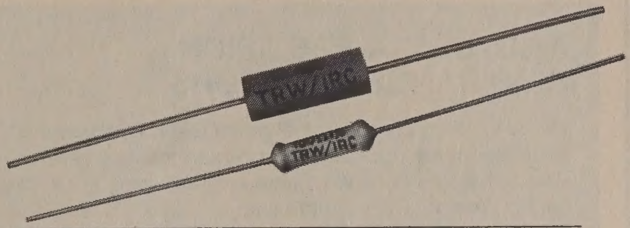
TRW IRC RESISTORS

M&C SERIES HIGH STABILITY METAL FILM RESISTORS

Evolved from the industry's original metal film process. These resistors are manufactured to the tightest controls for best performance with respect to low noise, high stability, and the ultimate in TCs and tolerances for precision applications. Standard tolerances and TCs are available to ± 0.1% and ±25 PPM°C respectively. Resistance values are to 100 megohms.

These evaporated metal film resistors will exceed all MIL-R-specification requirements, including the highest reliability level of MIL-R-55182. Voltage coefficient when measured between 1/10 and full rated voltage is typically less than 0.5 PPM/Volt for all values and essentially zero for low and medium values. Typical △ R for long term life is less than .04%.

The design concept of these resistors offer high strength characteristics for potting applications and automatic insertion.



MIL-R-55182 Char.	IRC T.C. Code	Temperature Coefficient	Temperature Span

TRW IRC RESISTORS

AR 90 ULTRA-PRECISION HIGH RANGE RESISTORS

The AR90 ultra precision metal film resistor is designed to satisfy those critical design requirements where resistance values between 1 meg Ω and 10 meg Ω are required. Temperature coefficients to 5 PPM/°C and tolerances to .05% are standard. Applications include ultra precision voltage dividers and input attenuators.

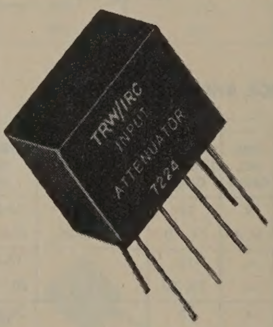
AR ULTRA-PRECISION RESISTOR NETWORKS

AR Resistor Networks provide the best performance and packaging density for a circuit requiring multiple, interdependent precision resistors. The rugged epoxy encapsulation provides maximum environmental protection. AR networks are designed to specific circuit requirements using one of the standard sizes available or special sizes where required.

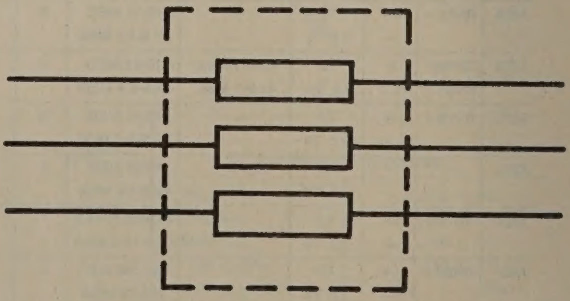


Features include:
- Lower Effective Cost
- High Density Packaging
- Ratio Matching to 0.005%
- Resistors thermally tied together
- Deliveries comparable to discretes
- All-welded construction
- TC Matching to ±1 PPM/°C

AR MATCHED RESISTOR SETS

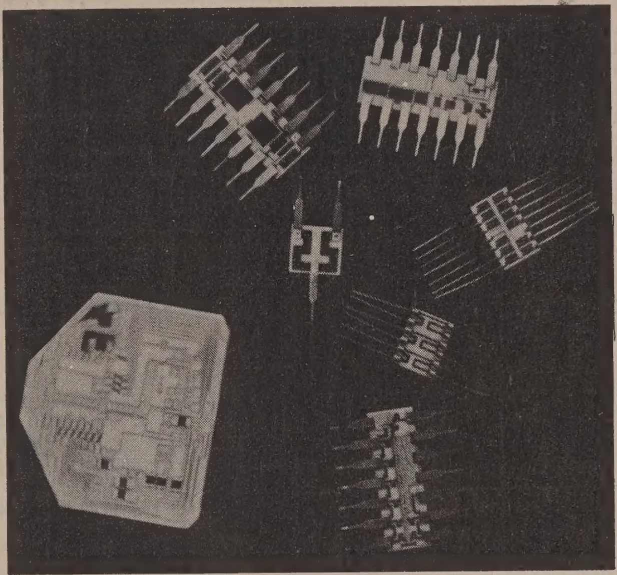
AR Matched Resistor Sets provide ultra-precision resistor performance at the lowest possible cost. Tolerance matching to 0.005% and TC matching to 1 PPM/°C can be specified.

Any TRW/IRC metal film resistors may be obtained as matched sets. The AR series, MAR and AR40 styles are recommended for the most precise tolerance and TC matching requirements.



TRW IRC RESISTORS

TaNFilm™ PRECISION FILM RESISTOR NETWORKS



TRW/IRC TaNFilm precision subminiature resistor networks are made of sputtered tantalum nitride, using proprietary equipment and processes.

TaNFilm is inherently resistant to electrolytic attack, since each resistor is passivated with an anodized surface layer. The processes used in manufacture allow routine tolerances of 0.1% and make tolerances of 0.05% economically feasible. The continuous sputtering process makes TaNFilm very uniform, so resistors track over the full temperature range to a few parts per million. Many hours of test data allow accurate performance prediction. A variety of networks are available, and others can be fabricated to your packaging requirements. Standard configurations are the DIP sandwich pack shown on page 16, and TO-88 type flat packs.

TYPICAL TaNFilm Design CRITERIA[1]

Resistance Value	50Ω to 100,000Ω	Drift	≤0.25% per year
Tolerance	±0.05% to ±1.0%	Noise	≤−25dB
TCR	−100±25 ppm/°C	Voltage Coefficient	≤5 ppm/V
TCR Tracking	to 5 ppm/°C	Series Inductance	≤5 nH
Settling Time	to 20nSec.	Shunt Capacitance	≤0.1 pF

[1] These are not absolute units. Contact factory for your specific requirements.

RESISTOR NETWORKS DUAL IN-LINE PACKAGE

TRW/IRC TaNFilm* resistor networks utilize a Tantalum Nitride resistor film deposited on a high alumina ceramic substrate. Units are molded in standard TO-116 DIP form-factor with 14 and 16 pin terminations.

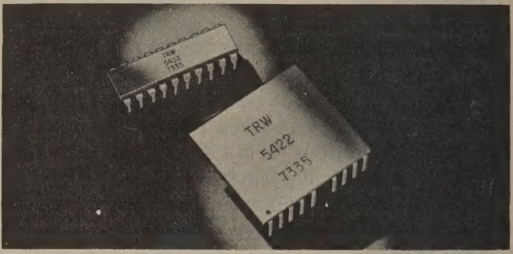
TRW IRC RESISTORS

TANFILM© R-2R LADDERS

- 12 BIT RESOLUTION
- FULL MIL PERFORMANCE
- TWO PACKAGE STYLES
- FOUR RESISTANCE VALUES
- 12 BIT OR 10 BIT ACCURACY



DESIGN

These 12 Bit R-2R Ladders feature the inherent passivation, low noise and premium performance of TaNFilm. They provide ±½ LSB accuracy over the full mil temperature range (−55 to +125°C) and retain this accuracy after long operating life in extreme environments. Unlike competitive devices this military grade performance demands no price premium. TaNFilm networks provide hermetic performance without the cost and disadvantages of hermetic sealing, because the tantalum nitride film is anodically passivated.

Resistors are sputtered tantalum nitride on 99.5% Alumina ceramic and are anodically passivated. Interconnections are 99.9% pure gold and the gold plated leads are welded to the interconnection film. Complete absence of silver and solder provides absolute insurance against silver and tin migration. The 5430 series features standard dual in-line packaging with rugged, gold plated, copper alloy, shouldered leads for ease of insertion. The 5420 series has two rows of leads .900" apart and is pin compatible with Beckman 811 series networks. The 5200 series are identical with the 5400 except for accuracy.

CIRCUIT AND APPLICATION

The circuit and pinout diagram is shown on the right. The characteristic "R" value may be 5K, 10K, 20K or 25K. Other values may be provided on special order. Standard switch compensation of 5 ohms is built into the four most significant bits. This also may be changed on special order. Three extra application resistors are provided for bipolar operation, Op Amp feedback or output attenuation. Switch or offset compensation may be provided in these resistors if required.

SPECIFICATIONS:

Ladder Resistance Values (R)	5K, 10K, 20K, 25K
Ladder Resistance Tolerance	±1%
Maximum Input Voltage	20V
Settling Time (to 0.1% of final value)	100n sec.
External Switch Compensation (Note 1)	5Ω
Temperature Range	−55° to 125°C
Ladder Voltage Accuracy	P/N 5200 is ±488 ppm; 5400 is ±122 ppm
Application Resistor Voltage Ratio	P/N 5200 is ±488 ppm; 5400 is ±122 ppm
Lead Material	Gold Plated Copper Alloy

STABILITY

TaNFilm 12 Bit Ladders Exhibit specified Maximum Voltage Ratio Error after the following tests:

Operating Life	1000 Hrs. Full Load 100°C
Short Time Overload	10 Seconds 2.5 x Rated Voltage
Thermal Shock	10 Cycles −65°C to +150°C
Temperature Cycling	10 Cycles −65°C to +150°C
Moisture Cycle - Load/Polar	10 Days 90/98% R.H. Full Load (202-106)
Soldering Heat	10 Seconds @ 260°C
Shock	3000 g's for 0.2 Milliseconds
Vibration	20 g's
Terminal Strength	Per Mil 202-211B

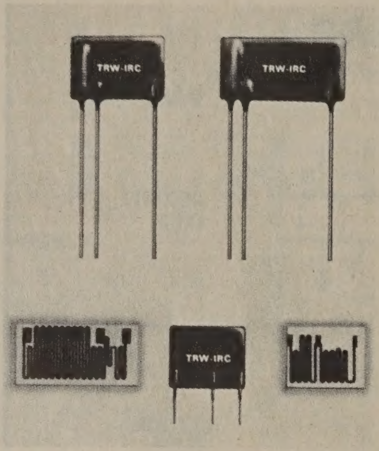
TRW *IRC RESISTORS*

THICK FILM-HIGH VOLTAGE DIVIDERS

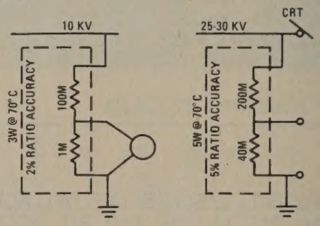


TRW-IRC "RD" series high voltage resistors feature voltage ratios, ratio tolerance and stability characteristics previously unavailable in high voltage resistors.

Resistance ratios to 10,000:1 and voltage ratings to 30 KV are now standard.

Typical Color tv application.

EXAMPLES:



For CRT, high voltage power supply, electrostatic copiers and other high voltage applications, type "RD" resistors are available in ceramic substrate and encapsulated versions; the latter is P.C. board compatible.

TRW IRC RESISTORS

MV GENERAL PURPOSE HIGH VOLTAGE RESISTORS

TRW/IRC
MVX-T172

MV resistors are designed for high voltage requirements where high resistance and power are needed. TRW/IRC's exclusive composition film type resistance coating is applied in helical form on a ceramic tube to provide a conducting tube of long effective length.

MV resistors are particularly suited for voltmeter multipliers, bleeders, electrostatic filters, X-ray equipment, probes, voltage dividers, TV high voltage circuits, and similar applications.

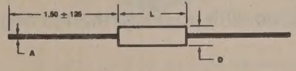
CR SEMI-PRECISION CARBON ALLOY RESISTORS HIGH TEMPERATURE/HIGH VOLTAGE



CR resistors are economically priced, high-voltage/high-temperature resistors developed for ballast and bleeder applications. This resistor series was originally designed to operate in inert, vacuum, or oil environments. Construction is completely inorganic with no outgassing, and these uncoated carbon alloy resistors will withstand an open flame of 1600°F.

CR resistors are currently being manufactured in three sizes. Other sizes and protective coatings are available upon request.

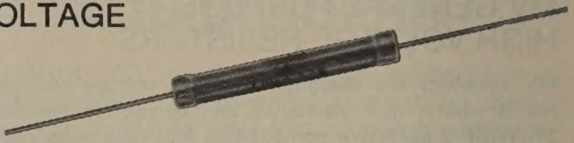
TRW IRC RESISTORS

CGH PRECISION HIGH RANGE, HIGH VOLTAGE METAL GLAZE RESISTORS



The CGH resistor uses the superior qualities of precision thick film, fired at high temperatures on an extremely stable ceramic substrate. This results in a resistor capable of operating in high ambient temperatures and with excellent high voltage load stability.

CGH resistors are particularly suited for precision high voltage and high impedance applications, such as voltage multipliers, X-ray equipment, and high voltage power supplies where precision tolerances and TCs are required.

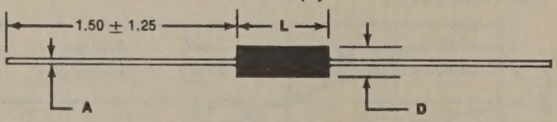
BR HIGH POWER DENSITY PRECISION THIN FILM RESISTORS

The BR series precision metal film power resistors offer an excellent power-to-size ratio, high frequency response, and exceptionally stable performance. They have power ratings 50% to 100% greater for a given size than formerly was available in metal films. This increased capability is obtained with no performance degradation.

Molded (M)



Conformally Coated (C)

AS MINIATURE PRECISION POWER WIREWOUND RESISTORS

Type AS resistors expand circuit design limits significantly by carrying full power even at 125°C ambient. These resistors meet MIL Characteristic V (MIL-R-26) with an allowable 350°C hot spot.

Available in standard and non-inductive windings. Additional options include special stabilization, matching, varnish top-coat, hot tinned leads. Special AS resistors furnished as Hi-Rel functional fuses.

30W

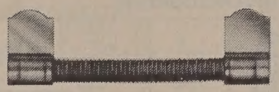
NOTE: Stack-mounted resistors must be derated to limit the hotspot cf the hottest unit to 350°C. For more efficient ventilation, resistors should be mounted with their flat sides (short axis) on a vertical axis.

TRW/IRC RESISTORS, AN ELECTRONIC COMPONENTS DIVISION OF TRW INC., P.O. BOX 393, BOONE, N.C. 28607 (704) 264-8861

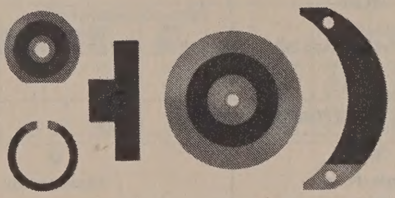
TRW IRC RESISTORS

AW COMMERCIAL WIREWOUND RESISTORS

Type AW resistors are available in a wide range of configurations to meet low-cost, high volume applications in the automotive and appliance fields. A range of terminal styles is available, and others can be made to user specifications at a nominal cost. Power ratings are 4.5 watts per inch between mounting centers on the standard AW, and 6 watts per inch between mounting centers on the Hi-Wattage AW resistor.



CONCENTRIC DISCS and STRIPS



Concentric discs and strips are available in power ratings of up to 1 watt per square inch. These resistors are carbon composition film screen on various flat substrates. Available 20Ω-100KΩ/sq. Standard tolerances are ± 20%.

Disc resistors are die stamped from resistance strips. Inner and outer rings of colloidal silver are applied to provide contact with coaxial line fixtures. Special configurations and tolerances to ± 10% are available. Applications are variable speed controls in automotive and appliance products, antenna rotor controls wherever a low cost special configuration pot element is required in quantity.

TRW/IRC RESISTORS, AN ELECTRONIC COMPONENTS DIVISION OF TRW INC., P.O. BOX 393, BOONE, N.C. 28607 (704) 264-8861

TRW/IRC APPLICATION/DESIGN CAPABILITY

It is impossible to describe in this catalog all the product variations available from TRW/IRC Resistors. Selected TC's, special tolerances, fixed rise times . . . the unique configurations variations are limited only by our mutual ability to work together.

Beyond this, TRW also offers an application/design capability second to none in the industry—and ready to meet virtually any resistive need you might have.

This technology embraces both thin and thick metal film, networks, wirewounds, high-voltage and ultra-precision resistors. In thin-film, for example, it includes tolerance and TC matching down to .01% and 5 PPM/°C respectively. In thick-film, it includes design capabilities in subminiature, tubular substrates — for relays, LED's, and connector applications. In wirewound resistors and assemblies, it includes specialized TC's, fusible units, and custom configurations.

Too, TRW technology also takes in high-precision tantalum-nitride networks. Because of the high circuit density possible with tantalum units, this technology offers opportunities for extreme miniaturization.

* * *

The foregoing scarcely touches the highlights of TRW/IRC's application/design capability. But most important, whatever your performance, configuration or environmental problem, we urge that you let us work with you at the **design** stage. It's at this point, we believe, that we can offer the greatest help in application and cost effectiveness.

TRW IRC RESISTORS

MIL SPEC DEFINITIONS, TERMINOLOGY

MIL—R—11 (RC) RC07GF153K

RC07	GF	153	K
Style/Power (See Tables 1 and 2)	"G" = 70°C Max. ambient temperature for full load operation. "F" = Temperature Coefficient which varies (with resistance) from ±625 ppm/°C to ±3100 ppm/°C.	Resistance First 2 digits significant, 3rd digit "number of zeros." 153 = 15,000Ω	Tolerance (See Table 4) K = ± 10%

MIL—R—22684 (RL) RL07SI53J

RL07	S	153	J
Style/Power (See Tables 1 and 2)	Terminal (Lead) "S" = Solderable	Resistance First 2 digits significant, 3rd digit, "number of zeros." 153 = 15,000Ω	Tolerance (See Table 4) J = ±5%

MIL—R—10509 (RN) RN60D1003F

RN60	D	1003	F
Style/Power (See Tables 1 and 2)	Characteristic (See Table 3) D = ±100 ppm/°C	Resistance First 3 digits significant, 4th digit "number of zeros." 1003 = 100,000Ω	Tolerance (See Table 4) F = ±1%

MIL—R—26 (RW)—Numbering System Complex (See MIL spec) RW55U49R9F

RW55	U	49R9	F
Style/Power Size/ Construction	Max. "Hot Spot," derating temperature, insulation resistance and moisture resistance. "U" or "V" characteristic.	Resistance 3 or 4 digits depending on the TC, tolerance, etc. "U" char. has 4 "V" char. has 3	Tolerance (See Table 4) Only applicable to "U" char.

MIL—R—39008 (RCR) RCR07G153JS

RCR07	G	153	J	S
Style/Power (See Tables 1 and 2)	Characteristic "G" indicates a max. ambient temperature of 70°C for full load operation, and a TC which varies (with resistance) from ±625 ppm/°C to ±1900 ppm/°C.	Resistance First 2 digits significant, 3rd digit, "number of zeros." 153 = 15,000Ω	Tolerance (See Table 4) J = ±5%	Failure Rate (See Table 5) S = .001%/ 1000 hours

MIL—R—39017 (RLR) RLR07C153GR

RLR07	C	153	G	R
Style/Power (See Tables 1 and 2)	Terminal (Lead) "C" = Solderable/Weldable	Resistance First 2 digits significant, 3rd digit, "number of zeros." 153 = 15,000Ω	Tolerance (See Table 4) G = ±2%	Failure Rate (See Table 5) R = ±0.1%/ 1000 hours

MIL—R—55182 (RNR) RNR60H1003FS

RNR60	H	1003	F	S
Style, Terminal and Power (See Tables 1 and 2) RNR = Solderable Leads RNC = Solderable/Weldable Leads RNN = Nickel Leads	Characteristic (See Table 3) H = ±50 ppm/°C	Resistance First 3 digits significant, 4th digit "no. of zeros." 1003 = 100,000Ω	Tolerance (See Table 4) F = ±1%	Failure Rate (See Table 5) S = .001%/ 1000 hours

NOTE: The Established Reliability specifications (i.e., MIL-R-39008, MIL-R-39017, and MIL-R-55182) supersede MIL-R-11, MIL-R-22684, and MIL-R-10509 respectively, for all *new* design. Resistors qualified to the three Established Reliability specifications may be substituted, without limitation, wherever the older MIL devices are specified.

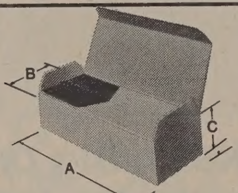
TRW IRC RESISTORS

PACKAGING STYLES

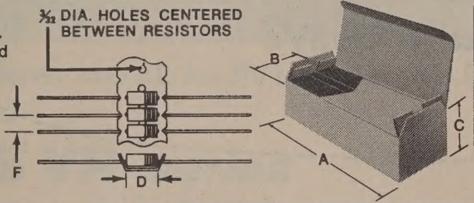
Consult factory for standard package available for the resistor of your choice.

Oriented Bulk: Preferred by manufacturers with their own feeding or taping arrangements. Resistors are axially oriented.



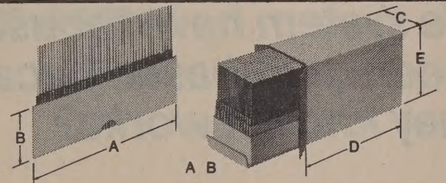
Type	Wattage	Standard Quantity Per Box	A	B	C
GBT-¼	¼	2500	10 7/16″	3 11/16″	1 5/16″
GBT-½	½	2000	10 7/16″	4 1/8″	2 5/16″
GBT-½V	½	2000	10 7/16″	4 1/8″	2 5/16″
GBT-1	1	1000	10 9/16″	4 ¼″	2 11/16″
BW-20	1	2000	10 7/16″	4 1/8″	2 5/16″
BWH	2	1000	10 9/16″	4 ¼″	2 11/16″

Grip Strip® A TRW exclusive. Resistors are held without adhesive in strips for ease of handling and counting.



Type	Wattage	Standard Per Box	Quantity Per Strip	A	B		D	F
GBT-½	½	1000	50	10 7/16″	4 1/8″	2 5/16″	.182″	7/16″
GBT-½V	½	1000	50	10 7/16″	4 1/8″	2 5/16″	.182″	7/16″
GBT-1	1	1000	40	12″	4 5/16″	4″	.260″	9/16″
BW-20	1	1000	50	10 7/16″	4 1/8″	2 5/16″	.182″	7/16″
BWH	2	1000	40	12″	4 5/16″	4″	.260″	9/16″

Corrugated Card Pack: Resistors are inserted into the flutes of corrugated cards.



Type	Wattage	Standard Quantity Per Box	Quantity Per Strip	A	B	C	D	E
GBT-¼	¼	1000	50	6 3/8″	1½″	2 13/16″	6 7/8″	3½″

*Other spacing available.

Cut and formed leads

TRW/IRC offers the widest selection of pre-cut and formed units in the industry.

Purchasing of pre-cut units offers the user very significant savings in labor and assembly, as well as savings in valuable plant space, since units take only half the space of other packaging styles.

Drawings shown are for carbon composition types. These packaging styles are available for many wirewound and film resistors with some dimensional variations. Consult your sales representative or the factory for specifications, availability and costs.

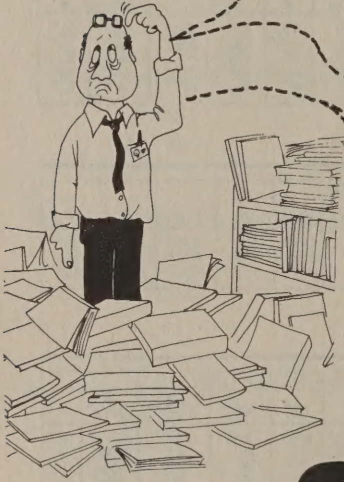
What can I use to keep all the manufacturers' product data I receive in order?

What system makes filing or retrieving manufacturers' catalogs fast and easy?



Which file system have thousands of engineers purchased because they know it works?

eem FILE SYSTEM

THE ONLY FILE SYSTEM DESIGNED SPECIALLY FOR THE ELECTRONIC ENGINEER!

The publishers of **eem** have put together a unique filing system for electronic product information. The complete system includes: a product index booklet which classifies electronic products into 3,000 listings both alphabetically and by product group, and 45 file folders imprinted with the **eem** product sections (extra gummed labels included for expanding the system.)

As you receive manufacturers' catalog data sheets, technical bulletins, or clip magazine articles, jot down the proper Product Section Numbers from the **eem** PRODUCT-TO-SECTION INDEX. Then simply file in order. When you require information on a specific product, refer to PRODUCT-TO-SECTION INDEX again to locate the correct file folder. It's simple, and you'll always have the necessary data to compare, specify and buy, right at your fingertips.

Here's how to order your eem FILE SYSTEM:

For the complete system send $10 (plus tax; N.Y., 8%, CA, 6½%) in check or money order to:

United Technical Publications, Inc.,
645 Stewart Avenue, Garden City, N.Y. 11530
Att: Circulation dept.

For an **eem FILE SYSTEM** without file folders send $7.50 (plus tax; N.Y. 8%; CA, 6½%).

United Technical Publications, Inc., Div. of Cox Broadcasting Corp. • 645 Stewart Ave., Garden City, N.Y. 11530

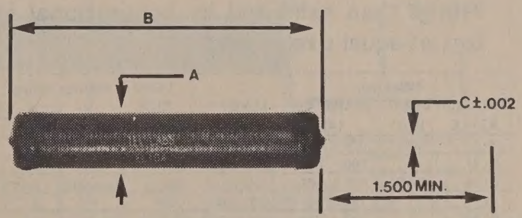
TYPE VR series vitreous power



An essential factor for reliable resistor performance is in the protection that the resistor's enclosure provides to its relatively fragile resistance element.

This protection must withstand the mechanical conditions of handling in use, the thermal effects of the resistor operation under adverse situations and the chemical environments imposed during assembly or life. Additionally, it functions as the medium through which the heat is extracted from the element and dissipated.

A ceramic enclosure affords the ultimate in this type of protection for a wirewound power resistor.

The hard, smooth vitreous surface resists the effects of severe abrasion and rough handling during circuit assembly and through-out life.

Overloads can be sustained without damage to the enclosure because the assembly has already been subjected to red-heat when this coating was applied. There is no attendant flame or burning on severe overload, since there is no organic material to burn.

Both this high temperature capability and the good thermal conductivity of the ceramic material combine to allow higher temperature operation and higher wattage ratings for resistors with this coating as an enclosure. The high heat conductivity of this ceramic in direct contact with the individual turns of the resistance wire provides an excellent transfer of the heat generated in the wire. There is no thermal insulation to cause hot spots.

The inert character of the ceramic coating provides the resistor with a resistance to chemical conditions, which avoids environmental corrosion, and affords solvent resistance during cleaning operations after circuit assembly. The resistor's marking is also an inert ceramic material so that identification is permanent under all conditions.

Tolerances: 5% for 1Ω and higher. 1% available on special request in most cases. 10% for values below 1Ω.

Temperature coefficient: 30PPM for 10Ω and higher. Below 10Ω, 90PPM. Special T.C.'s are available.

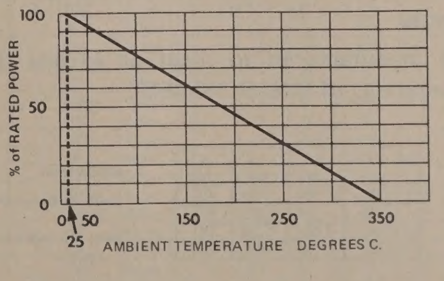
Dielectric strength: 1000 volts AC on 2 watt and higher. 500 volts AC on 1 watt.

Wattages: 1 watt to 12.5 watts @ 25°C ambient. Derated to 0 @ 375°C.

Inductance: Varies with each resistance value and size. Contact factory for information. Non-inductive resistors available.

Welded construction.

Meets or exceeds MIL-R-26



We do just one thing, and one thing well!

Same derating as shown on opposite page.

Units are manufactured using stainless steel end caps, all welded construction and high quality resistance wire.

Coating is of high quality silicone to withstand high temperature operation.

Standard tolerances and temperature coefficient as well as specials are available.

Units are supplied with axial leads.

Non-Inductive (Aryton-Perry) specify as "BLN". Maximum resistance (per chart below) would have to be divided by two.

TYPE EH chassis mount aluminum housed

All welded construction

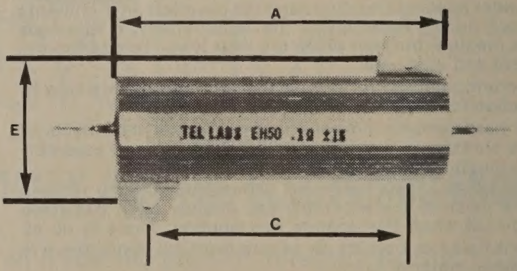
Special molding compound and process assures positive transfer of heat to the case and mounting chassis.

Resistance ranges — per chart below and lower values upon investigation.

Tolerances — .01% thru 5% — close tolerances on low ohms per application only.

For Non-Inductive, add "N" to style number. Maximum resistance value must be decreased by at least one half of maximum value listed in chart.

Units manufactured to meet or exceed the requirements of MIL-R-18546D.



Also available Non-Inductively Wound

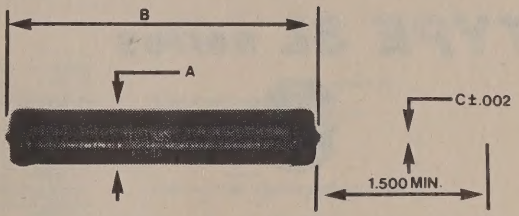
TYPE EL silicone power

MEET OR EXCEEDS MIL-R-26



Silicone coated units with axial leads provide maximum power dissipation using the smallest package.

These may be made using standard inductive winding or non-inductive winding. Care must be taken when specifying non-inductive winding as it is possible to achieve only one half the resistance value specified for inductive winding.

A cost savings may be realized as compared to many other precision type units.

Resistance tolerances to 0.05% are available in this series.

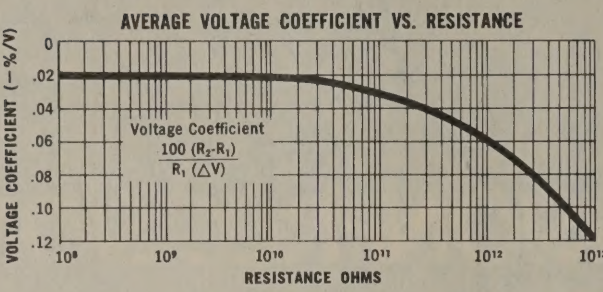
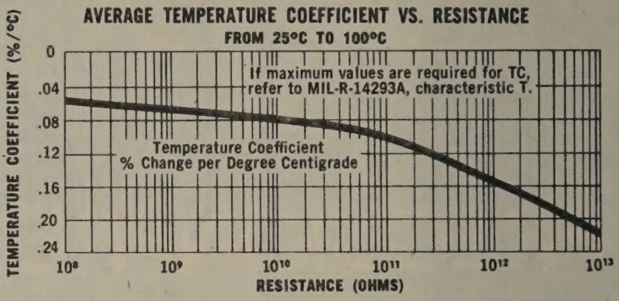
VICTOREEN PRECISION GLASS-ENCAPSULATED RESISTORS
HIGH RESISTANCE

AVERAGE VOLTAGE COEFFICIENT VS. RESISTANCE



AVERAGE TEMPERATURE COEFFICIENT VS. RESISTANCE
FROM 25°C TO 100°C

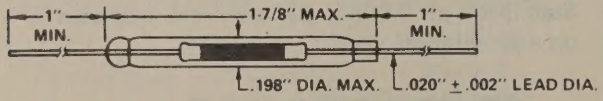


TYPE RX-1 HI-MEG RESISTORS

Victoreen HI-MEG resistors were originally designed for use in electrometer circuits where a high order of performance is required. HI-MEG resistors achieve a high degree of accuracy and stability, and operate at this high level for a long period of time. The HI-MEGs are manufactured in accordance with MIL-R-14293A, characteristic T, and therefore are measured at 20 volts ±1 volt. Reference to the average voltage coefficient curve will indicate that deviations from the marked resistance value may be encountered when used at higher voltages. By special order, Victoreen can supply resistors with resistance measurements at specified voltages.

GLASS SEAL

HI-MEGS are vacuum sealed in a glass envelope which is treated with a special silicone varnish which keeps the resistor relatively free from the effects of moisture. Care should be exercised however, to avoid contamination in handling, such as fingerprints, which might result in reduced effective resistance.



POWER RATING

The power rating for any HI-MEG resistor is equal to one divided by the resistance in megohms.

ELEMENT

The resistor element is a carbon coated glass rod, the ends of which are banded with silver to obtain the best electrical contact. Wire leads extend from the ends of the element.

NOISE

The noise level is negligible for most uses.

RESISTANCE

HI-MEG resistors are available in values from 10^7 to 10^{14} ohms.

TOLERANCE

HI-MEG resistors can be supplied in the following tolerances: 1% below 10^{12} ohms, 2% and 5% below 10^{13} ohms, and 10% over the entire range. Refer to the price list for standard tolerance availability.

MAXIMUM WORKING VOLTAGE

1000 volts.

MAXIMUM OPERATING AMBIENT TEMPERATURE

100°C.

TYPES RX-2, RX-3, RX-3HV, RX-4, RX-5

RESISTANCE ELEMENT

Ceramic rod, selected for high quality of composition and surface texture, has pure crystaline carbon deposited on its surface through pyrolysis of hydrocarbon vapor. No filler or binder is used with the carbon.

TERMINALS

Contact terminals are silver plated brass caps securely gripping the ends of the element which are also silvered to obtain the best electrical conductivity.

GLASS SEALS

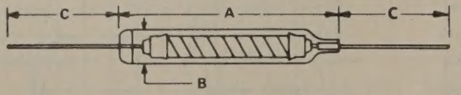
All resistors are glass-sealed. The deposited carbon resistors are encased in glass envelopes from which the air has been exhausted and a dry, inert gas substituted.

MARKING

All resistors are plainly marked with the type designation, the resistance value and the tolerance.

TOLERANCE

Resistors are made to specified values within the limits shown in the data table. Limited quantities of resistors of any value can be furnished from stock for immediate delivery.



HIGH VOLTAGE • HIGH WATTAGE

TEMPERATURE COEFFICIENT

±500 ppm maximum over temperature range −55°C to +125°C. TCR is effected by resistance value and resistor type.

VOLTAGE COEFFICIENT

The coefficient is −.0002 for all types and values of resistors listed in the table below.

POWER RATING

The power rating of these resistors should be determined from the "TEMPERATURE DERATING CURVES" and/or the "POWER VS. RESISTANCE VALUE" curves for the particular application.

CRITICAL RESISTANCE

Resistor performance may be adversely affected by (1) overheating due to overwattage or (2) the application of excessive voltage. Since $W = E^2/R$, the term "critical resistance" applies to that value of resistance at which both maximum voltage and maximum wattage may be applied. Below this value, the voltage must be limited to that voltage which will produce the maximum rated wattage; above this value, the wattage must be restricted to that wattage which will be produced by the application of maximum rated voltage.

HIGH VOLTAGE SHIELDING

The RX-3HV is designed to meet the difficult requirements encountered when the resistor operates at more than 10 kv above ground. Examples of this would be a resistor used as a series filter in a high voltage power supply or as bleeder strings across such supplies.

Type	Watts Max.	Resistance			Max. Working Voltage	Tolerance %	Max. Temp. °C	Dimensions (Inches)			
		Min.	Critical	Max.				A Max.	B Max.	C Min.	Lead Diam.

VICTOREEN HIGH VOLTAGE METAL OXIDE RESISTORS (MOX SERIES)

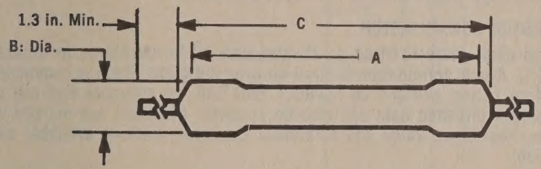
- **WIDE RESISTANCE RANGE—10 K OHMS TO 5000 MEGOHMS**
- **TOLERANCE TO 1%**
- **POWER RATINGS TO 12.5 WATTS**
- **FULL LOAD STABILITY BETTER THAN ±1% FOR 2000 HOURS AT 70°C**
- **FULL PROTECTION AGAINST ROUGH HANDLING AND ENVIRONMENTAL EXTREMES**
- **EXCELLENT HIGH VOLTAGE, HIGH TEMPERATURE AND HIGH FREQUENCY OPERATION**

SPECIFICATIONS:

The following test specifications of Mil Std. 202 are applicable to these resistors.

(1) **MOISTURE RESISTANCE:** Method 103B, △R .25% max. Test condition B.
(2) **TEMPERATURE CYCLING:** Method 102A test condition C, △R .2%.
(3) **DIELECTRIC WITHSTANDING:** Method 301, 750 volts, △R .25%.
(4) **INSULATION RESISTANCE:** Method 302 test conditions A or B. 10,000 megs dry.
(5) **SHOCK:** Method 205D test condition C, △R .25%.
(6) **VIBRATION:** Method 204B test condition D, △R .2%.
(7) **RESISTANCE TO SOLVENTS:** Method 215.
(8) **TERMINAL STRENGTH:** Method 211A test conditions A and D, △R .25%.

There are no Mil specs specifically written to cover Mox type film resistors. However, the following are useful as reference documents.
Mil-R-10509F Mil-R-22684B Mil-R-39017A Mil-R-55182D



These resistors are capable of dissipating higher wattages than rated if ambient temperatures are lower than 70°C or if forced air or oil cooling is employed. This additional capability can be determined in accordance with the temperature rise and the derating curves.

For design of high-voltage, highly-stable miniaturized electronic networks and equipment, the new MOX resistors have all the ingredients you need for ultra-critical applications. For instance, MOX resistors are a fraction the size of conventional types . . . 100 ppm TCR or less to 2500 megohm; stability better than ±2% for 1,000 hours at full load. In addition, typical quantech noise at 20 megohms is less than 1.5 microvolt/volt. All these characteristics combine to provide extremely-rugged and highly-stable resistor configurations that are virtually immune to environmental extremes. MOX resistors where power and voltage to size ratios are critical.

VOLTAGE RANGE

Below critical resistance values, the voltage is limited by the wattage rating of the resistor. Application of the power formula $E^2=WR$ will indicate the permissible maximum voltage. (Refer to Table I for additional data.)

TEMPERATURE COEFFICIENT

In accordance with Table II, the temperature range for calculating temperature coefficients is —55°C to 125°C.

WATTAGE RATING

Wattage ratings calculated on the basis of 70°C ambient temperature. MOX Series A resistors are derated to zero watts at 220°C.

VOLTAGE COEFFICIENT

Voltage coefficient depends on a number of resistor parameters, the most influential of which is resistor value. In general, the higher the resistance value, the higher the voltage coefficient. Victoreen tries to maintain a maximum voltage coefficient of 5 ppm/volt over the complete voltage range of the resistor.

STABILITY

Full load drift (rated wattage at 70°C) is less than 1% in 2000 hours. Shelf or dry circuit drift is less than .1% per year.

RESISTOR CONSTRUCTION

Metal oxide glaze fired on an alumina core at temperature in excess of 800°C. A gold termination is fired on over the glaze which accommodates a close fitting, pressed on welded cap and lead assembly. Standard lead materials are as specified in the data section. Alternate end caps containing a 6-32 threaded hole can be provided for the MOX-1A through the MOX-5A series. Resistors are marked with Type, Resistance Value and Tolerance. Customer marking available as an option.

COATING—Epoxy Resin

- Resists most industrial solvents.
- Excellent moisture resistance.
- High dielectric and low outgassing.
- Maximum hot spot temperature of 220°C.

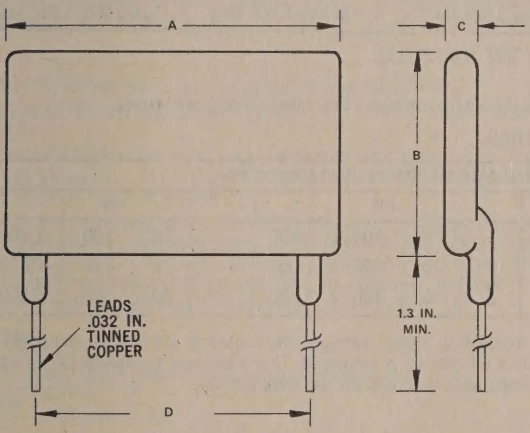
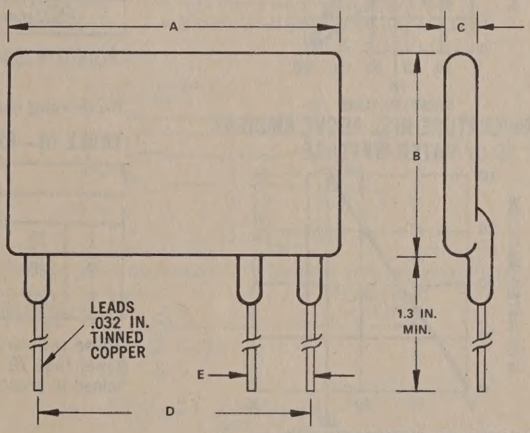
SLIM-MOX PROFILE*



DIVIDER-MOX PROFILE*



*REFERENCE TABLES I AND IV FOR DIMENSIONS

Victoreen Metal Oxide Glaze Resistors are the culmination of years of experience in the manufacture of resistors for many special applications requiring precision and reliability. The MOX resistive element is composed of highly stable metal oxides in a special glass matrix fired on high alumina substrates at temperatures in excess of 800°C. The end product is a highly stable resistor that gives improved parameters in all important areas including stability, temperature coefficients, voltage coefficients and power handling capability.

For design of high voltage, highly stable miniturized electronic networks and equipment, the new SLIM-MOX resistors have all the ingredients you need for ultra-critical applications. For instance, SLIM-MOX resistors are a fraction the size of conventional types; 100 ppm TCR or less to 300 megohms, stability better than ±1% for 1000 hours at full load, low voltage coefficient less than 5 ppm/volt. All these characteristics combine to provide extremely rugged and highly stable resistor configurations that are virtually immune to environmental extremes.

RESISTANCE RANGE
See Table I.

VOLTAGE COEFFICIENT
Voltage coefficient depends on a number of resistor parameters, the most influential of which is resistor value. In general, the higher the resistance value the higher the voltage coefficient. Victoreen tries to maintain a maximum voltage coefficient of 5 ppm/volt over the complete voltage range of the resistor.

COATING
Excellent environmental protection is afforded SLIM-MOX resistors, through the use of a conformal epoxy coating, that is moisture resistant and resists most industrial solvents. This coating has excellent high temperature properties allowing a maximum hot spot temperature of 150°C. It is compatible with most commonly used potting compounds, offers high dielectric and low outgassing properties.

STABILITY
Full load drift (rated wattage at 70°C) is typically ±1% in 1000 hours. Shelf life or dry circuit drift is less than 0.1% per year.

VOLTAGE RANGE
In accordance with Table I, except below critical resistance values, the voltage is limited by the wattage rating of the resistor. Application of the power formula $E^2=WR$, will indicate the permissible maximum voltage.

TEMPERATURE COEFFICIENT
In accordance with Table II. The temperature range for calculating temperature coefficients is —55°C to +125°C.

WATTAGE RATING
Wattage ratings are calculated on the basis of 70° ambient temperature and derated to zero watts at 150°C. See temperature rise and derating curves. See Table I for ratings.

RESISTOR CONSTRUCTION
Metal oxide glaze on a solid alumina substrate. Leads are tinned copper.

SG SHELLER-GLOBE CORPORATION

VICTOREEN DIVIDER-MOX RESISTORS

Victoreen DIVIDER-MOX represents an advanced concept in the area of high voltage resistive divider networks. Through the use of an unique manufacturing process, Victoreen is able to produce a divider network utilizing the basic information available to the design engineer. The effects of T-C matching, V-C, self generated heat and other hard to define and control variables are minimized. The following basic information will enable us to supply a divider tailored to your application.

A) Total resistance value of the divider.
B) Input Voltage
C) Output voltage and tolerance
D) Output voltage stability over operating temperature extremes (expressed in percent allowable change)

The limits of each of the above parameters are listed below.

RESISTANCE RANGE

See Table I. In order to enhance output voltage stability the total resistance to the divider should be as high as possible in order to minimize self-heating.

VOLTAGE RANGE

Below critical resistance values, the voltage is limited by the wattage rating of the resistor. Application of the power formula $E^2 = WR$ will indicate the permissible maximum voltage. (Refer to Table I for additional data.)

WATTAGE RATING

Wattage ratings are calculated on the basis of 70°C ambient temperature. DIVIDER-MOX resistors are derated to zero watts at 180°C.

INPUT/OUTPUT VOLTAGE RATIOS

As indicated in Table I, any ratio between the maximum and minimum specified is available, except for those maximum ratios that exceed our manufacturing limitations.

INPUT VOLTAGE

Maximum in accordance with Table I. Minimum consistent with Input/output voltage ratios.

OUTPUT VOLTAGE

Determined only by input voltage limitations and Input/Output voltage ratios. The best available tolerance is 1%.

OUTPUT VOLTAGE STABILITY

This is the parameter which really defines the precision of a divider and is expressed in terms of percent allowable change over the operating temperature range. Stability is dependent on a number of factors including power dissipation and operating temperature range. While Victoreen DIVIDER-MOX resistors are capable of operating over the full range of characteristics indicated, if power dissipation is limited to 10% of the maximum values indicated, (not an unreasonable figure since most dividers are high resistance devices) stabilities of .1% are obtainable. Operation at higher wattage levels will effect initial (turn-on) stability and additional time must be allowed for the divider to reach temperature equilibrium.

OPERATING TEMPERATURE RANGE

The normal maximum operating temperature extremes used to calculate output voltage stability are −55°C to +125°C. Generally speaking, narrower extremes means better stability, wider extremes, of course, sacrifice stability.

DIVIDER CONSTRUCTION

A single high alumina core is utilized with a metal oxide resistive element. The end terminations are gold and accommodate close fitting, pressed on welded cap and lead assemblies. The third terminal is mechanically fastened to a gold termination and the whole assembly is epoxy coated with the same high quality material used on other MOX resistors. Threaded end caps available on MAXI-MOX are available on DIVIDER-MOX as well. Resistors are marked with Type, Resistance Value and Tolerance. Customer marking available as an option.

COATING Epoxy Resin

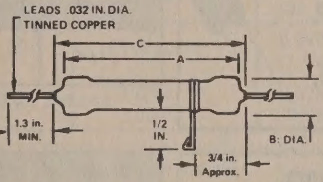
- Resists most industrial solvents
- Excellent moisture resistance
- High dielectric and low outgassing
- Maximum hot spot temperature of 180°C

SELECTING THE PROPER VICTOREEN DIVIDER

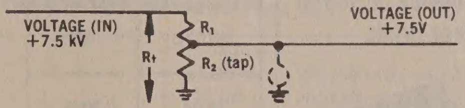
1. Select the proper divider based on input voltage limitations.
2. Determine that the input/output voltage ratio falls within the specified limits.
3. Choose the highest possible divider resistance value commensurate with circuit parameters, the wattage limitations of the divider, and within the specified resistance range.
4. Divide the resistance value selected by the input/output voltage ratio to obtain the tap resistance value. If this is greater than the minimum tap resistance for the divider selected, the divider can be fabricated. If the tap resistance value is less than the minimum, the divider resistance must be increased or other parameters adjusted.

EXAMPLE:

1. MOX-2RD; 7.5 kV.
   Input voltage cannot exceed 7.5 kV (maximum operating volts).
2. Output Required; 7.5V.
   $\frac{7.500\text{V}}{7.5\text{V}} = \text{1/0 ratio } 1000{:}1.$
   (Ratio limits from 500-5000 maximum permissible).
3. Total Divider resistance selected. Resistance selected 100MΩ (resistance range 5 Megs to 500 Megs).
   Wattage Limitation; 1.5W.
   High Stability Wattage; .15W or less.
   $W = \frac{E^2}{R} = \frac{(7.5 \times 10^3)^2 \text{ volts}}{1 \times 10^8 \text{ ohms}} = 56.25 \times 10^{-2} = .5625$
   Wattage does not fall within high stability power rating. However, it does not exceed maximum power rating of 1.5 watts.



4. To select the proper tap resistance, the following formula applies. (Figure 1).



$$R2 = \frac{V\,(\text{Out})}{V\,(\text{In})} \times R_t = \frac{7.5\text{V}}{7500\text{V}} \times 100 \text{ Megs}$$
$$= \frac{1}{1000} \times 100 \text{ Megs} \quad R2 = {}^*100 \text{ k}\Omega$$

*This value must be greater than stated minimum tap resistances of:
MOX-2RD — 10kΩ MOX-4RD — 20kΩ
MOX-3RD — 15kΩ MOX-5RD — 25kΩ

5. Measurement.
   When testing MOX-RD Dividers with low impedance meters please note:

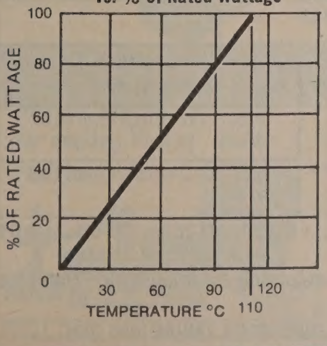
$$V\,(\text{Out}) = V\,(\text{In}) \times \frac{R2 \text{ (parallel with R meter)}}{R1 + R2 \text{ (parallel with R meter)}}$$

TABLE I—RESISTOR SPECIFICATIONS

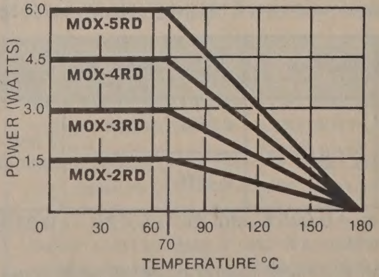
Model	(1)Resistance Range	(2)Power Rating @ 70°C	High Stability Power Rating(3)	(4)Max. Oper. Volts	Input/Output Voltage Ratio		Critical Resistance	Minimum Tap Resistance	Maximum Dimensions (Inches)		
					Min.	Max.			A	B	C
MOX-2RD	5 - 500 Megs	1.5W	0.15W	7.5 kV	500	5,000	37.5 Megs	10K ohms	2.140	.345	2.20
MOX-3RD	4.5-1000 Megs	3.0W	0.30W	15 kV	300	10,000	75 Megs	15K ohms	3.140	.345	3.20
MOX-4RD	6 -1500 Megs	4.5W	0.45W	22.5 kV	300	10,000	112.5 Megs	20K ohms	4.140	.345	4.20
MOX-5RD	7.5-2000 Megs	6.0W	0.60W	30 kV	300	10,000	150 Megs	25K ohms	5.140	.345	5.20

(1) Minimum total divider resistance dependent on maximum input/output voltage ratio.
(2) Derated to 0 watts @ 180°C.
(3) Recommended maximum power dissipation for highest stability.
(4) Applicable above critical resistance.

Temperature Rise Above Ambient vs. % of Rated Wattage



Temperature Derating Curve



These resistors are capable of dissipating higher wattages than rated if ambient temperatures are lower than 70°C or if forced air or oil cooling is employed. This additional capability can be determined in accordance with the temperature rise and the derating curves.

300144	2 (1 chip)	100Ω-40kΩ[3]		1 ppm/°C	0.320 (8.128) x 0.295 (7.493) x 0.100 (2.540)
300145	4 (2 chips)	100Ω-40kΩ[3]		1 ppm/°C, 3 ppm/°C[4]	0.375 (9.525) x 0.375 (9.525) x 0.200 (5.080)

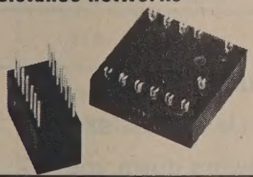
[1] Standardized circuits used throughout, with individual R values selected by user. For the 300144 and 300145 models, standard R ratio sets are available in addition to standard circuits. Consult factory for details.

[2] Resistance values below 100Ω are available. Consult factory.

[3] 40kΩ is the maximum resistance value per chip, and is divided between the two resistors on the chip.

[4] 1 ppm/°C between resistors R1 and R2 and between R3 and R4; 3 ppm/°C for all resistors as a set.

Standard and custom resistance networks



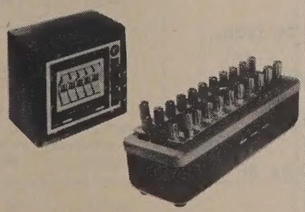
CUSTOM AND STANDARD BINARY LADDER NETWORKS, BCD LADDERS, ETC.

- Up to 16 bits
- ½ LSB to ±0.001 full-scale accuracy
- 25-ppm total impedance stability over 3 years

Besides designing completely custom precision networks to your most demanding specifications, Vishay offers standard binary R-2R ladder networks in 4-bit to 16-bit configurations (voltage-fed) with resistance values from 100 ohms to 50kΩ; 2R to 100kΩ.

Three basic package styles: **Profile 500,** 0.750″ (19.05mm) W x 0.500″ (12.70mm) H; **Profile 375,** 1.230″ (31.242mm) W x 0.365″ (9.271mm) H. Lengths dependent on number of bits: min. 0.700″ (17.78mm) for 4-bit Profile 500 to 2.14″ (54.356mm) for 16-bit ladder; min. 0.730″ (18.542mm) for Profile 375 to 2.59″ (65.786mm) for 15-bit package. **Profile 200,** 1.0″ (25.4mm) W x 1.0″ (25.4mm) L x 0.200″ (5.08mm) H only.

Decade resistance boxes, standards



DECADE RESISTANCE BOXES AND PANEL-MOUNTING MODULES

- Min. increment per step 0.01Ω
- ±0.005% accuracy at the terminals
- Long-term stability 5ppm/yr or 20ppm/yr

Lightweight benchtop decade box built with high-precision Vishay resistors; smallest size available with 7-digit resolution (less than one-third the size of other units). Also available for front-of-panel or back-of-panel mounting with terminals on front or rear.

RESISTANCE DECADE TRANSFER STANDARD

- Calibratable to 1ppm with 5ppm/yr stability
- Setting accuracy of ±0.001% with stability of 5 ppm/yr.

For calibrating resistance bridges, decades, voltage dividers, resistance networks. Made with hermetic-seal Vishay resistors, TCR of 0±1ppm/°C; 11 resistors in each of four models. All resistors "float," permitting series, parallel, and series-parallel combinations from 1/11 to 11 x the basic individual resistance value.

In-plant station for making Vishay resistors

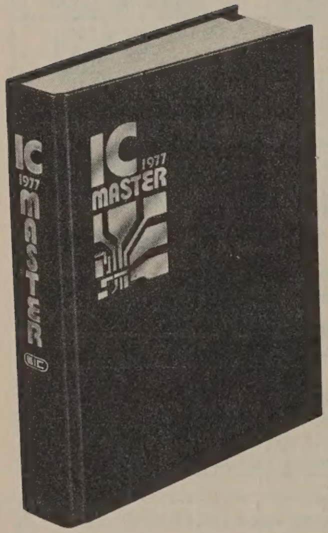
BENCHTOP STATION FOR CALIBRATING AND ENCAPSULATING VISHAY RESISTORS IN YOUR OWN PLANT

Model 290424 (115V 60Hz) or **Model 290425** (220V 50Hz) gives you a complete facility for obtaining custom resistors of Vishay quality within your own plant or laboratory. Ideal for breadboarding, prototype, and even for production runs.

Select a Vishay resistor chip of a resistance value closest to the final value you want. Then calibrate according to simple instructions provided, to tolerances as close as ±0.005%. Make resistors of any value from 2Ω to 100kΩ. Call for further information.

WHEN THE CHIPS ARE DOWN...

THE NEW 1977 IC MASTER PAYS OFF!



The new IC MASTER is the ultimate IC source book.

It lists virtually every IC device manufactured in the United States.

The IC MASTER is the easy, sensible means of narrowing down your IC choices quickly, accurately and systematically. All information is cross-referenced and indexed for rapid problem solving and device selection. And, additionally, the MASTER is updated three times yearly by accumulative supplements.

THE FORMAT OUTLINED:

- **FIVE MASTER SELECTION GUIDES** — 84 companies' IC's organized by type, function, key parameters
- **OVER 1,000 PAGES OF TECHNICAL INFORMATION** — Provided directly by manufacturers covering 17,000 IC's
- **ALTERNATE SOURCE DIRECTORY** — The only industry-wide, pin-for-pin version available
- **MILITARY PARTS INDEX AND CROSS REFERENCE CHART** — Identifies all IC's with JAN qualification
- **MILITARY DEVICE TESTING TABLE** — List companies that screen to Mil. Std. 883
- **MILITARY PARTS INDEX** — The first functional guide to JAN qualified parts
- **PART NUMBER INDEX** — Parts from 84 manufacturers, in numerical sequence
- **APPLICATION NOTE DIRECTORY** — Digest of currently active application note material
- **PRODUCT INDEX** — Provides alphanumeric listing of 84 manufacturers' lines
- **PART NUMBER GUIDE** — Instantly decodes each company's part numbering system
- **MANUFACTURERS AND DISTRIBUTORS DIRECTORY**

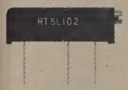
United Technical Publications, 645 Stewart Ave., Garden City, NY 11530

Allen-Bradley Trimming Potentiometers

TYPE E:
Cermet, single turn, 0.5W at 70°C, 10 ohms to 2 megs, ±10%, pin terminals, 13 types, top and side adjustment, linear taper.

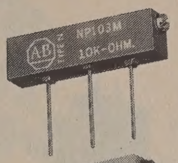
TYPE S:
Cermet, single turn, 0.5W at 85°C, 50 ohms to 1 meg, ±10%, pin terminals, top and side adjustment, linear taper.

TYPE A:
Cermet, single turn, 0.5W at 85°C, 10 ohms to 2 megs, ±10%, pin terminals, top and side adjustment, 6 types, linear taper.

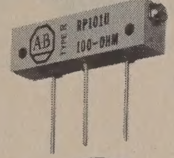


TYPE RT:
Cermet, 20 turns, 0.75W at 70°C, 10 ohms to 2 megs, ±10%, pin terminals, 8 types, linear taper, .250 inch or .340 inch high types. Clear housing also available in any of the lead configurations.

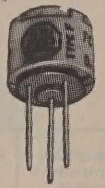
TYPE D:
Cermet, single turn, 0.5W at 70°C, 10 ohms to 2 megs, ±20%, pin terminals, 8 types, top and side adjustment, linear taper.



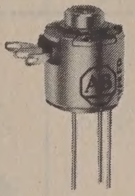
TYPE N.
Hot-molded composition, 25 turns, 0.33W at 50°C, 100 ohms to 2.5 megs, ±10% and ±20%, pin terminals, linear taper.



TYPE R:
Hot-molded composition, 25 turns, 0.25W at 70°C, 100 ohms to 2.5 megs, ±10% and ±20%, pin or solder lug terminals, linear taper.



TYPE F:
Hot-molded composition, single turn, 0.25W at 70°C, 100 ohms to 5 megs, ±10% and ±20%, pin or solder lug terminals, top and side adjustment, 5 standard tapers.

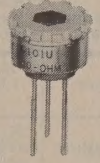


TYPE FD:
Dual version of Type F; front section: solder lug only, rear:pin or lug. Well suited for Bridged-T or L-pad attenuator applications.

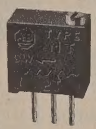
TYPE 90:
Cermet, single turn, 0.5W at 70°C, 100 ohms to 2 megs, ±20%, pin terminals, top and side adjustment, linear taper.

TYPE BT:
An all plastic version of the Type FD for excellent performance at high frequencies. Two terminal configurations available. Also well suited for Bridged-T or L-pad attenuator applications.

TYPE O:
Hot-molded composition, single turn, 0.4W at 70°C, 100 ohms to 5 megs, ±10% and ±20%, pin or solder lug terminals, 5 standard tapers.



TYPE Y:
Hot-molded composition, single turn, 0.25W at 50°C, 100 ohms to 5 megs, ±10% and ±20%, pin or solder lug terminals, 5 types, top and side adjustment, 5 standard tapers.



TYPE MT:
Cermet, 20 turns, 0.5W at 70°C, 10 ohms to 2 megs, ±10%, pin terminals, 7 types, top and side adjustment, linear taper.

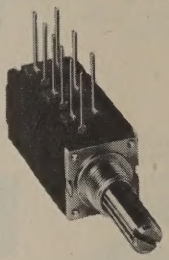
Allen-Bradley Variable Resistors

SERIES 70 MOD POT®: Modular design innovated by Allen-Bradley offers almost unlimited combinations: single, dual, triple or quadruple sections. Options include PC or solder lug terminals, variety of switches, vernier drives, concentric shafts, hot-molded composition, cermet or conductive plastic resistance elements.



SERIES 72 MOD POT®: Similar to Series 70, except the case, bushing and shaft are non-metallic. Available in single or dual combination only.

SERIES 73 MOD POT®: Another version of Series 70 for applications that require single or dual section controls.

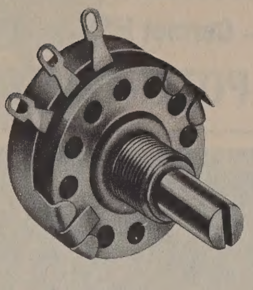
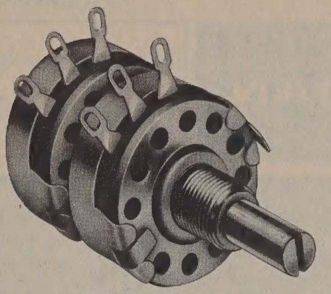
GD	5213						2		
L	5233			0.8 Watt @ 70°C		−55°C to +150°C	1		
W	5212			0.5 Watt @ 70°C		−55°C to +120°C			Dust and Splash Resistant
WR	5220			0.5 Watt @ 70°C					Immersion Sealed
SP	5216	Cermet	50 Ohms to 1 Megohm ±10% (5% available)	1.0 Watt @ 70°C	300V	−65°C to +150°C		0.438 *(11,11)* Deep by 0.375 *(9,52)* Diameter	
M	5239	Conductive Plastic	100 Ohms to 1 Megohm ±20%	0.1 Watt @ 40°C	90V	−25°C to +100°C	1 or 2	0.394 *(10.0)* Cubed All Versions	Dust and Splash Resistant

[1] All depth dimensions are maximum.

TYPE J (RV 4):
Standard of the industry for quality. Hot-molded composition, 50 ohm to 5 megs, ±10% and ±20% (special values to 1000 megs available), 2.25W at 70°C, single, dual, triple sections available. Switch for single or dual sections.

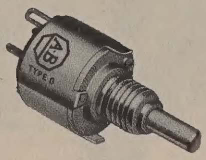


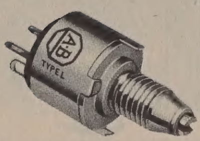


TYPE EJ:
Extra long life version of the Type J with rotational life exceeding one million rotations, single or dual configurations. Slip clutch available.

TYPE K:
A 3.0W at 70°C version of the popular Type J.

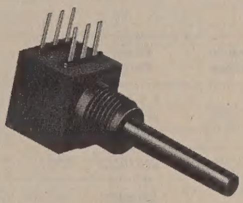
TYPE G (RV6):
Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70°C, single section available with or without SPST switch.

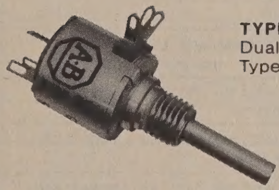




TYPE L:
Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.8W at 70°C, single section.

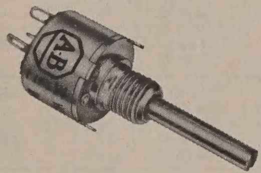
TYPE M:
Miniature conductive plastic, 100 ohms to 1 meg, ±20%, 0.1W at 40°C, single and dual sections available with or without SPDT switch. 5 terminal options. Non-metallic case, bushing and shaft.



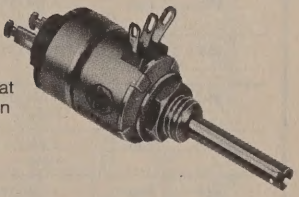


TYPE GD:
Dual section version of Type G.

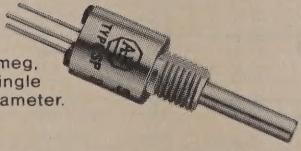
TYPE W:
Hot-molded composition, 100 ohms to 5 megs, ±10% and ±20%, 0.5W at 70°C, single section.



TYPE WR:
Radial-lead version of Type W. Available with or without switch. Switch versions offer contacts that close at start of clockwise rotation (TYPE WRS) or with switch with contacts that close at start of counter-clockwise rotation (TYPE WRH).



TYPE SP:
Cermet, 50 ohms to 1 meg, ±10%, 1.0W at 70°C, single section. Only ⅜ inch diameter.



Standard options for most types include linear and non-linear tapers, a variety of shafts, bushings, shaft endings, shaft lengths, and hardware.

Types GD, J and the multi-section MOD POT® with composition tracks are well suited for attenuator applications.

*Reverse rotation models.

†High profile models.

Notes:

1. Resistance tolerances shown as ±10% are for resistence values >100Ω and <500KΩ. Other values are ±20%.
2. All Helipot cermet trimming potentiometers have essentially infinite resolution.
3. Prices and specifications subject to change without notice.

BECKMAN®

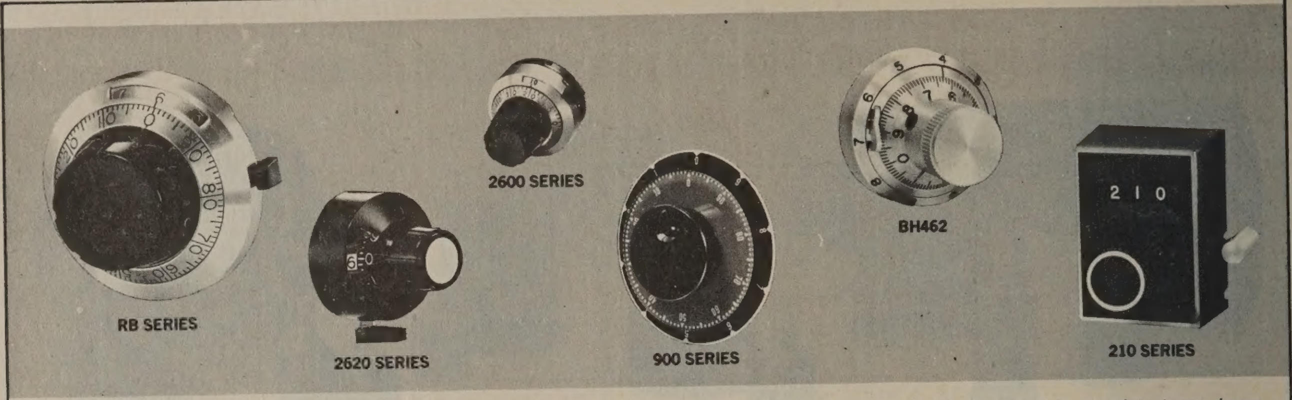
Duodial® & Digidial®

TURNS-COUNTING DIALS



RB SERIES—1-13/16" (46,04mm) diameter dials finished in satin chrome with black-filled numerals and divisions (RBD has matte black finish and white-filled numerals and divisions). Built-in vibration-proof locking mechanism—knob and locking lever cap made of black nylon. Models can be used with most potentiometers, or other device, having from 1 to 15 mechanical turns.

2600/2610 SERIES—Miniature 7/8" (22,23mm) diameter versions of the RB Series. Ideally suited for applications where panel space is limited. Primarily for use with 7/8" (22,23mm) diameter multi-turn potentiometers but can be used with devices of any size having from 1 to 15 mechanical turns. All models have satin chrome finish, black-filled numerals and divisions, vibration-proof locking mechanism with black nylon cap, and black nylon knob. Series 2610 has 100 divisions.

2620 SERIES—Compact 1" (25,4mm) diameter provides panel space savings while retaining excellent readability. White numerals on black background for fiftieths of a turn, and black numerals on white background for full turns. May be used with devices with from 1 to 10 adjustment turns. Positive locking mechanism prevents accidental changes of setting, due to vibration or sudden shock. Rugged black housing and knob help assure long life and carefree operation. Model 2621 is designed for mounting on 1/8" (3,17mm) shafts, Models 2626 and 2627 mount on ¼" (6,35mm) shafts.

900 SERIES—Ideally suited to applications where precise settings and readability are required. 4¾" (12,07cm) diameter permits greater accuracy of setting. Outer dial is graduated in complete turns, inner vernier dial is graduated in hundredths. Settings can be made easily to three significant figures and estimated accurately to a fourth. For rapid changing of settings, an eccentric finger-hole is provided in the adjustment knob. The inner vernier dial and knob are made of plastic to eliminate body capacitance which might affect the setting. Since the knob is connected to the potentiometer shaft, backlash is thereby eliminated.

BH SERIES — Models BH462 and BH1462 offer quality appearance and reliable performance. High contrast black numerals on a clear anodized aluminum or grey plastic background allow ease of readability in either high or low ambient lighting. The primary dial is rigidly fixed to the shaft eliminating backlash. Ten complete turns of adjustment offer a full range of settings from 000 to 999. Combining precision features with attractive design are good reasons to use Beckman's Model BH462 and BH1462 on your next application.

210 SERIES—Miniature dials that have the same distinctive styling as the 205 Series, yet occupy less than 50% of the panel area. Their small size and excellent readability make them an ideal choice for use with potentiometers having a 1-13/16" (46,04mm) diameter or less. They have die cast zinc case finish with matte black enamel. Brushed aluminum locking lever prevents accidental movement and can be actuated without disturbing the setting.

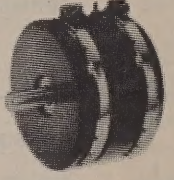
3, 5, &10 Turn

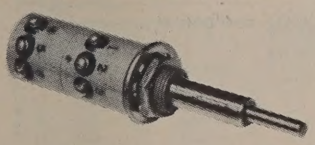


20 Series
3, 5, & 10 Turn

Sizes: 09, 18, 20, —3, 5, 10, 20 Turn Potentiometers
Multiple-cup ganging with independent phasing
All welded internal connections
250 to 500 K ohms
Rt TOL: ±5% standard, ±1% optional
Multiple taps
Wattage up to 4 watts
(approx. 1.5 watts per inch of diameter)
Linearity: to ±.015%
Temperature Coefficient: 0.002%/°C

ALL MODELS TESTED TO MEET OR EXCEED ML-R-12934

CONCENTRIC SHAFTS 2 GANG MINIATURE

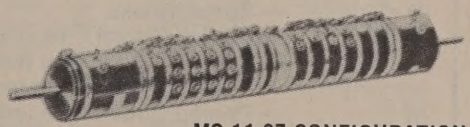


A new series of miniature 2-gang potentiometers with aerospace quality and performance capability, the Series PVR05, is now available to the engineer beset with space and weight restrictions. Dual concentric shafts allow independent operation of each gang. Smooth 3 oz. in. friction torque on each shaft provides adjustment stability. Mechanical stop strengths of 80 oz. in. prevents damage to the unit.

All this is available in a .625″ dia. x 1.500″ long unit weighing only 1 oz. (28 gms). A slightly longer unit (1.750″) weighing 1.16 oz. (33 gms) with a switch and detent operated by the rear potentiometer shaft is also available. The detent torque is a crisp 10 oz. in. for positive feel. Price and delivery varies with the many design variations of the new series.

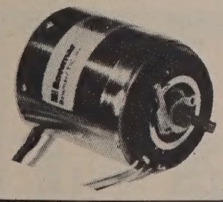
VARI (F)UNCTION MODULES

Unitized Pot-Clutch Modules consisting of potentiometers, clutches, spring returns, synchro, brake combinations on an in line module.



MC 11-37 CONFIGURATION

DC TORQUER CP POTENTIOMETER COMBINATION



Temperature Coefficient: 300 ppm/°C max.
Standard Resistance Ranges: 500 ohms to 250 K ohms
Mechanical Angle: Continuous or limited
Power: .25 watt @ 125°C (potentiometer element only)
Accuracy: ±.25% independent linearity
Operational Temperature Range: —60°F to +250°F
Operational Altitude: 0 feet to 45,000 feet
Life: 30,000,000 cycles min.
Starting Torque: .2 in. oz. (max)
Output Potentiometer Smoothness: Per MIL-R-39203 0.1%
Condition C
Motor Input Voltage: 6 VDC—other voltages available

DESIGNED TO MEET OR EXCEED ENVIRONMENT TESTS CONDUCTED IN ACCORDANCE WITH MIL-R-5272

PART NUMBERING SYSTEM

3006 P - 1 - 102 M

MODEL — 3006

TERMINAL TYPE see key below — P

CATALOG ITEM 2 or 3 digits indicate a special — 1

RESISTANCE CODE see below — 102

PANEL MOUNT if applicable — M

KEY TO TERMINAL TYPES

J	— Solder Hooks
L	— Insulated Stranded Leads
S	— Solder Hooks
P,T,Y	— Printed Circuit Pins (flat mounting)
H	— Printed Circuit Pins (see individual model catalog sheet for details)
W	— Printed Circuit Pins (edge mounting)
W-66 or X	— Printed Circuit Pins (edge mounting, side adjustment for worm gear units only)

Model 3386 only:

H,S,W	— Printed Circuit Pins (edge mounting)
P,R,T,K*,F*	— Printed Circuit Pins (flat mounting)*
D	— Printed Circuit Pins (DIP socket spacing)

NOTE: All models except 3352, 3353, 3355, 3359 are sealed against sand and dust

RESISTANCES

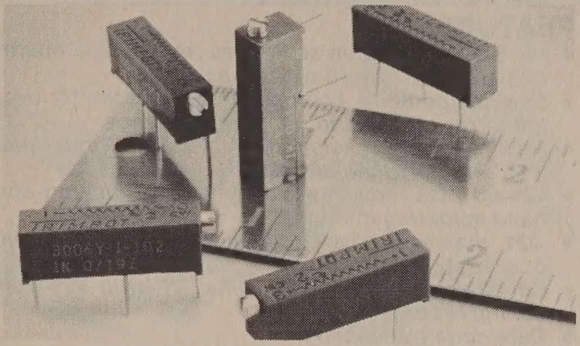
MODEL 3006*

COMMERCIAL TRIMPOT® POTENTIOMETER
CERMET ELEMENT

TRIMPOT® ADJUSTMENT POTENTIOMETER
BOURNS®

FEATURES

- *Low cost.*
- *Low PC board profile, only ¼" off the board.*
- *Stable cermet element offers continuous resolution.*
- *High power rating: 0.75 watt at 70°C.*
- *Low temperature coefficient: 100 ppm/°C over −55° to +125°C temperature range.*
- *Sealed to MIL-R-22097 standard; withstands industrial cleaning processes.*
- *16 independent wiper contacts assure excellent setability.*
- *Wiper assembly idles at both ends of travel eliminating the possibility of damage from forced adjustment.*



** Patent No. 3,659,245*

SPECIFICATIONS

ELECTRICAL CHARACTERISTICS

Standard Resistance Range (see chart on front) . . . . . 10 to 2,000,000 ohms
Resistance Tolerance . . . . ±10% standard, closer tolerances available
Absolute Minimum Resistance . . . . 3.0% or 1.0 ohm, whichever is greater
Continuity . . . . Maintained for full mechanical range
Insulation Resistance: 500 volts DC . . . . 100 megohms minimum
Contact Resistance Variation, Maximum . . . . 3 ohms or 3%, whichever is greater
Resolution . . . . Infinite
Setability (Voltage Divider) 0.02%

ENVIRONMENTAL CHARACTERISTICS

Power Ratings:
25°C . . . . 1.25 watt
70°C . . . . 0.75 watt
125°C . . . . 0.25 watt
Operating Temperature Range . . . . −55° to +125°C
Temperature Coefficient . . . . ±100 ppm/°C all resistances maximum
Humidity, MIL-STD-202, Method 106 . . . . 20 megohms minimum insulation resistance after removal from chamber
Seal . . . . . . Meets immersion requirements of MIL-R-22097
Vibration 20Gs
Contact Bounce . . . . 0.1 millisecond maximum
Wiper Shift, Maximum 2.0%
Shock 50Gs
Contact Bounce and Wiper Shift . . . . . . Same as vibration
Load Life . . . . 1,000 hours 0.75 watt at 70°C
Mechanical Life . . . . 200 cycles without discontinuity
Dielectric Strength
Room Conditions . . . . 1,000 volts AC
80,000 feet (0.8" hg) . . . . 250 volts AC

PHYSICAL CHARACTERISTICS

Shaft Torque . . . . 5.0 oz.-in. maximum
Markings . . . . Manufacturer's name or symbol, wiring diagram, date code, resistance and manufacturer's part number (customer's part number optional)
Appearance . . . . Legible markings, no physical defects
Mechanical Adjustment . . . . 15 turns nominal
Mechanical Stops . . . . Wiper assembly idles
Weight . . . . Approximately 0.1 oz.
Terminals . . . . Solderable pins

Specification Note: Closer performance tolerances can be supplied upon request.

Specifications are subject to change without notice.

COMMERCIAL E-Z-TRIM® POTENTIOMETER
CERMET ELEMENT

TRIMPOT® ADJUSTMENT POTENTIOMETER
BOURNS®

FEATURES

- *Mil-Spec immersion seal gives trouble-free operation after P.C. board processes.*
- *Low temperature coefficient: ±100 ppm/°C over entire resistance and temperature range.*
- *Stable, infinite resolution PALIRIUM® Cermet element and outstanding ±0.05% setability.*
- *Tinned pins for compatibility with automated and hand soldering methods.*
- *.021 diameter pins alleviate complicated circuit board fabrication.*
- *Space-saving size: .75" x .19" x .35" with RJ11 pin configuration.*
- *Date code traceability.*
- *Wiper assembly idles at both ends of travel, preventing damage from forced adjustment.*

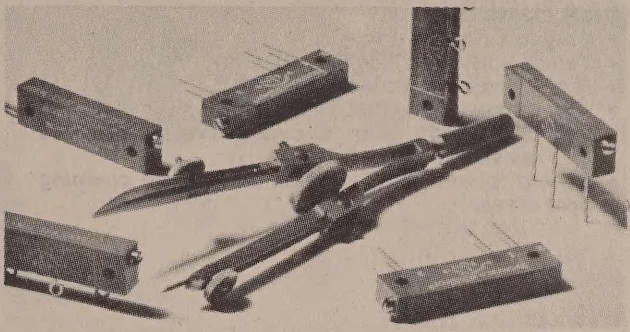
POTENTIOMETER—1¼″ LONG
INDUSTRIAL—CERMET

TRIMPOT® ADJUSTMENT POTENTIOMETER
BOURNS®

FEATURES

- *Meets or exceeds all requirements of MIL-R-22097, Characteristics C, F, Style RJ12 and MIL-R-39035, Style RJR12*
- *Complete resistance range: 10 ohms to 2 megohm*
- *High operating temperature (150°C)*
- *High power dissipation 1.0 watt at 70°C*



SPECIFICATIONS

ELECTRICAL CHARACTERISTICS

Standard Resistance Range .... 10 ohms to 2 megohm
Resistance Tolerance .... ±10% standard, closer tolerances available
Absolute Minimum Resistance .... 2 ohms maximum
Continuity .... Maintained for full mechanical range
Insulation Resistance, 500 volts DC .... 1000 megohms minimum
Contact Resistance Variation, Maximum .. 3 ohms or 3.0%, whichever is greater
Adjustability*
  Voltage Ratio .... ±0.05%
  Resistance .... ±0.10%

ENVIRONMENTAL CHARACTERISTICS

Power Ratings
  70°C .... 1.0 watt or 400 volts maximum
  150°C .... 0 watt
Operating Temperature Range .... −55 to +150°C
Temperature Coefficient Maximum .... ±100 ppm/°C all resistances
Humidity, MIL-R-22097 .... 100 megohms minimum insulation resistance afterremoval from chamber
Vibration MIL-R-22097, 20G
  Contact Bounce .... 0.1 millisecond maximum
  Wiper Shift, Maximum .... 1.0% voltage ratio
Shock MIL-R-22097, 50G
  Contact Bounce and Wiper Shift ..... Same as Vibration

Salt Spray .... Meets MIL-STD-202, Method 101A
Load Life .... 1000 hours per MIL-R-22097
  Resistance Shift, Maximum 2.0%
Mechanical Life .... 200 cycles without discontinuity
Dielectric Strength MIL-R-22097
  Room Conditions .... 900 volts AC
  70,000 feet .... 350 volts AC

PHYSICAL CHARACTERISTICS

Immersion Leak Test .... No leaks
Shaft Torque .... 5.0 oz.-in. maximum
Markings .... Manufacturer's name, wiring diagram, date code, resistance and manufacturer's part number. (Customer's part number optional)
Appearance .... Legible markings, no physical defects
Mechanical Adjustment .... 22 ±5 turns
Mechanical Stops .... Wiper assembly idles
Weight .... Approximately 0.1 oz.
Terminals:
  L ...... Teflon-insulated, standard leads, 30 AWG (0.024) O.D.) 7 strands/38 AWG
  P, Y .... Solderable circuit pins
  J .... Solderable solder lugs

Specification Note: Closer performance tolerances can be supplied upon request.

Specifications are subject to change without notice.

* The precision with which the output voltage ratio or output resistance of a device can be set to the desired value.

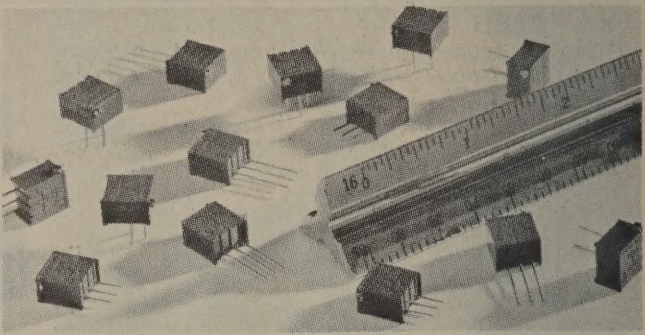
COMMERCIAL CERMET POTENTIOMETER
⅜" SQUARE

TRIMPOT® ADJUSTMENT POTENTIOMETER
BOURNS®

FEATURES

- *Very low cost.*
- *Typical CRV of 3% (1% available)*
- *High power rating: ½ watt @ 70°C.*
- *Small size: .375" x .395" x .240" high.*
- *Low T.C.: ±100 ppm/°C over entire temperature and resistance range.*
- *Sealed to withstand wave-soldering and cleaning processes.*



SPECIFICATIONS

ELECTRICAL CHARACTERISTICS

Standard Resistance Range (see chart on front) .... 10Ω to 1,000,000 ohms
Resistance Tolerance .... ±10% standard, closer tolerances available
Absolute Minimum Resistance .....5 ohms, all resistances
Continuity .... Maintained for full mechanical range
Insulation Resistance, 500 volts DC .... 1,000 megohms minimum
Contact Resistance Variation Maximum .... 3 ohms or 3%, whichever is greater. Consult factory for 1%

ENVIRONMENTAL CHARACTERISTICS

Power Ratings:
70°C .... 0.5 watt or 300 volts maximum
125°C .... .0 watt
Operating Temperature Range .... —55° to +125°C
Temperature Coefficient per MIL-R-22097 .. ±100 ppm/°C maximum all resistances
Moisture Resistance, MIL-STD-202D, Method 103B ..... 10 megohms minimum insulation resistance after removal from chamber
Seal .... Withstands industrial cleaning processes
Vibration .... Exceeds MIL-R-22097, 20Gs
Contact Bounce .... 0.1 millisecond maximum
Wiper Shift Maximum .... 1.0% voltage ratio
Shock .... Exceeds MIL-R-22097, 100Gs
Contact Bounce and Wiper Shift ..... Same as vibration
Salt Spray .... Meets MIL-R-22097
Load Life .... 1,000 hours per MIL-R-22097
Resistance Shift, maximum 3%
Mechanical Life .... 200 cycles without discontinuity
Dielectric Strength MIL-R-22097
Room Conditions .... 900 volts AC minimum
70,000 feet.................... 350 volts AC minimum

PHYSICAL CHARACTERISTICS

Shaft Torque .... 3 oz.-in. maximum
Markings .... Manufacturer's name, wiring diagram, date code, resistance and manufacturer's model number (customer's part number optional)
Mechanical Adjustment .... 25 ±5 turns
Mechanical Stops .... Wiper assembly idles
Weight .... Approximately .04 oz.
Terminals:
P, X, W .... Solderable printed circuit pins
Mounting .... Mount by printed circuit pins
Specification Note: Closer performance tolerances can be supplied upon request.
Specifications are subject to change without notice.

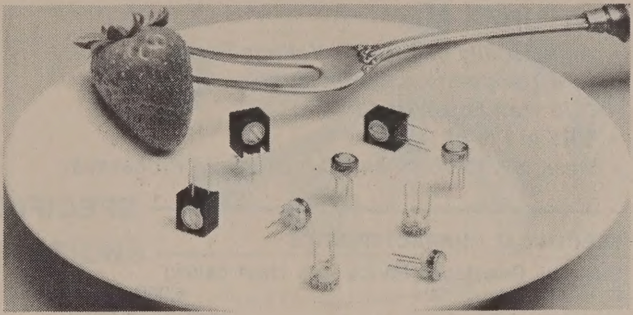
MODEL 3329

SINGLE TURN, COMMERCIAL
CERMET ELEMENT

TRIMPOT® ADJUSTMENT POTENTIOMETER
BOURNS®

FEATURES

- *Low cost commercial Cermet single turn capable of meeting MIL-R-22097.*
- *Space saving size: 0.25" dia. x 0.18" high.*
- *Low temperature coefficient: ±100 ppm/°C over entire temperature and resistance range.*
- *0.5 watt power rating at 85°C.*
- *Extended temperature range: —55° to +150°C.*
- *Sealed to withstand any wave soldering and immersion cleaning process.*



SPECIFICATIONS

ELECTRICAL CHARACTERISTICS

Standard Resistance Range (see chart on front) . . 10 ohms to 1 megohm
Resistance Tolerance . . . . 20% standard, closer tolerances available
Absolute Minimum Resistance . . . . 2 ohms
Continuity . . . . Maintained for full mechanical range
Contact Resistance Variation Maximum . . . . 3 ohms or 3%, whichever is greater
Insulation Resistance, 500 volts DC . . . . 1,000 megohms minimum

ENVIRONMENTAL CHARACTERISTICS

Power Ratings:
85°C . . . . 0.5 watt
150°C . . . . 0 watt
Operating Temperature Range . . . . —55° to +150°C
Temperature Coefficient . . . . Maximum ±100 ppm/°C all resistances
Humidity, MIL-STD-202, Method 103 . . . . 10 megohms minimum insulation resistance after removal from chamber
Vibration . . . . Exceeds MIL-R-22097, 30G
Contact Bounce . . . . 0.1 millisecond maximum
Shock . . . . Exceeds MIL-R-22097, 100G
Contact Bounce . . . . Same as Vibration
Salt Spray . . . . Meets MIL-R-22097
Load Life . . . . 1,000 hours per MIL-R-22097
Mechanical Life . . . . 200 cycles without discontinuity
Effective Electrical Rotation . . . . 240° nominal
Dielectric Strength MIL-R-22097
Room Conditions . . . . 600 volts AC minimum

PHYSICAL CHARACTERISTICS

(85°C) Immersion Leak Test . . . . No leaks
Markings . . . . Date code, resistance, and manufacturer's model number
Appearance . . . . Legible markings, no physical defects
Mechanical Stops . . . . Solid
Shaft Torque . . . . 5.0 oz.-in. maximum
Weight . . . . Approximately 0.08 oz.
Terminals H.P.W. . . . . Tinned Pins

Specification Note: Closer performance tolerances can be supplied upon request.

Specifications are subject to change without notice.

MODEL 3355

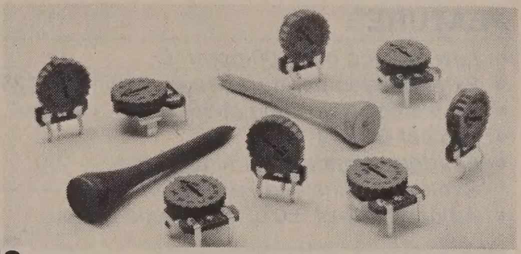
SINGLE TURN CONDUCTIVE PLASTIC
ECONOMY TRIMMER

TRIMPOT® ADJUSTMENT POTENTIOMETER

BOURNS®

FEATURES

- *Available from 100 ohms to 5 megohms.*
- *Resistance tolerance ±20%.*
- *Rated 0.25 watt maximum at 70°C.*
- *Tempco less than ±500 PPM/°C.*
- *Flame retardant construction meets UL94V-1.*
- *Integral thumbwheel is standard.*
- *Board wash capability.*
- *Adjustability 0.1%.*



SPECIFICATIONS

ELECTRICAL CHARACTERISTICS

Standard Resistance Range (see chart below) . . . 100 ohms to 5 megohms
Resistance Tolerance . . . . ± 20%
Adjustability:*
  Voltage Ratio . . . . ± 0.1% maximum
  Resistance . . . . ± 0.2% maximum
Contact Resistance Variation . . . . 1% maximum
Absolute Minimum Resistance . . . . 2 ohms maximum
Effective Electrical Angle . . . . 240° ± 10°
Voltage Coefficient . . . . .08% / Volt maximum

ENVIRONMENTAL CHARACTERISTICS

Power Ratings:
  25°C . . . . 0.50 watt
  70°C . . . . 0.25 watt
  100°C . . . . 0 watt
Operating Temperature Range . . . . 0°C to 100°C
Temperature Coefficient . . . . 500 PPM/°C maximum
Humidity, 24 hours at 95% RH . . . . Resistance shift ±7.5% maximum
Vibration . . . . 30 g's
  Contact Bounce . . . . 0.1 millisecond maximum
Shock . . . . 100 g's
  Contact Bounce . . . . 0.1 millisecond maximum
Load Life . . . . 100 hours, 70°C, ¼ W.
  Resistance Shift . . . . ± 5% maximum
Mechanical Life . . . . 200 Cycles without discontinuity
Flammability . . . . Meets UL 94V-1
Solvent Resistance . . . . Withstands most cleaning solvents and detergents
  Resistance Shift . . . . ± 5% maximum

PHYSICAL CHARACTERISTICS

Mechanical Rotation . . . . 260° ± 10°
Markings . . . . Manufacturer's name, model number, resistance value
Appearance . . . . Legible markings, no physical defects
Mechanical Stops . . . . Solid
Adjustment Torque . . . . 3 oz.-in. maximum
Weight . . . . Approximately 1.3 grams
Terminals . . . . Solderable snap-in pins

*The precision with which the output voltage ratio or output resistance of a device can be set to the desired value.

Blue is the standard color on all adjustment wheels. Optional colors (available only on the Standard Thumbwheel style) are: Black, White, Violet, Green, Yellow, Orange, Red and Brown. Consult the factory for ordering these optional colors.

Specification Note: Closer performance tolerances can be supplied upon request.
Specifications are subject to change without notice.

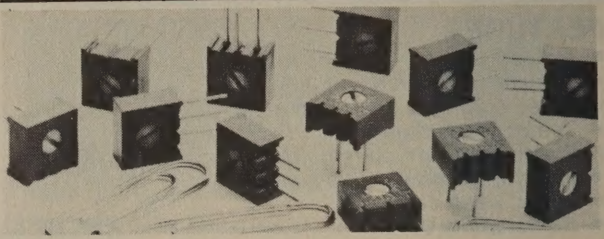
COMMERCIAL, CERMET POTENTIOMETER
⅜" SQUARE

BOURNS® ADJUSTMENT POTENTIOMETER
BOURNS®

FEATURES

- *Low tempco of ±100 ppm/°C*
- *Extended temperature range: −55° to +125°C*
- *0.5 watt power rating at 85°C*
- *Typical CRV of 1%*
- *Fourteen standard terminal styles*
- *Sealed to withstand immersion*
- *Adjustability of ±0.03% Voltage Ratio*



SPECIFICATIONS

ELECTRICAL CHARACTERISTICS

Standard Resistance Range (see chart below) .... 10 to 2,000,000 ohms
Resistance Tolerance* .... 10% standard, closer tolerances available
Absolute Minimum Resistance* .... 2 ohms maximum
Adjustability:
  Voltage Ratio .... ±0.03%
  Resistance .... ±0.10%
Contact Resistance Variation* .... 1 ohm or 1% maximum whichever is greater
Insulation Resistance, 500 volts DC .... 1,000 megohms minimum

PHYSICAL CHARACTERISTICS

Seal* .... MIL-R-22097 immersion
Markings* .... Date code, resistance value, and model number
Appearance* ...... Legible markings, no physical defects
Mechanical Stops .... Solid
Shaft Torque .... 5.0 oz.-in. maximum
Weight .... Approximately 0.03 oz.
Terminals .... .020 in. Dia. Solderable Pins

*Inspection Note: Applicable 100% or statistical sampling inspection performed to insure highest quality.

ENVIRONMENTAL CHARACTERISTICS

Power Ratings:
  85°C (300 VAC Maximum) .... 0.5 watt
  125°C .... 0 watt
Operating Temperature Range .... −55° to +125°C
Temperature Coefficient .... ±100 ppm/°C
Humidity, MIL-STD-202, Method 103 .... 10 megohms minimum insulation resistance after removal from chamber
Vibration .... Exceeds MIL-R-22097, 30Gs
  Contact Bounce .... 0.1 millisecond maximum
Shock .... Exceeds MIL-R-22097, 100Gs
  Contact Bounce .... 0.1 millisecond maximum
Load Life .... 1,000 hours per MIL-R-22097
  Resistance Shift maximum 3%
Mechanical Life .... 200 cycles without discontinuity
Effective Electrical Rotation .... 280° ±15°
Mechanical Rotation .... 310° ±15°
Dielectric Strength MIL-R-22097
  Room Conditions .... 900 volts AC minimum

Specification Note: Closer performance tolerances can be supplied upon request.

Specifications are subject to change without notice.

* The precision with which the output voltage ratio or output resistance of a device can be set to the desired value.

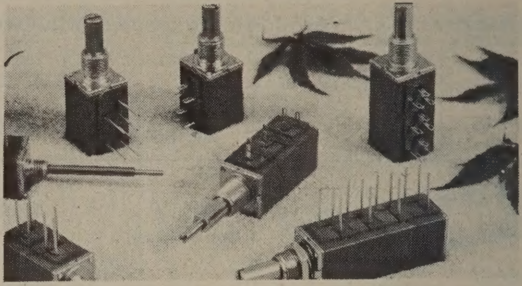
MODEL 81/82

BOURNS®

MODULAR POTENTIOMETER SINGLE OR MULTIPLE ⅝" SQUARE SECTIONS BUSHING MOUNT CERMET AND/OR CONDUCTIVE PLASTIC ELEMENTS

BOURNS® Model 81/82 MODULAR potentiometer combines the design versatility of advanced modular construction with factory assembled reliability and quality assurance. The net result is a consistently high quality ⅝" square panel potentiometer that can be delivered in single or multiple section configurations to suit your specific application . . . from off-the-shelf components . . . at low cost. The Model 81/82's unique shaft torque control feature provides a smooth, high quality feel that will enhance the "human engineering appeal" of your equipment. This feature enables Bourns to produce a panel potentiometer that has a remarkably consistent feel (torque range only .3 to 2.0 oz.-in.) from unit-to-unit . . . regardless of the number of modules ganged on a single shaft.



SPECIFICATIONS

ELECTRICAL CHARACTERISTICS	CONDUCTIVE PLASTIC	CERMET
Standard Resistance Range		
(Tapers A, B, H & E)	(B & E) 250 to 5,000,000 ohms	(A & H) 50 to 5,000,000 ohms
(Tapers C, D, F & G)	(D & G) 1000 to 2,500,000 ohms	(C & F) 1000 to 2,500,000 ohms
Resistance Tolerance	±20% standard (B, D & G tapers) ±10% available (E taper)	±10% Standard (A, C and F tapers) ±5% Available (H taper)

* Available in Cermet only

NOTES:

1. Taper and Resistance Code for 1st Section.
2. Taper and Resistance Code for 2nd Section.
3. Shaft length code is based on the number of ¹⁄₃₂″ increments in the length from the mounting surface (FMS). Shaft lengths other than those listed are available on special order. Dual concentric shaft length code indicates length of inner shaft. Standard length of outer shaft is ⅜″ less. Consult factory for non-standard concentric shaft lengths or module drive combinations.
4. Other anti-rotation lug options, resistance values, tapers and shaft end styles are available on special order. Consult factory for details.

MODEL 85/86

MODEL 81/82 MODULAR POTENTIOMETER WITH ROTARY SWITCH MODULE (Pat. Pend.)

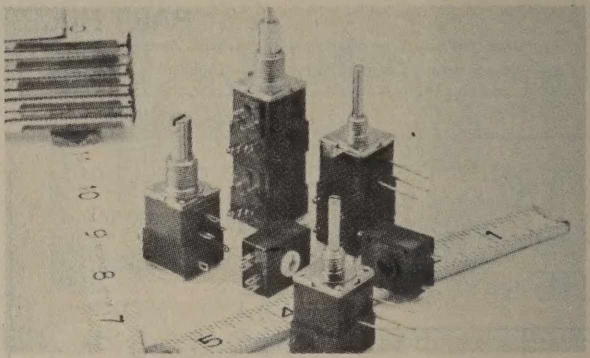
BOURNS®

The Bourns® Model 81/82 "Modular" Potentiometers are available with optional rotary switch modules for applications where integral "on-off" function control is desired. The combination is designated the Model 85/86.

Switch modules may be ganged behind a primary potentiometer module in any combination of up to three switches and/ or secondary potentiometer modules.

A positive action "non-tease" detent design with low actuation torque, compliments the smooth feel of the Model 81/82 Potentiometer.

Contacts of fine silver with gold overlay provide exceptionally low contact resistance for reliable operation in low level analog or logic circuits.



SPECIFICATIONS

ELECTRICAL CHARACTERISTICS

Contacts	
DPST	N.O./N.C. Std.
DPDT	2 Pr. Transfer-Std. (Break before make)
Power Rating (Resistive Load)	
DPST	2 A. @ 125 VRMS-60 Hz. or 2 A. @ 28 V. DC
DPDT	1 A @ 125 VRMS-60 Hz. or 1 A. @ 28 C. DC
Dielectric Strength	
Sea Level	1000 VRMS-minimum
Insulation Resistance	1000 megohms
Contact Resistance (.1 V. DC-1 ma.)	10 milliohms maximum
Contact Bounce	5 milliseconds maximum

MECHANICAL CHARACTERISTICS

Detent Actuating Torque (Each Section-Switch Module only)	3-7 oz.-in.
Shaft Torque (Out of Detent, 2-4 Module Assembly)	0.5-2 oz.-in.
Detent	CW or CCW-Std.
Actuation Angle	20° ±5%
Contacts	Fine Silver with Gold Overlay
Terminals	Solder Lug only
Standard Orientation	In-Line with Control Terminals
Optional	Rotated 90° CCW from Standard
Terminal Strength (Before and After Soldering Heat Exposure)	2 lb. minimum

ENVIRONMENTAL CHARACTERISTICS

Operating Temperature Range	0°C to +70°C
Power Rating	As Specified
Contact Resistance	10 milliohms maximum
Actuating Torque (SW. only)	3-7 oz.-in.
Exposure Temperature Range	—65°C to +125°C
Vibration 8 G's (Dual Section)	44-2000 Hz.
Contact Resistance	10 milliohms maximum
Contact Bounce	0.1 millisecond maximum
Shock, 20 G's (Dual Section)	
Contact Resistance	10 milliohms maximum
Contact Bounce	0.1 millisecond maximum
Rotational Life (50% Duty Cycle @ Rated Power Load)	25,000 Cycles
Actuating Torque (SW only)	2-7 oz.-in.
Moisture Resistance	MIL-STD-202, Method 106
Contact Resistance	10 milliohms maximum
Insulation Resistance (After 24 Hours @ Room Temperature)	100 megohms minimum
Housing Material	High Temperature, Flame Retardant Thermosetting Plastic

NOTES:

1. Taper and Resistance Code for 1st Section.
2. Switch Code for 2nd Section. See back page for Switch Code and description of switches available as special option.
3. Shaft length code is based on the number of 1/32" increments in the length from the mounting surface (FMS). Shaft lengths other than those listed are available on special order. Dual concentric shaft length code indicates length of inner shaft. Standard length of outer shaft is 3/8" less. Consult factory for non-standard concentric shaft lengths or module drive combinations.
4. Other anti-rotation lug options, resistance values, tapers and shaft end styles are on special order. Consult factory for details.

Specifications are subject to change without notice.

Specification Note: Closer performance tolerances can be supplied upon request.

MODEL 87/88

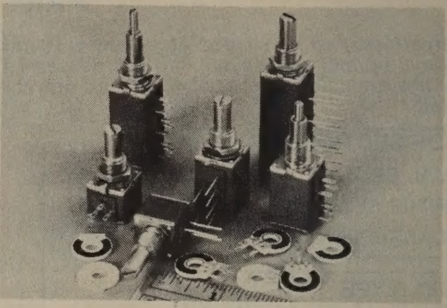
SEMI-PRECISION/MODULAR POTENTIOMETER/SINGLE OR MULTIPLE ⅝" SQUARE SECTIONS BUSHING MOUNT/CERMET AND/OR CONDUCTIVE PLASTIC ELEMENTS

BOURNS®

The BOURNS® Model 87/88 semi-precision modular potentiometer is a unique new control designed to fill the performance and price gap between low-cost industrial controls and single-turn precision potentiometers.

The 87/88 is available with either cermet or conductive plastic resistive elements with a zero-based linearity as low as 2% standard or 1% optional. This linearity will satisfy the more exacting requirements of applications where the output of the equipment must be related to a front panel control (dial) setting.

An exclusive shaft torque control feature provides a remarkably consistent feel (torque range of only .3 to 2.0 oz.-in.) from unit-to-unit, regardless of the number of modules ganged on a single shaft.



SPECIFICATIONS

ELECTRICAL CHARACTERISTICS	CONDUCTIVE PLASTIC	CERMET
Standard Resistance Range	250 to 2,500,000 ohms	250 to 2,500,000 ohms

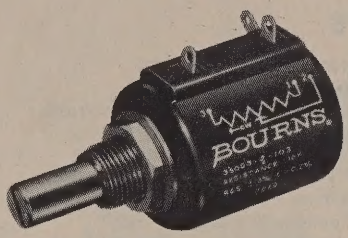
MODEL 3500

⅞" DIAMETER 10-TURN BUSHING MOUNT
WIREWOUND ELEMENT

PRECISION POTENTIOMETER
BOURNS®

FEATURES

- *0.20% linearity (standard)*
- *20% longer resistance element in a compact housing only 1.00" long*
- *Extended temperature range −65 to +125°C*
- *Housing high temperature, moisture resistant thermosetting plastic.*
- *SILVERWELD® termination eliminates vulnerable single wire termination.*
- *Performance of Model 3500 is guaranteed by the Bourns Reliability Assurance Program which includes individual inspection to published electrical and physical characteristics*
- *Custom design capability is available to satisfy your most demanding and difficult special requirements.*



STANDARD SPECIFICATIONS

THE SPECIFICATIONS LISTED BELOW ARE FOR THE STANDARD MODEL. MODIFICATIONS OF ALL TYPES (MECHANICAL, ELECTRICAL AND ENVIRONMENTAL) CAN BE CUSTOM ENGINEERED TO YOUR SPECIFIC REQUIREMENTS.

ELECTRICAL CHARACTERISTICS

Resistance Range	50 ohms to 500K ohms
Resistance Tolerance	±3%
Linearity (Independent)	±0.20%
Resolution	See Standard Resistance Table
Effective Electrical Angle	3600° (+10°/−0°)
Absolute Minimum Resistance	1.0 ohm or 0.1%, whichever is greater
Noise	100 ohms ENR maximum
Power Rating	
70°C	2.0 watts
125°C	.0 watt
Dielectric Strength	MIL-R-12934
Room Conditions	1500 volts AC minimum
70,000 feet (0.8" hg.)	400 volts AC minimum
Insulation Resistance 500 volts DC	1000 megohms minimum

ENVIRONMENTAL CHARACTERISTICS

Temperature Range	−65 to +125°C
Temperature Coefficient of Wire [1]	20 ppm/°C maximum
Humidity	MIL-R-12934 humidity cycling
Vibration	MIL-R-12934, 20G
Wiper Bounce	0.1 millisecond maximum
Wiper Shift	0.1% maximum
Shock	MIL-R-12934, 100G
Wiper Bounce and Wiper Shift	Same as Vibration
Load Life	MIL-R-12934, 1000 hours
Resistance Shift	2.0% maximum
Sand and Dust	MIL-E-5272
Fungus	MIL-E-5272
Salt Spray	MIL-R-12934

MECHANICAL AND PHYSICAL CHARACTERISTICS

Mechanical Angle	3600° (+10°/−0°)
Shaft Runout	.002 in. T.I.R.
Lateral Runout	.005 in. T.I.R.
Pilot Diameter Runout	.002 in. T.I.R.
Shaft End Play	.005 in. T.I.R.
Shaft Radial Play	.003 in. T.I.R.
Rotational Life [1]	2,000,000 shaft revolutions
Stop Strength	96 oz.-in. maximum
Ganging	2 cups maximum
Torque	0.6 oz.-in. maximum Add 75% for additional cup
Weight	Approximately 1.0 oz.
Terminals	Gold-plated solder lugs
Markings	Manufacturer's name and part number, resistance value and tolerance, linearity tolerance, wiring diagram, and data code.

NOTES:

[1] Consult manufacturer for complete specification details for resistance below 200 ohms and above 125K ohms.

Specification Note: Closer performance tolerances can be supplied upon request.

Specifications are subject to change without notice.

STANDARD RESISTANCES

Resistance (ohms)	Part Number*	Resolution (percent)

MODEL 3540

⅞" DIAMETER 10-TURN BUSHING MOUNT WIREWOUND ELEMENT

PRECISION POTENTIOMETER

BOURNS®

FEATURES

- *Small size: extends ¾" behind panel*
- *High performance at low cost*
- *Unique, rugged, mechanically locked construction*
- *Direct terminal-to-element, SILVERWELD® bond eliminates vulnerable multi-joint connections*
- *Linearity: 0.25%*
- *Temperature Range: —55°C to +125°C*
- *NEW! Factory options available:*
  - *2 section unit with single or concentric shafts*
  - *Anti Rotation Lug*

STANDARD SPECIFICATIONS

ELECTRICAL CHARACTERISTICS

Resistance Range	100 ohms to 100K ohms
Resistance Tolerance	±5%
Linearity (Independent)	±0.25%
Resolution	See Standard Resistance Table
Effective Electrical Angle	3600° (+10°/—0°)
Absolute Minimum Resistance	1.0 ohm or 0.1%, whichever is greater
Noise	100 ohms ENR maximum
Power Rating	
70°C	2.0 watts
125°C	0 watt
Second Section (-135 or -468)	1.5 watts at 70°C
Dielectric Strength	MIL-R-12934
Sea level	1000 volts AC minimum
Insulation Resistance 500 volts DC	1000 megohms minimum

ENVIRONMENTAL CHARACTERISTICS

Temperature Range	—55°C to +125°C
Temperature Coefficient of Wire 1	20 ppm/°C maximum
Vibration	MIL-R-12934, 15G
Wiper Bounce	0.1 millisecond maximum
Shock	MIL-R-12934, 50G
Wiper Bounce	0.1 millisecond maximum
Load Life	MIL-R-12934, 1000 hours
Resistance Shift	2.0% maximum

MECHANICAL AND PHYSICAL CHARACTERISTICS

Mechanical Angle	3600° (+10°/—0°)
Shaft Runout	.003 in. T.I.R.
Lateral Runout	.005 in. T.I.R.
Pilot Diameter Runout	.003 in. T.I.R.
Shaft End Play	.010 in. T.I.R.
Shaft Radial Play	.003 in. T.I.R.
Rotational Life 1	1,000,000 shaft revolutions
Stop Strength	75 oz.-in. minimum
Torque	0.5 oz.-in. maximum
Weight	Approximately .75 oz.
Terminals	Gold-plated solder lugs
Markings	Manufacturer's name and part number, resistance value and tolerance, linearity tolerance, wiring diagram, and date code.

NOTES:

1 Consult manufacturer for complete specification details, for resistance below 200 ohms.

Specification Note: Closer performance tolerances can be supplied upon request.

Specifications are subject to change without notice.

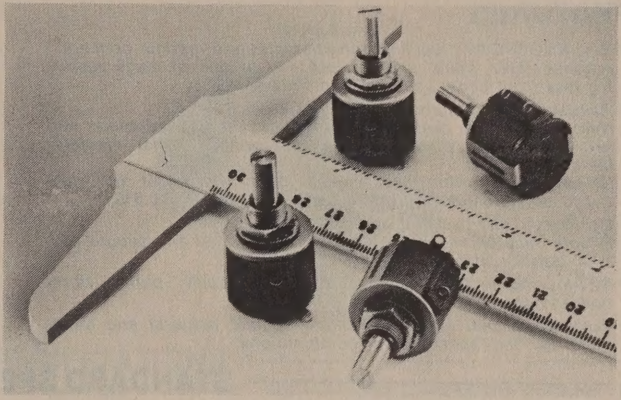
MODEL 3541

10-TURN, HYBRITRON™ POTENTIOMETER
⅞" DIAMETER, BUSHING MOUNT

PRECISION POTENTIOMETER
BOURNS®

FEATURES

- *HYBRITRON™ conductive plastic-on-wirewound element*
- *Compact size: ⅞" diameter, ¾" depth*
- *Rotational life: 5,000,000 shaft revolutions*
- *Rugged, mechanically locked construction*
- *Linearity: 0.25%*
- *Temperature range: —55°C to +125°C*
- *Options available include: 2 section unit with common or concentric shafts and anti-rotation lug*
- *Temperature coefficient ±100 ppm*



Bourns has wedded the best features of both wirewound and conductive plastic resistance elements in a new composite we call HYBRITRON™. The result is a precision potentiometer with exceptionally long life and infinite resolution . . . PLUS a low temperature coefficient and good stability. This hybrid element is used in Bourns new Model 3541 10-turn unit.

The 3541 employs Bourns exclusive SILVERWELD® direct, terminal-to-element bond for the ultimate in reliability.

MODEL 3600

PRECISION POTENTIOMETER

BOURNS®

KNOBPOT® POTENTIOMETER ¾" DIAMETER 10-TURN BUSHING MOUNT WIREWOUND ELEMENT

FEATURES

- *New KNOBPOT® precision potentiometer and readout concept.* Potentiometer, knob, and readout dial in one package requiring less front panel space than most dials alone.*
- *Readability, Repeatability, and Phasing.*
  New clock face readout provides excellent readability and setting accuracy previously available only in larger diameter dials.
  (Repeatability, within 0.1% voltage ratio. Phasing of dial readout to potentiometer performed at factory within ±0.5%).
- *Mounting: Only two drill holes required.*
  Simple installation—place unit in drilled panel and secure with lockwasher and nut.
- *Self-locking feature provides excellent stability during vibration and shock.*
- *Customized Dial Face Capability—Special numeral and increment marking, special color combinations.*

MODEL 3610

PRECISION POTENTIOMETER

BOURNS®

DIGITAL KNOBPOT® POTENTIOMETER 7/8" DIAMETER, 10-TURN, SNAP-IN MOUNTING WIREWOUND ELEMENT

FEATURES

- *Integral digital readout, knob and potentiometer.*
- *The high accuracy of this model is enhanced by excellent visual readability. Numbers are as easy to read as those on much larger readout devices.*
- *Saves space 2 ways: a small diameter of only 7/8", an extension behind the panel of less than 7/8".*
- *Guaranteed accuracy: a premounted, prephased assembly with maximum possible error between electrical output and dial reading specified at ±.5% for all resistances. This error is the combination of terminal base linearity and dial accuracy.*
- *Simple to install: new snap-in mounting cup saves time and labor and provides a shock-resistant mounting.*
- *Recessed lens offers protection from breakage, especially during installation.*
- *Specials, such as custom knobs, readout faces, higher accuracies and a handy removal tool are readily available. Consult any Bourns sales office.*

Life	100,000 button operations/decade
Weight	Approximately .78 oz.
Terminals .11 wide x .016 thick	Tinned solder lugs for 3 #20 AWG wires
Marking	Manufacturer's name, wiring diagram, part number, resistance value, date code
Readout Marking	11 positions, left and center digits 0-9-9; right digit 0-10

1 A momentary decrease of 1% in total resistance occurs only when the least significant digit is transferred directly between the 0 and 10 positions.

Specification Note: Closer performance tolerances can be supplied upon request.

Specifications are subject to change without notice.

STANDARD RESISTANCES

Resistance (Ohms)	Part Numbers**
1,000	3680S-1-102
2,000	3680S-1-202
5,000	3680S-1-502
10,000	3680S-1-103
100,000	3680S-1-104
1,000,000	3680S-1-105

** The last three digits of the part number represent the resistance in standard code. For special resistances & functions, consult factory.

If you're designing panels with precision data entry or set-point controls, consider the BOURNS Model 3680 KNOBPOT® Digital Potentiometer . . . another innovative product from Bourns.

The 3680 integrates a precision incremental decade potentiometer with an easy-to-read digital display, AND a speedy pushbutton control action. It is handsome, accurate, and a "snap" to install.

Everything is INSIDE the Model 3680 . . . no resistors or mini-PC boards are required . . . nothing clutters the back of the unit to steal precious space.

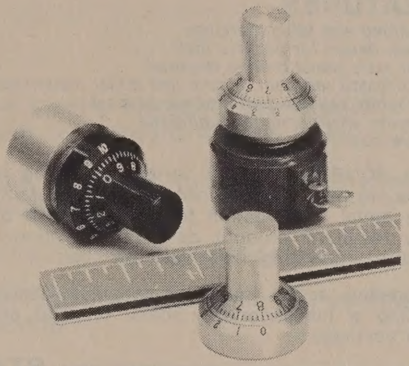
MODEL H-700

TURNS COUNTING DIAL
¾″ DIAMETER, 10-TURN

BOURNS®

FEATURES

- *Markings are machine engraved*
- *Cam detent for positive lock*
- *No extra panel drilling required*
- *Corrosion resistant, all-metal construction assures reliable performance in rugged environmental applications*



SPECIFICATIONS

MECHANICAL AND PHYSICAL CHARACTERISTICS

Number of Turns 10
Dial Divisions 50
Readability-Ten Turns .1 Part in 500
Torque—Running, While Mounted . . .2.0 oz.-in. maximum
Markings . . . . .H-721 White On Black Background
H-771 Black On Aluminum Background
Set Screw Tightening Torque . . . . . . .2.0 in. lbs. maximum

Specification Note: Closer performance tolerances can be supplied upon request.

Specifications are subject to change without notice.

ENVIRONMENTAL CHARACTERISTICS

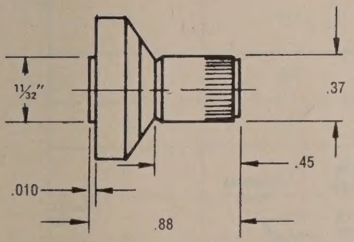
Operating Temperature Range . . . .−15°C to +85°C
Mechanical Life . . . . .10,000 cycles
Humidity-No Damage . . . . .96 hours @ 95% RH

SHAFT AND BUSHING REQUIREMENTS

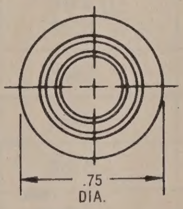
Shaft Extension Beyond Panel . . . . .600 minimum
.800 maximum
Bushing Extension Beyond Panel . . . . .225 maximum
(Including Shaft C Ring where applicable)

PART NUMBER	BODY FINISH	BRAKE	SHAFT DIA.
H-721	BLACK	NO	⅛″
H-771	CLEAR	NO	⅛″

DIMENSIONS



TOL. ±.015

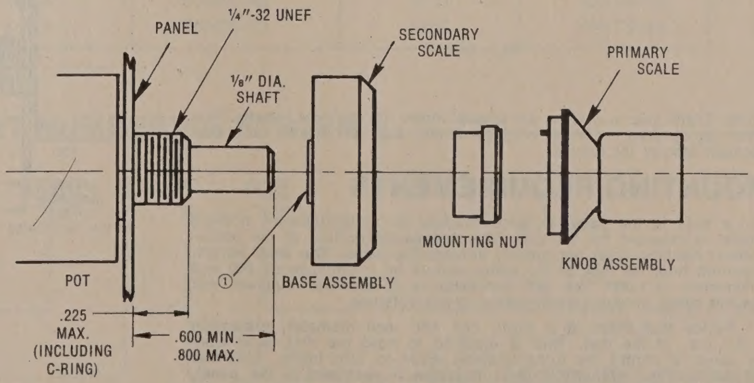


Note: Dials also available on special order for 3/32″ dia. shafts. They may be ordered in black or clear finish. Consult factory for details.

MOUNTING REQUIREMENTS

Drill a hole in the panel to accommodate the potentiometer; nothing special is required for the dial. The unthreaded portion of the potentiometer bushing must not project through the panel. The shaft length, measured from the face of the panel, should be a minimum of .600 and a maximum of .800. The .600 dimension is an absolute minimum and in some cases optimum performance is not obtained.

1 Notice that there is a short, 11/32″ diameter, projection at the rear of the dial. This is required to hold the dial away from the panel to permit the turns-counting scale to turn freely. This dial will not function properly if this projection can fall through the panel. Suggested panel hole diameter is .281.



BOURNS INC TRIMPOT PRODUCTS DIVISION
1200 COLUMBIA AVENUE/RIVERSIDE, CALIFORNIA 92507/PHONE 714 781-5122

MODEL H-1400

TURNS COUNTING DIAL
1" DIAMETER, 10-TURN

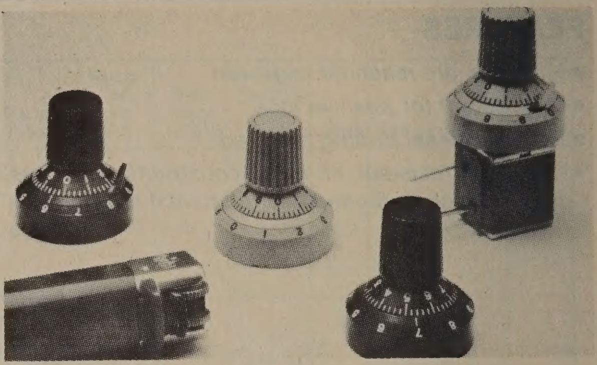
BOURNS®

FEATURES

- *Molded and filled markings*
- *Cam detent for positive lock*
- *No extra panel drilling required*
- *Corrosion resistant, plastic and metal construction*
- *Smooth, reliable performance in most severe environmental conditions*
- *Low cost*

The BOURNS® H-1400 series of analog turns counting dials are precision engineered and manufactured of plastic and metal construction for best balance of quality/cost. The resultant product delivers exceptional smoothness, accuracy and long life at very low cost.

A positive action transfer mechanism assures perfect indexing of the secondary scale. Transfer points are quiet and accurate.



STANDARD SPECIFICATIONS

MECHANICAL AND PHYSICAL CHARACTERISTICS

Number of Turns	10
Dial Divisions	50
Readability—Ten Turns	2 parts in 1000
Torque—Running, While Mounted	2.0 oz.-in. maximum
—With Brake Engaged	5.0 oz.-in. minimum
Markings	(H-1411, H-1412, H-1421 & H-1422) White on Black Background (H-1461, H-1462, H-1471 & H-1472) Black on Gray Background

HIGH PRECISION POTENTIOMETERS

PRECISION ROTARY PRODUCTS
BOURNS®

CUSTOM PRECISION POTENTIOMETERS

Bourns also produces a wide variety of precision potentiometers for exacting applications in industrial and military markets. These models are specifically designed for extensive custom modifications to fit a broad range of unique applications. They include:

1. B-LINE™ single-turn precision potentiometers with aluminum housing. Potentiometers in this series are in diameters of ⅞″, 1 1/16″ and 2″, bushing or servo mount. Wire-wound, and conductive plastic elements are available in each size — 12 standard models in all.
2. Single-turn precision potentiometers with plastic housing.
3. Servo-mount multi-turn potentiometers.
4. Non-linear function potentiometers, available in most models.

CARTER POTENTIOMETERS

RECTILINEAR / WIRE WOUND / CONDUCTIVE PLASTIC

Carter Manufacturing Corp. is an organization of engineers and craftsmen specializing in the unusual in potentiometers and switch engineering and their manufacture. Since our founding in 1955 we have developed full capability in wire wound and conductive plastic potentiometers. We welcome the opportunity to work with you for your unique requirements as well as standard commercial or mil types.

Carter manufactures many custom variations of rectilinear potentiometers. When requesting quotations please specify stroke, resistance, linearity, any taps, any switching, environmental requirements and quantity.

Wire wound and conductive plastic elements can also be furnished for special requirements.

GENERAL SPECIFICATIONS

Resistance Tolerance: WW ±5%, C/P ±10% Std. (Spl. avail.).

Function Angles: Spl. available.

Rotation: WW with stops, continuous available.
C/P continuous, stops available.

Taps: WW taps to single turn of wire with positive elimination of failure.
C/P taps of low resistance or zero width available.

Power Rating: To zero watts at 150°C.

Ambient Temp.: −65°C to +125°C std. (to 150°C available).

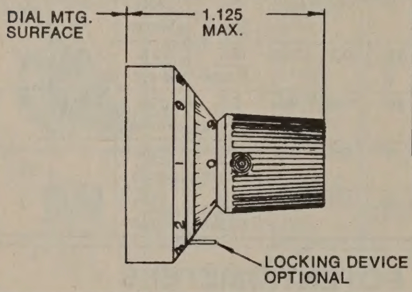
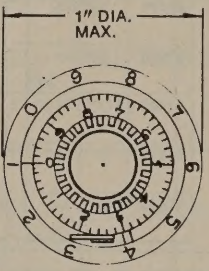
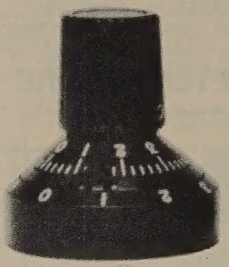
CLAROSTAT NEW PRODUCTS

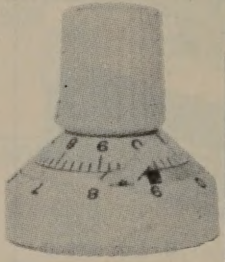
ECONOMY MODEL CLARODIALS SERIES 1400 TEN TURN CONCENTRIC SCALE DIALS

Newest member of the popular Clarodial family of concentric dials for multi-turn potentiometers is the Series 1400. Requiring only one inch of panel space, the Series 1400 is offered in the more economical molded plastic construction at substantial savings. Performance parameters of the Clarodial 400 Series are met or exceeded by the Series 1400. Available in colors black or gray, with or without brake.









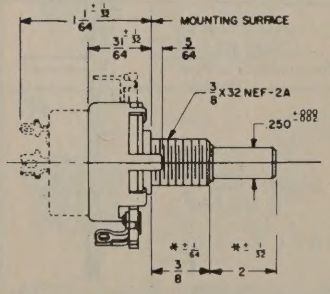
Material	Plastic
Color	Black or Gray
Backlash	Zero

DESCRIPTION

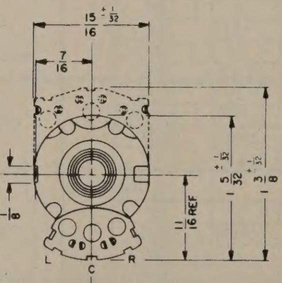
Cat. No.	Description
1411	Commercial, 10 Turn, Black, Plastic ¼" Shaft, No Lock
1412	Commercial, 10 Turn, Black, Plastic ¼" Shaft, With Lock
1461	Commercial, 10 Turn, Gray, Plastic ¼" Shaft, No Lock
1462	Commercial, 10 Turn, Gray, Plastic ¼" Shaft, With Lock

0.5 WATT/SPECIAL ORDER SERIES 470

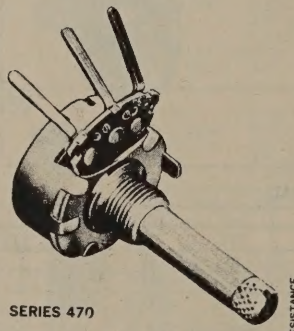
Series 470 is an extremely versatile family of high-quality potentiometers. Its multiple configurations and adaptability to any mounting requirements have established its wide use in industry. Particularly, the Series 470 is applicable to radio, television instrumentation and audio work where low noise, close linearity and long rotational life are required. The Series 470 offers a reliable, homogeneous and strain-free conductive plastic resistive element with 2% dynamic noise and 5% independent linearity.



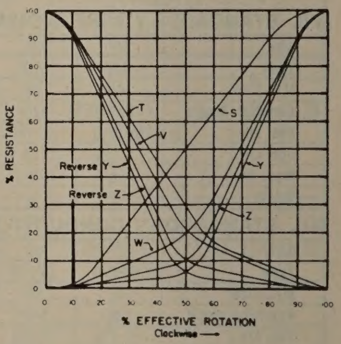
Typical dimensions for Series 470



Many variations available



SERIES 470



Resistance Range: 150 Ohms to 5 megohms linear; 1K Ohms to 2.5 megohms tapered. **Resistance Tolerance:** Linear up to 550K Ohms, ±10%. Above 500K Ohms, ±20%, Tapers up to 100K Ohms, ±10%, Above 100K Ohms, ±20%. **Linearity:** ±5% Independent. **Power Rating:** Linear—0.5 watts at 40°C., Tapered −0.25 watts at 40°C., Ganged—Panel section is ¾ of single section rating and each additional section is ⅔ of single section rating. Full rating at 40°C derated linearly to zero watts at 120°C. **Electrical Rotation:** 300° ±5° with and without switch. **Tapers:** Right and left hand available. See Chart A. **End Resistance:** Linear Units; 4 Ohms maximum for total resistances up to 250K Ohms, 10 Ohms for resistances 250K Ohms and above. **Dielectric Strength:** 1000 Vac for 60 Seconds at 760 mm Hg., 450 Vac for 60 Seconds at 86 mm Hg. **Working Voltage:** 500 Vdc maximum but power not to exceed rating. **Noise:** 2% of total resistance. 1% available. **Insulation Resistance:** 50 megohms minimum. **Mechanical Rotation:** 300° ±5° without switch, 330° ±5° with switch, standard. **Stop Torque:** 8 lb.-in. minimum, Standard, 10 lb.-in., minimum, Special. **Operating Torque Range:** Standard bushing each section 0.5 to 6 oz.-in. High torque 6 to 20 oz.-in. Locking bushing 30 oz.-in. minimum with jam nut tightened to 10 lb-in. **Weight:** .069 lb. **Life:** 50,000 cycles (500 cycles locking bushing types) 10 cycles per minute maximum. **Operating Temperature Range:** −55°C to +120°C. SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE. Note: The Series 470 is available on special order only.

CLAROSTAT CERMET POTENTIOMETERS

BUSHING MOUNTED

1/2" SQUARE MODULAR 1 WATT

SERIES 389

The series 389 is a completely new potentiometer with characteristics exceeding those costing many times more. Manufactured in a controlled environment, the process includes exclusive Clarostat TempMaturing™ to insure a reliable, homogeneous and strain-free resistance element. The modular design allowing free interchange of resistive elements. These potentiometers are manufactured to meet MIL-R-94C specifications where applicable.

*For complete catalog number add resistance value from chart between N- and -Z.

BUSHINGLESS PC MOUNTED

1/2 WATT SERIES 389-5

CAT. NO. 389-5 and 389-5-Z

The potentiometer 389-5 and 389-5-Z are similar in characteristics to the 389 Series (see above). However, they are designed for bushingless mounting on a PC board and have a flush screwdriver slot for adjustment. Check the appropriate specifications for the 389 series. Note that 389-5 and 389-5-Z have power ratings of 0.5 watt at 85°C.

388N	Plain Bushing. (¾" FMS screwdriver slot shaft with ¼" plain bushing)
388L	Locking Bushing. (7/16" FMS slotted shaft with 3/8" split bushing)

KIT AVAILABLE: The 'A' kit, a versatile prototype kit featuring a wide variety of assemblies, is now available. Write for complete details.

THE "A KIT" BY CLAROSTAT

NEW

The all new, prototype-oriented "A Kit" provides an economical answer to many breadboarding problems. Parts, individually packaged and identified to simplify selection and reordering. Assembles up to 30 single or dual Series 388 modular potentiometers for either panel-mount or printed circuit applications. The Series 388 module is ½" square and designed for mounting on a .100" grid; suitable for DIP insertion. Control element is rated .5 watts at 70°C. **Resistance Tolerance:** ±10%. **Independent Linearity:** ±5%. Each module contains a popular resistance value, ranging from 100 ohms to 2.5 megohms. Element is constructed of conductive plastic for extremely quiet performance. The "A Kit" contains shafts, bushings, lubricant, an assembly jig, pliers, screwdriver, and an assembly manual.
Clarostat "A Kit" — Net Each **$89.95**

LOCKING BUSHING TYPE

Series RV6 are high-resolution, highly stable potentiometers for applications requiring miniaturization and reliability. Test equipment, industrial instrumentation, military communications and missiles are some of the areas in which this series meets requirements successfully. Commercial version is Series 382 available on special order. Military version Type 63C.

SPECIFICATIONS

Resistance Tolerance: ±10%. **Power Rating:** 0.5 watt at 70°C. Derated to zero power at 120°C. **Electrical and Mechanical Rotation:** 295° ±5°. **End Resistance:** 5Ω max. up to 750Ω. 10Ω max. above 750Ω. **Functional Output:** Linear. **Dielectric Strength:** 750 Vac for 60 Seconds at ATM. 350 Vac for 60 Seconds 3.44 in. Hg. **Working Voltage:** 350 Vdc maximum, but power not to exceed rating.

Cat. No.	Description
381N	Bushing, Plain, ¼" long. Shaft, ¾" long. FMS SD slotted.
381NS	Bushing (same as 381N) but equipped with a factory attached SPST switch. 1a, 125V (ac or dc).
*381N-Z	Bushing—Z-Taper (see pg. 2484)
381L	Locking Bushing, 3/8" long. Shaft, 7/16" long. FMS screwdriver slotted.
D381N	Dual ganged Bushing and shaft same as 381N.

*Note: Insert Resistance value between N and Z for complete Catalog No. eg. 381N-10K-Z.

Series 381, The "Quiet One" is a completely new potentiometer with characteristics exceeding those costing many times more. Manufactured in a controlled environment, the process includes exclusive Clarostat Temp-Maturing(TM) to insure a reliable, homogeneous and strainfree resistance element with 1% dynamic noise and 5% independent linearity. Precision-machine finishing of mechanical parts ensures smoother operation and outstanding mechanical life. Series 381 Potentiometers manufactured to MIL-R-94 specification.

SPECIFICATIONS

Resistance Tolerance: Linear, up to 500KΩ ±10%, above 500KΩ ±20%. Tapers, up to 100KΩ ±10%, above 100KΩ ±20%. **Power Rating (Watts):** 1 watt maximum continuous power rating for linear taper, but voltage not to exceed rating. Full rating at 70°C, derated linearly to zero watts at 120°C. Derate all non-linear tapers by multiplying wattage rating by 0.5. **Mechanical and Electrical Rotation:** 300° ±5° without switch, 325° ±5° with switch. **Dynamic Noise:** Linear single controls maximum initial noise level of 1% of total resistance. Measurement made using a constant current source and oscilloscope detection technique. **Linearity:** ±5% Independent. **Working Voltage:** 350 Vdc across end terminals, but power not to exceed rating. **Effective Rotation:** 270° +0° −10°. **Tapers:** Yes. **Dielectric Strength:** 1,000 VAC for 60 Sec. ATM. **Torque Range:** 0.2-6 oz.-in. **Stop Torque:** 6 lb. min. **Weight:** .017 lb. typical. **Functional Output:** Linear or Taper (see Catalog No's.). **Insulation resistance:** 1,000 Meg Min. **Corrosion Resistant:** Yes.

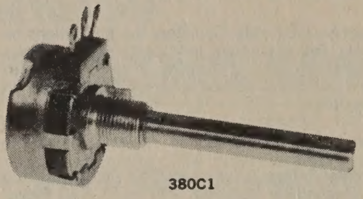
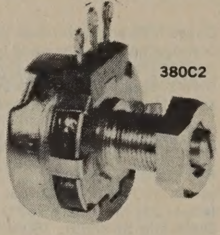
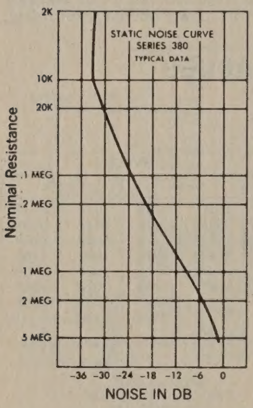
LOW NOISE, LONG LIFE 2 WATT—SERIES 380

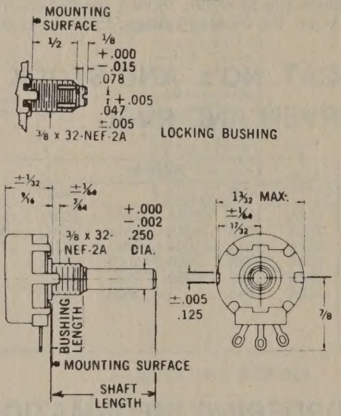


380C1



380C2





Cat. No.	Description	Cross Reference	
		Ohmite	Allen-Bradley
380C1	2" round shaft FMS; 3/8" long bushing with 3/8 x 32-NEF-2A thread.	CU	JAIN200P
380C2	5/8" screwdriver slotted shaft FMS; with a 1/2" split locking bushing.	CLU	JAIL040S
380C3	7/8" screwdriver slotted shaft FMS; 3/8" long bushing with 3/8 x 32-NEF-2A thread.	CMU	JAIN056S

Like the Series 381 the Series 380 is a "Quiet One". A completely new potentiometer with characteristics exceeding those costing many times more. Manufactured in a controlled environment, the process includes exclusive Clarostat Temp-Maturing(TM) to insure a reliable, homogeneous and strainfree resistance element with 1% dynamic noise and 5% independent linearity. Precision-machine finishing of mechanical parts ensures smoother operation and outstanding mechanical life. Series 380 Potentiometers manufactured to exceed MIL-R-94 specifications. Series 380 C-line Potentiometers feature stainless steel shafts.

SPECIFICATIONS

Resistance Tolerance: Up to 1 Megohm ±10%, above 1 Megohm ±20%. **Electrical and Mechanical Rotation:** 312° ±3°. **Effective Rotation:** 270° –0° +10°. **End Resistance:** 4Ω maximum for total resistances up 250K, 10Ω for resistances 250K and higher. **Dielectric Strength:** 1000 Vac for 60 Seconds at ATM pressure. 450 Vac for 60 Seconds 3.4 in. Hg. **Working Voltage:** 500 Vdc across end terminals, but power not to exceed rating. **Power Rating:** 2 watts at 70°C. **Shaft Material:** Stainless steel. **Torque Range:** 1-4 oz.-in. **Operating Temp.:** −55°C to +120°C. **Stop Torque:** 12 lb. in min. **Weight:** .072 lb. (typical). **Functional Output:** Linear. **Insulation Resistance:** 100 Meg. min. **Dynamic Noise:** Linear single controls maximum initial noise level of 1% of Rt. Measurement made using a constant current source and oscilloscope detection technique. **Static Noise:** See Chart. **Linearity:** ±5% Independent. **Voltage Coefficient:** .005%/Volt. maximum. **Rotational Life (Standard):** Rotational life for linear control; 100,000 cycles for units up to and including 100,000 Ohms, except locking type bushing, change not to exceed 5%ΔR, above 100,000 Ohms change not to exceed 10%ΔR.

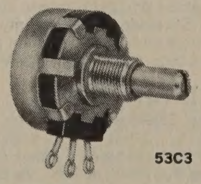
53C2



53C3

Cat. No.	Description
53C1	2" round shaft FMS; 3/8" long bushing with 3/8 x 32-NEF-2A thread.
53C2	5/8" screwdriver slotted shaft FMS; with a 1/2" split locking bushing.
53C3	7/8" screwdriver slotted shaft FMS; 3/8" long bushing with 3/8 x 32-NEF-2A thread.
53C1SW	Unsealed version of 53C1 available for use with field assembled switches. Order as 53C1 SW see table 1 for switch ordering.
53C1-Z	Same as 53C1 but with Z taper (see chart pg. 2484)
53C1-RZ	Same as 53C1 but with Reversed Z taper (see chart pg. 2484)
D53C1	Dual ganged. Bushing and shaft same as 53C1.
RV4N	MIL equivalent of Series 53 with plain bushing (see table next page).
RV4L	MIL equivalent of Series 53 with shaft lock bushing (see table next page).

	TABLE 1 SWITCHES FOR 53C1 SW ONLY
Cat. No.	Description
53-10	SPST—3A-125 Vac
53-20	DPST—3A-125 Vac
53-21	(Mod.) DPST—3A-125 Vac/dc

A 2-watt potentiometer totally enclosed and sealed against moisture and other environmentals. Meets the need for a high quality resistance device incorporating high-stability under extreme climatic and operational conditions. 1-1/16" diameter and 9/16" deep, brass nickel plated shaft, bushing and stainless steel cover. Terminals, hot tinned.

SPECIFICATIONS (Dimensions same as Series 380)

Resistance Tolerance: Up to 1 megohm ±10%, above 1 megohm ±20%. **Electrical and Mechanical Rotation:** 312° ±3° without switch, 333° ±3° with switch. **End Resistance:** Per MIL-R-94. **Working Voltage:** 500 Vdc across end term, but power not to exceed rating. **Fabricated in accordance with MIL-R-94 Style RV4.** Items not listed are special, prices and information supplied upon request. **Effective Rotation:** 270° −0° +10°. **Dielectric Strength:** 1,000 VAC, 60 Sec. ATM. **Rotational Life:** 25,000 Cycles. **Power Rating:** 2 watt at 70°C. **Torque Range:** 1-4 oz.-in. **Operating Temp.:** −55°C to +120°C. **Stop Torque:** 12 lb.-in. **Weight:** .072 lb. **Functional Output:** Linear. **Insulationg Resistance:** Per MIL-R-94C. **Corrosion Resistant:** MIL-R-94C.

B	1/2	—
D	7/8	7/8
G	1-1/4	—
J	2	—
K	2-1/2	—

ORDERING INFORMATION (RV4)

RV4 N A Y SD 10 4 A

STYLE
See above

BUSHING
N - Standard
L - Locking
S - Shaft & panel seal
T - Locking, SH. & panel seal

SWITCH
A - None

TEMPERATURE & MOISTURE RESISTANCE CHARACTERISTICS

Max. Ambient Oper. Temp.	Max. Resistance Change due to humidity test.	Min. Insulation Resistance during humidity test.
Y 120°C	±10%	100 Meg Ω

OPERATING SHAFT
The 1st letter indicates style; the 2nd letter, length from mounting surface. See chart "C".

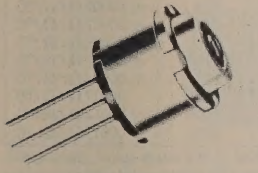
RESISTANCE (Ohms)
First two digits are significant and the last one is the number of zeroes that follow.

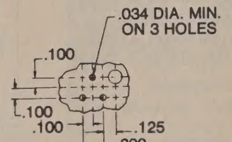
RESISTANCE CHARACTERISTIC & OVERALL RESISTANCE TOLERANCE
A linear ±10%
B linear ±20%
C - * C.W. ±10%:
D - * C.W. ±20%:
E - * C.C.W. ±10%:
F - * C.C.W. ±20%:
*10% Res. @ 50%.

Other RV4 types not listed available on extended delivery basis.

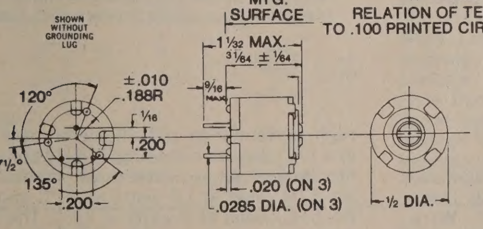
BUSHINGLESS PC MOUNTED

LOW NOISE, HIGH STABILITY .25 WATT SERIES 382-5





RELATION OF TERMINALS TO .100 PRINTED CIRCUIT BOARD



Cat. No. 382-5 is designed specifically for application on printed circuit boards, this new configuration permits extremely close board-to-board spacing.
